APPENDIX R
WELL SITES EVALUATION

Technical Memorandum

To: Mr. Mike Cho
TRG Land, Inc.

From: Thomas Harder, P.G., C.HG.
Thomas Harder & Co.

Date: 26-Aug-19

Re: Evaluation of Potential Well Sites for the Chadwick Ranch Estates

1 Introduction

This technical memorandum (TM) summarizes the results of Thomas Harder & Company's (TH&Co's) evaluation and ranking of five potential well sites located in the San Gabriel Valley Groundwater Basin near Duarte, California in Los Angeles County. The siting study focused on potential sites that could accommodate a new well to be used as a water source for the proposed Chadwick Ranch Estates development in Bradbury, California (see Figure 1). The well siting analysis was focused on potential sites within Cal American Water's Duarte service area as the proposed development will be served by them.

1.1 Purpose and Scope

The purpose of this investigation was to identify and rank five sites for their potential as production well sites. This TM presents the data, criteria, methodologies, and results for the site rankings and recommendations for future test drilling.

The scope of work consisted of:

- Obtaining and reviewing background data including groundwater elevation records, estimation of aquifer thickness, pumping test data, potential sources of groundwater contamination, aerial photographs of the Study Area, and parcel information.
- Identifying five potential sites for further investigation.
- Conducting site visits to each of the five sites.

- Ranking of the five potential well sites.
- Providing a recommendation for future drilling.
- Preparing this TM summarizing the findings.

1.2 Study Area

The Study Area was selected to be completely within Cal American Water's Duarte service area as shown on Figure 1. The Study Area is primarily south of Bradbury and west of the 605 Freeway. Land use in the area generally consists of urban residential areas, schools, commercial businesses and parks. Identification of potential well sites focused on vacant land, public properties or large undeveloped lots with available open space.

2 Hydrogeological Setting

The San Gabriel Valley Groundwater Basin (the Basin) is a structural basin filled with permeable alluvial deposits, underlain by relatively impermeable rock. It is located in eastern Los Angeles County and includes the water-bearing sediments underlying most of the San Gabriel Valley. The sediment that makes up this basin consists primarily of unconsolidated to semi-consolidated alluvium deposited by streams flowing out of the San Gabriel Mountains (see Figure 2). These alluvial sediments make up the primary aquifer system that supplies groundwater to most of the production wells in the area.

The bedrock underlying the alluvium consists of consolidated basement rocks of the San Gabriel Mountains[1]. The nonwater-bearing formations include igneous and metamorphic rocks. Although considered nonwater-bearing, wells drilled into them may intersect fractures containing water and can produce up to 15 gallons per minute (gpm)[2].

A major northwest/southeast trending fault system is located at the base of the San Gabriel Mountains near the Chadwick Ranch Estates (see Figure 2). The primary fault in this system is the Sierra Madre Fault but it also includes the Duarte Fault, which is approximately 0.5-mile south and parallel to the Sierra Madre Fault. These faults act as groundwater flow barriers, impeding groundwater flow from the base of the mountains into the alluvial groundwater basin. Further, the low permeability nature of the sediments at and near the faults restricts well yields. Accordingly, it is advantageous to locate well sites away from the fault traces in order to maximize potential well yield.

[2] Stetson Engineers, Inc, 2016. San Gabriel Valley Groundwater Basin Salt and Nutrient Management Plan. Prepared for the Main San Gabriel Basin Watermaster, Revised November 2016.

2.1 General Aquifer Characteristics

Alluvial sediments in the Study Area generally consist of sand, gravel, and boulders with some interbedded silt. Based on a review of the California Department of Water Resources (DWR) Driller's Log[3] for Buena Vista Well No. 2, which is located less than a mile from the potential sites, the subsurface sediments in this area consist primarily of sand, rock and gravel from ground surface to approximately 730 ft bgs (see Attachment A).

Where saturated in the subsurface, the permeable alluvium forms the aquifer that supplies water to wells. A pumping test of a well on the west side of the San Gabriel River at Huntington Drive was conducted at 3,500 gallons per minute (gpm) with 53 ft of drawdown after 28.5 hours (see Attachment A). The Buena Vista Well, located south of Interstate 210 and west of Interstate 605, yielded approximately 2,240 gpm during pumping tests in 2011. The Lemon Well, located north of Interstate 210 on the southwest border of Bradbury city limits, had a well yield of approximately 380 gpm in 2016, as determined from the Driller's Log (see Attachment A). Therefore, it is anticipated that wells south of the 210 freeway are anticipated to have greater potential well yield than wells north of the freeway.

2.2 Groundwater Occurrence and Flow

Groundwater level elevations have not changed from 2014 to 2019 in the Study Area. Based on a 2014 groundwater elevation contour map, groundwater generally flows in southwest direction[2]. Depth to groundwater beneath the potential sites is estimated to range from approximately 240 to 340 ft bgs, based on 2018-2019 simulated groundwater levels from the Main San Gabriel Basin Watermaster[4].

2.3 Groundwater Quality

Groundwater quality within the Study Area is anticipated to be relatively good with respect to total dissolved solids (TDS) and nitrate concentrations. TDS concentrations in groundwater from area wells ranged from approximately 250 to 500 milligrams per liter (mg/L) in 2011-2012[2], which is less than the secondary maximum contaminant level (MCL) for TDS of 500 mg/L. Nitrate concentrations in groundwater from wells ranges from approximately 2 to 25 mg/L, as reported in 2011-2012 (nitrate reported as nitrogen). Nitrate is likely associated with historical agriculture in the area and higher concentrations will be detected in the shallower aquifer system. Isolated zone testing will be an important aspect of the well drilling process to

[3] California Department of Water Resources (DWR) Well Completion Report Map Application. https://dwr.maps.arcgis.com/apps/webappviewer/index.html?id=181078580a214c0986e2da28f8623b37. Accessed 2018-2019.
[4] Stetson Engineers, Inc. Prepared for Main San Gabriel Basin Watermaster, Simulated 2018-19 Basin Groundwater Contours, Figure 18. https://docs.wixstatic.com/ugd/af1ff8_5c0ffdec3be548f6acef9e6ddaf92428.pdf

ensure that the well is designed with a perforation interval below the shallow zones of high nitrate.

In addition to general water quality issues, there are a number of previously identified sources of groundwater contamination in the vicinity of the Study Area (see Figure 3). Possible point-sources of contamination were identified using the State Water Resources Control Board (SWRCB) Geotracker[5] website. Various potential contaminating activities in the Study Area include, but are not limited to, permitted underground storage tanks (USTs), land disposal sites, and closed Leaking Underground Storage Tank (LUST) cleanup sites, as shown on Figure 3. The constituents of concern at these sites are primarily associated with gasoline and oil.

Volatile organic compounds (VOCs) have also been detected in groundwater in the Study Area. There are multiple Superfund National Priority List (NPL) Sites in the San Gabriel Valley Groundwater Basin[2]. NPL Sites are hazardous waste sites eligible for long term remedial action (cleanup) financed by the federal Superfund program. The NPL site closest to the Study Area is located in the city of El Monte in the western portion of the Study Area (see Figure 3). The VOCs associated with this site include Trichloroethylene (TCE), Perchloroethylene (PCE) and Carbon Tetrachloride[6]. For wells sites in the western portion of the Study Area, isolated aquifer zone testing that includes testing for VOCs will be critical to avoid designing the well with perforations in aquifers with high VOC concentrations.

3 Evaluation of Potential Well Sites

Based on a review of online aerial imagery, vacant parcels, and parcel ownership, TH&Co identified five preliminary site locations within the Study Area for further evaluation as potential well sites (see Figures 1 and 4. Vacant parcels were identified using Los Angeles County's parcel database (dated 2016). TH&Co gave the proposed respective Assessor's Parcel Number (APN) to TRG for review on the First American title database to determine parcel owner and property value. TH&Co visited each of the five preliminary sites on 25-Jun-19 to evaluate the following:

- Rig access from the main roads
- Levelness of the property
- Presence of overhead utilities
- Signs of underground utilities
- Site dimensions
- Nearby potential contaminant sources (e.g. sewer manholes)

The following items were noted during the site visit but were not used in the ranking and evaluation of the potential sites:

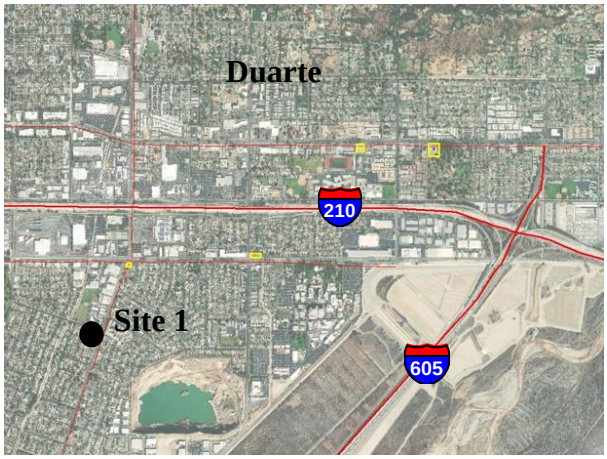
- Locations for discharge water generated during drilling
- Potential sources of water for drilling (i.e. fire hydrants)
- Need for noise control attenuation
- Amount of traffic surrounding the site

Further work to identify subsurface utilities will be necessary prior to finalizing the exact drilling location on each of the sites.

The following summarizes the evaluation of the five sites based on the site visit.

3.1 Site 1 – New Hope Church's Undeveloped Lot

Site 1 is a vacant, undeveloped parcel located at the intersection of Mountain Avenue and Euclid Avenue (see Figure 5). The parcel is privately-owned by New Hope Church of God in Christ in Duarte. The site contains adequate space for drilling rig and equipment. There are some trees on the site that might need to be removed.



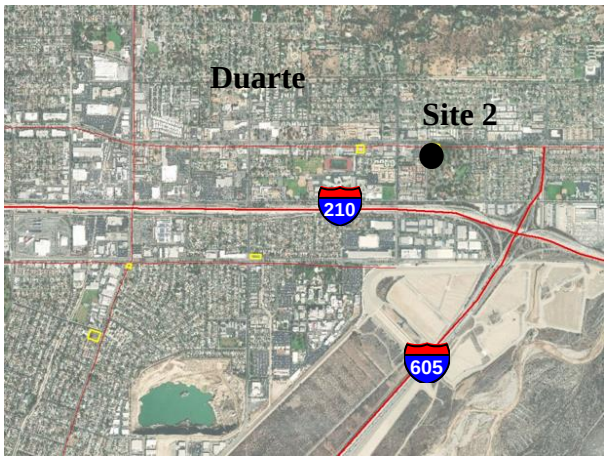
Evaluation Criteria – Site 1

Property Access/Ownership	Private Property owned by New Hope Church
Assessor Parcel Number (APN)	8521-008-047
Proximity to Existing Pipeline	Unknown
Proximity to Existing Well	Approximately 3,700 ft
Approximate Property Dimensions (Length x Width)	200 ft x 200 ft
Rig Access	Driveway from Euclid Avenue. Accessible level land. Minor site preparation might be required to remove trees (if necessary).
Observed Utilities	No overhead power lines trending across the site.
Potential Contaminant Sources	No sewer manholes observed on site.
Distance from Existing Active or Closed Clean-Up Sites	Approximately 0.3 miles away
Noise Control	Noise control (i.e. sound walls) will likely be necessary due to the surrounding residences.

Construction Water	Fire hydrant located across the street from the site on Mountain Avenue.
Traffic	Low – High (especially on weekends when church is in session)

3.2 Site 2 – Westminster Garden

Site 2 consists of a mostly vacant, undeveloped parcel owned by Westminster Gardens. Westminster Gardens is a senior living retirement community. The site is located within a residential neighborhood near the intersection of Santo Domingo Avenue and Huntington Drive (see Figure 6). The site contains adequate space for drilling rig and equipment. There are boulders and trees on site as well as unlevel land, so site maintenance will likely be necessary. A review of aerial imagery suggests this site is periodically used as a parking lot for the senior community. At the time of the site visit, there were no cars and gates were closed and locked.



Evaluation Criteria

Property Access/Ownership	Privately owned by Westminster Gardens
Assessor Parcel Number (APN)	8529-014-029
Proximity to Existing Pipeline	Unknown
Proximity to Existing Well	Approximately 1,380 ft
Approximate Property Dimensions (Length x Width)	230 ft x 270 ft

Rig Access	Driveway off of Santo Domingo Avenue through gate; Minor site maintenance may be necessary.
Observed Utilities	No powerlines extending across the site.
Potential Contaminant Sources	Sewer manhole located on Santo Domingo Avenue.
Distance from Existing Active or Closed Clean-Up Sites	Approximately 0.25 miles away
Noise Control	Noise control (i.e. sound walls) will likely be necessary due to the surrounding residences.
Construction Water	Fire hydrant located across the street from the site on Santo Domingo Avenue. Storm drain located across the street on Santo Domingo Avenue.
Traffic	Low traffic on side street, high traffic on Huntington Drive.

3.3 Site 3 – Undeveloped Lot Off of Mountain Avenue and East Duarte Road

Site 3 is a vacant, undeveloped parcel located at the intersection of Mountain Avenue and East Duarte Road (see Figure 7). The parcel is owned by the City of Duarte. The site contains adequate space for drilling rig and equipment. Some minor site preparation may be necessary to grade the site. The site dips steeply downwards from the surrounding sidewalk on the north and west portions of the site.

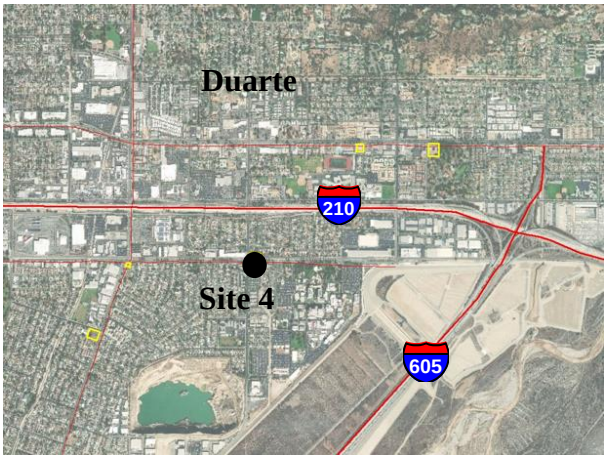
Evaluation Criteria

Property Access/Ownership	Property owned by the City of Duarte
Assessor Parcel Number (APN)	8531-017-903
Proximity to Existing Pipeline	Unknown
Proximity to Existing Well	Approximately 3,200 ft
Approximate Property Dimensions (Length x Width)	110 ft x 140 ft
Rig Access	There is no driveway into the lot but would be best to enter over the curb on Mountain Avenue. Minor site preparation may be necessary to grade the steep sides of the site.
Observed Utilities	Electrical vaults located in the sidewalk along East Duarte Road. No overhead power lines trending across the site.
Potential Contaminant Sources	Sewer manholes were not observed.
Distance from Existing Active or Closed Clean-Up Sites	Approximately 0.1 miles away
Noise Control	Noise control (i.e. sound walls) will likely be necessary due to the surrounding residences.
Construction Water	Hydrant located across the street on Mountain Avenue.
Traffic	Moderate - High (busy intersection)

3.4 Site 4 – Dura Properties' Parking Lot

Site 4 is a parking lot adjacent to the train tracks at the intersection of Buena Vista Street and East Duarte Road (see Figure 8). It is privately-owned by Dura Properties, LLC. The site

contains adequate space for drilling rig and equipment. Minor site maintenance might be necessary to remove trees and to redirect a power line trending through the site.



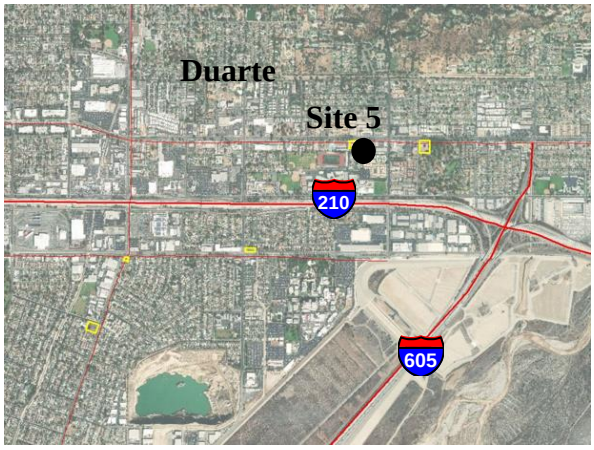
Evaluation Criteria

Property Access/Ownership	Privately owned by Dura Properties, LLC
Assessor Parcel Number (APN)	8528-005-053
Proximity to Existing Pipeline	Unknown
Proximity to Existing Well	Approximately 1,450 ft
Property Dimensions (Length x Width)	220 ft x 80 ft
Rig Access	Driveway into site off of Buena Vista Street. Minor site preparation might be required to remove trees and re-route pipeline (if necessary).
Observed Utilities	Overhead powerline ends on site. Utility building for train control on southern portion of the site.
Potential Contaminant Sources	Sewer manhole located on Buena Vista Street (at least 100 ft away)
Distance from Existing Active or Closed Clean-Up Sites	Approximately 0.05 miles away
Noise Control	Noise control (i.e. sound walls) will likely be necessary due to the

	surrounding residences.
Construction Water	Fire hydrant located at intersection of Buena Vista Street and Three Ranch Road. Storm drain located on Buena Vista Street sidewalk.
Traffic	Moderate - High (busy intersection)

3.5 Site 5 – Undeveloped Lot off Huntington Drive

Site 5 is a vacant, undeveloped parcel located off of Huntington Drive and Pops Road (see Figure 9). The parcel is owned by the City of Duarte. The site contains adequate space for drilling rig and equipment. The southern portion of the site has a berm and the western portion of the site dips down. Currently the site contains plants and trees with irrigation lines and hoses along the perimeter, so minor site preparation may be necessary to grade the site and remove any plants as deemed necessary.



Evaluation Criteria

Property Access/Ownership	Property owned by the City of Duarte
Assessor Parcel Number (APN)	8530-023-917
Proximity to Existing Pipeline	Unknown
Proximity to Existing Well	Approximately 2,250 ft
Property Dimensions (Length x Width)	140 ft x 135 ft

Rig Access	Access over the curb from Huntington Drive. Minor site preparation may be necessary.
Observed Utilities	No overhead powerlines trend along the site.
Potential Contaminant Sources	Two sewer manholes observed on Pops Road.
Distance from Existing Active or Closed Clean-Up Sites	Approximately 0.08 miles away
Noise Control	Noise control (i.e. sound walls) will likely be necessary due to the surrounding residences.
Construction Water	Fire hydrant located on site off of Huntington Drive.
Traffic	Moderate – High traffic along Huntington Drive

4 Methodology of Site Ranking

Each of the potential well sites evaluated for this study was ranked according to the following evaluation categories:

- Ease of property access
- Proximity to existing wells
- Potential well yield
- Proximity to potential contaminant sources
- Adequate space to drill the well
- Drilling rig access

Each evaluation category was assigned a subjective weighting factor (between 0.1 and 0.3) based on its relative importance to selecting a site. Evaluation categories were further assigned raw scores based on evaluation criteria that would make the site more or less favorable as a well site.

The ranking of the sites is a function of the weighting factor and the assigned raw score for each evaluation category (see Table 1). The product of the weighting factor and raw score results in a weighted score for each category (see Table 2). The sum of the weighted scores results in a final score that is ranked with the other sites. The site with the highest weighted score is ranked first, the next highest score is ranked second and so on.

5 Results of Site Ranking and Recommendations

Based on the results of our evaluation, the five potential well sites have been ranked in the following order (in order of most favorable to least favorable):

1. Site 3 (Undeveloped Lot off Mountain Avenue and East Duarte Road)
2. Site 1 (New Hope Church's Undeveloped Lot)
3. Site 5 (Undeveloped Lot off Huntington Drive)
4. Site 4 (Dura Properties' Parking Lot)
5. Site 2 (Westminster Garden)

Of the sites reviewed, all of them score moderately to very high in most of the evaluation criteria categories. Based on the evaluation criteria categories and the weighting factors, Site 3 is the highest ranked based on ease of property access, proximity to existing wells, potential well yield, proximity to potential contaminant sources, adequate space for drilling equipment, and drilling rig access.

ATTENTION: WORK PLAN MODIFICATIONS MAY BE REQUIRED IF WELL AND GEOLOGIC CONDITIONS ENCOUNTERED AT THE SITE INSPECTION ARE FOUND TO DIFFER FROM THE SCOPE OF WORK PRESENTED TO THIS DEPARTMENT.

I hereby agree to comply in every respect with all the regulations of the County Environmental Health Division and with all ordinances and laws of the County of Los Angeles and the State of California pertaining to well construction, reconstruction, and decommissioning. Upon completion of the well and within thirty days thereafter, I will furnish the Environmental Health office with a completion log of the well, giving date drilled, depth of the well, perforations in the casing, and any other data deemed necessary by the County Environmental Health Division.

Signature of C-57 Licensee: [signature] Printed Name: [signature]

THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED OFF BY THE DEPUTY HEALTH OFFICER. WELL CONSTRUCTION OR DECOMMISSIONING CANNOT BE INITIATED WITHOUT A WORK PLAN APPROVAL FROM THIS DEPARTMENT.

Pacific Surveys

a full service geophysical well logging company

Video Survey Report C0121837

Company:	Layne Christensen	**Date:**	29-Apr-11		
Well:	Buena Vista Well	**Run No.**	One	**Truck**	PS-5
Field:	Duarte	**Job Ticket:**	15929		
State:	California	**Total Depth:**	718 ft		
		Water Level:	203 ft	SWL	
Location:	2002 Buena Vista St.	**Oil on Water:**	No	**Amount:**	N/A
	GPS: N34o 07.710' W117o 58.560'	**Operator:**	Ridder		
Zero Datum:	Ground Level **Tool Zero:**	Side-Scan		**Dead Space**	21"
Reason for Survey:	New Well Construction				

Depth	Remarks
0.0 ft	Start survey at ground level
202.7 ft	SWL: water is clear to cloudy. Visibility adequate
297.0 ft	Water clears distinctly
302.6 ft	Perfs: all appear open and in good shape. Joint is at 301.2 ft
340.9 ft	Perfs end: entire interval is open
362.8 ft	Perfs: all appear open and in good shape.
473.5 ft	Perfs end: entire interval is open
491.5 ft	Perfs: all appear open and in good shape
550.0 ft	Slight bio-growth between column of louvers
701.6 ft	Perfs end: entire interval is open
718.0 ft	Bottom of light bar stops: in very soft fill. End survey

Perforation:	
Ful-Flo Louvers	300.00 ft to 340.00ft
	360.00 ft to 475.00ft
	495.00 ft to 700.00ft
Casing Size	
18"	0.00 ft to 720.00ft
Casing Material	N/A
Screen Material	N/A
