

What Can I wear In the Pool??

Proper swimwear is required for participation in water activities. Proper swimwear is defined as a commercially produced bathing suit made of polyester or nylon.

Excessively revealing or see-through swimwear is prohibited.

- ◆ Cotton and other clothing materials hold detergents, germs and bacteria that can cause illness.
- ◆ Released detergents, germs and bacteria can effect water clarity and water chemistry.
- ◆ Cotton absorbs wear along with pool chemicals requiring the pool to use more disinfectant.
- ◆ When cotton and other materials absorb water, they become heavy, which can make swimming difficult and cause a swimmer to become distressed.
- ◆ When wet, cotton t-shirts do not fit tight to the body and can increase entrapment.
- ◆ Clothes with buttons, hooks and plastic or metal fasteners can scrape and damage slides and pool features.
