RECON Number 10132

The California Environmental Quality Act (CEQA) requires that when a public agency completes an environmental document which includes measures to mitigate or avoid significant environmental effects, the public agency must adopt a mitigation monitoring and reporting program. This requirement ensures that environmental impacts found to be significant will be mitigated. The reporting or monitoring program must be designed to ensure compliance during project implementation (Public Resources Code Section 21081.6).

CULTURAL RESOURCES/TRIBAL CULTURAL RESOURCES					
<p>MM CUL-1: In order to mitigate potentially significant impacts to buried archaeological features from ground disturbing activities, implementation of a construction monitoring program would be implemented as follows:</p> <ul style="list-style-type: none"> • Prior to any ground disturbing activities, the Gabrieleno Band of Mission Indians – Kizh Nation shall be consulted. • An archaeological Principal Investigator and a local Native American monitor will attend a pre-construction meeting prior to ground-disturbing activities. The responsibilities and obligations of the monitors will be reviewed at this meeting. • The Principal Investigator and local Native American monitor will be present during ground-disturbing activities, such as grading and trenching into native soils. • If previously unidentified potentially significant cultural resources are discovered, construction activities should be diverted away from the discovery and the resources should be evaluated for significance. Isolates and non-significant deposits shall be minimally documented in the field. Significant archaeological discoveries include intact features, stratified deposits, previously unknown archaeological sites, and human 	Prior to any Ground Disturbance	Notification to Construction Personnel	General Contractor

<p>remains. The Principal Investigator shall inform the City of the discovery and together with the Native American monitor determine its significance. To mitigate potential impacts to significant cultural resources, a Research Design and Data Recovery Program shall be prepared by the Principal Investigator, approved by the City, and implemented using professional archaeological methods. Construction activities would be allowed to resume after the completion of the recovery of an adequate sample and the recordation of features.</p> <ul style="list-style-type: none"> • All cultural material collected during the monitoring and data recovery program shall be processed and curated at Los Angeles County facility that meets federal standards per 36 Code of Federal Regulations Part 79 unless the tribal monitors request the collection. • If human remains are discovered, work shall halt in that area and the procedures set forth in the California Public Resources Code (Section 5097.98) and State Health and Safety Code (Section 7050.5) will be followed. The principal investigator shall contact the County Coroner. • After the completion of the monitoring, the archaeological Principal Investigator shall prepare a report. If no significant cultural resources are discovered, a brief letter shall be prepared. If
