## Executive Summary

### Purpose and Scope

The Farmstead project proposes to construct a 443-lot subdivision of single-family residential housing in two phases within Burbank, Washington, an unincorporated urban community within Walla Walla County. Phase 1 of the development, with 222 dwelling units, is assumed to be complete by the end of 2025. Phase 2 of the development, with 221 dwelling units, is assumed to be complete by the end of 2028. The proposed development will have three accesses: two on Quincy Road and one on Hanson Loop Road. See Figure 2 for the site plan.

This report analyzes the traffic impacts generated by the completed development as required by Walla Walla County (County) and Washington State Department of Transportation (WSDOT).

The following intersections were identified for analysis:

1. State Route (SR) 124 / US Highway 12 Westbound Ramps
2. SR 124 and 5th Avenue / Gateway Road and US Highway 12 Eastbound Ramps
3. 5th Avenue / Jantz Road
4. Jantz Road and Ray Boulevard / Humorist Road
5. Quincy Road / Hanson Loop Road (assumes Hanson Loop Road as the east-west roadway)
6. US Highway 12 / Hanson Loop Road (assumes Hanson Loop Road as the east-west roadway)
7. Quincy Road / North Drive (site access; assumes North Drive as the east-west roadway)
8. Quincy Road / South Drive (site access; assumes South Drive as the east-west roadway)
9. Hanson Loop Road / Red Lane (site access; assumes Red Lane as the east-west roadway)

### Findings

The findings of this traffic impact analysis (TIA) are listed below.

### Present Traffic Volumes

All Traffic Data collected the data on January 20, 2022, a date with a typical school schedule, at the following intersections:

- SR 124 / US Highway 12 Westbound Ramps
- SR 124 and 5th Avenue / Gateway Road and US Highway 12 Eastbound Ramps
- 5th Avenue / Jantz Road
- Jantz Road and Ray Boulevard / Humorist Road
- Quincy Road / Hanson Loop Road
- US Highway 12 / Hanson Loop Road
- Quincy Road / South Drive (South Drive exists as a gravel roadway)
- Hanson Loop Road / Red Lane (Red Lane exists as a driveway that serves two lots)

Turning movement counts (TMCs) at the Quincy Road / South Drive intersection were used to estimate the northbound and southbound through trips at the future North Drive site access.

### In-Process Projects

The Burbank Business Park, a project by the Port of Burbank, was identified for inclusion in this TIA.

The Huntsman's Estates development, a proposed project adjacent to the Farmstead development, is evaluated in parallel with Farmstead to identify the projects' individual and combined impacts.

### ***Future Traffic Volumes***

An annually compounded background growth rate of 2% was applied to intersection movements between public roadways. This rate was calculated based on the Benton-Franklin Council of Governments' (BFCG) 2025 model link volumes and 2045 future model link volumes.

### ***Trip Generation***

When fully built out and occupied in 2028, the development is anticipated to generate 3,968 vehicle trips on a typical weekday, including 289 trips during the AM peak hour and 403 trips during the PM peak hour.

### ***Access and Circulation***

The distribution of site trips to the access intersections is based on the shortest path between the lots and either Quincy Road or Hanson Loop Road. This results in a site trip distribution with 70% using North Drive to access Quincy Road, 24% using South Drive to access Quincy Road, and 6% using Red Lane to access Hanson Loop Road.

### ***Intersection Performance***

- All studied intersections currently operate at an acceptable level of service (LOS) during the weekday AM and PM peak hours.
- Seven out of the nine studied intersections operate at an acceptable LOS during the 2025 With Both Projects (Phase 1 of Both Estates) conditions during the AM and PM peak hours.
- Four out of the nine studied intersections operate at an acceptable LOS during the 2028 and 2033 With Both Projects (All Phases of Both Estates) conditions during the AM and PM peak hours.
- The SR 124 / US Highway 12 WB Ramps intersection operates below the acceptable LOS during the 2028 and 2033 With Both Projects (All Phases of Both Estates) conditions during the peak hour.
- The SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps intersection operates below the acceptable LOS during the 2028 and 2033 With Both Projects (All Phases of Both Estates) conditions during the AM and PM peak hours.
- The 5th Avenue / Jantz Road intersection operates below the acceptable LOS during the 2025, 2028, and 2033 With Both Projects (All Phases of Both Estates) conditions during the AM and PM peak hours.
- The US Highway 12 / Hanson Loop Road intersection operates below the acceptable LOS during the 2025, 2028, and 2033 With Both Projects (All Phases of Both Estates) conditions during the PM peak hour. The Farmstead and Huntsman's Estates projects do not contribute trips to the failing movement at the US Highway 12 / Hanson Loop Road intersection.
- WSDOT should monitor growth at the SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps and US Highway 12 / Hanson Loop Road intersections to ensure the intersections operate at an acceptable LOS and v/c ratio.

### ***Intersection Mitigation***

- A continuous southbound right-turn lane at the SR 124 / US Highway 12 WB Ramps intersection will bring the intersection to operate at an acceptable LOS in the 2033 PM With Both Projects conditions.

- A two-lane roundabout and two circulating roundabout lanes at the SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps intersection will bring the intersection to operate at an acceptable LOS in the 2033 With Both Projects conditions in the AM and PM peak hours.
- Changing the intersection control at the Jantz Road and Ray Boulevard / Humorist Road intersection to allow for northbound and southbound free-flowing movement with the east and west legs stop-controlled will bring the intersection to operate at an acceptable LOS in the 2033 With Both Projects conditions during the AM and PM peak hours.
- Widening the eastbound approach at the US Highway 12 / Hanson Loop Road intersection to provide an exclusive eastbound right-turn lane will mitigate the impacts generated by the Farmstead project.

### ***Sensitivity Analysis***

Up to 500 dwelling units can be built out at the Farmstead and Huntsman's Estates projects until the 5th Avenue / Jantz Road intersection operates below the acceptable LOS in the 2025 With Project PM peak hour conditions. This finding relies upon the amended BBP BSP and a 1% annual background growth rate.

WSDOT should monitor growth at the US Highway 12 / Hanson Loop Road intersections to ensure the intersection operates at an acceptable LOS and v/c ratio.

### ***Collision Analysis***

The collision rate is below the critical collision rate at all the studied intersections. A pattern of object collisions at the SR 124 / US Highway 12 Westbound Ramps intersection is notable.

### ***Pedestrian, Bicycle Facilities, and Public Transportation***

Pedestrian, bicycle, and transit facilities are not readily available for future subdivision residents within the study area.

### ***Sight Distance at Site Access Locations***

Review of the current conditions along Quincy Road and Hanson Loop Road suggests that adequate intersection sight distance (ISD) is available.

### ***Recommendations***

This traffic impact analysis supports the following recommendations.

### ***Sensitivity Analysis***

Negotiate an equitable cost-sharing arrangement between the Farmstead developer and the Huntsman's Estates developer to achieve the following mitigations to which both parties' projects contribute.

- At the US Highway 12 / Hanson Loop Road intersection, widen the eastbound approach to provide a shared left-through lane and an exclusive right-turn lane.
- The County should approve 500 dwelling units (combined) for the Farmstead Estates and Huntsman Estates projects. The developers may determine the equitable division of the 500 dwelling units; PBS suggests they could be split equally between the projects, with 250 units for each. Additional traffic mitigation should be evaluated and approved before more than 500 dwelling units are approved.

### ***Intersection Mitigation for Full Buildout***

Negotiate an equitable cost-sharing arrangement between the Farmstead developer and the Huntsman's Estates developer to achieve the following mitigation to which both parties' projects contribute. This mitigation would apply after more than 500 dwelling units are permitted.

- At the Jantz Road and Ray Boulevard / Humorist Road intersection:
  - Reassign the stop-control to the eastbound and westbound movements.
  - Add high-visibility crosswalk features to both existing marked crosswalks.
  - Install rectangular rapid-flashing beacons (RRFB) alongside the crosswalk of the north leg to alert approaching drivers of pedestrians in the crosswalk.
  - Address site distance at the northwest and southeast corners.

### ***Intersection Mitigation Shared with the Port of Walla Walla***

Negotiate an equitable cost-sharing arrangement among the Farmstead developer, the Port of Walla Walla, and the Huntsman's Estates developer to achieve the following mitigations to which all three parties' projects contribute. These mitigations would apply after more than 500 dwelling units are permitted.

- At the SR 124 / US Highway 12 WB Ramps intersection:
  - Construct a westbound receiving lane departing the intersection to the US Highway 12 on-ramp.
  - Reconfigure the southbound right-turn movement to flow freely into the added lane, then to merge into the existing lane downstream before merging into the US Highway 12 mainline.
- At the SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps intersection, consistent with the recommendation in the BBP TIA:
  - Expand the south leg roadway provide two travel lanes in each direction.
  - Designate the outer northbound approach lane exclusively for right turns to the eastbound US Highway 12 on-ramp.
  - Expand the roundabout to provide two circulating lanes.
  - Reconfigure the westbound approach to allow left turns from both approach lanes.
- At the 5th Avenue / Jantz Road intersection, consistent with the recommendation in the BBP TIA:
  - Install a traffic signal with an exclusive southbound left-turn lane and a westbound right-turn lane with a receiving lane.

### ***Collision Analysis***

WSDOT should evaluate the intersection conditions and install advisory speed signage for all approaches at the SR 124 / US Highway 12 Westbound Ramps intersection.

### ***Pedestrian, Bicycle, and Public Transportation Facilities***

Construct standard frontage improvements, including sidewalks, along Quincy Road. Assure all driveways, sidewalks, crosswalks, and curb ramps constructed with the subdivision project comply with current Americans with Disabilities Act guidelines.

***Sight Distance at Site Access Location***

Design the proposed site access intersections in accordance with American Association of State Highway and Transportation Officials guidelines for ISD based on the posted speed of the primary roadway. Install no objects within the sight distance triangles that would block exiting drivers' view of approaching traffic.

## 1 INTRODUCTION

The purpose of this study is to determine the impacts of the traffic generated by the Farmstead project on the surrounding roadway infrastructure. The project site is shown on the vicinity map (Figure 1). This study will determine if mitigation is required to keep the roadways operating safely and at capacity levels acceptable under the current level of service standards. This report documents the findings and conclusions of a traffic impact analysis (TIA) conducted for the proposed site plan (Figure 2) application for property located in Burbank, Washington, an unincorporated urban community within Walla Walla County.

### 1.1 Scope of Study

This study documents the existing and proposed conditions, traffic data, safety analysis, and intersection operations in accordance with the guidelines of Walla Walla County (County) and of the Washington State Department of Transportation (WSDOT) where applicable.

The following intersections were identified for analysis:

1. State Route (SR) 124 / US Highway 12 Westbound (WB) Ramps
2. SR 124 and 5th Avenue / Gateway Road and US Highway 12 Eastbound (EB) Ramps
3. 5th Avenue / Jantz Road
4. Jantz Road and Ray Boulevard / Humorist Road
5. Quincy Road / Hanson Loop Road (assumes Hanson Loop Road as the east-west roadway)
6. US Highway 12 / Hanson Loop Road (assumes Hanson Loop Road as the east-west roadway)
7. Quincy Road / North Drive (site access; assumes North Drive as the east-west roadway)
8. Quincy Road / South Drive (site access; assumes South Drive as the east-west roadway)
9. Hanson Loop Road / Red Lane (site access; assumes Red Lane as the east-west roadway)

PBS evaluated the adjacent Huntsman's Estates development within this TIA report to look at conditions with both the projects (Farmstead and Huntsman's Estates). This TIA includes analysis of future background conditions based on an annually compounded growth rate and the addition of traffic from the Burbank Business Park in-process project. These background conditions are addressed later in this TIA.

This TIA is prepared for submission to the County. The traffic-related issues addressed in this report are based on the County's *Traffic Impact Analysis Guidelines* (see References) and the scope of work letter dated December 10, 2021, that was reviewed by County staff. The topics include:

- Baseline traffic conditions, including existing counts, one in-process project, and background growth
- Proposed site-generated traffic volumes and their distribution
- Capacity analysis of the existing and future conditions during the weekday AM and PM peak hours for the following scenarios:
  - 2022 Existing Conditions
  - 2025 Without Project
  - 2025 With Project (Phase 1 of Farmstead)
  - 2025 With Both Projects (Phase 1 of Farmstead and Huntsman's Estates)
  - 2028 Without Project
  - 2028 With Project (Phases 1 and 2 of Farmstead)
  - 2028 With Both Projects (Phases 1 and 2 of Farmstead and Huntsman's Estates)

- 2033 (Horizon Year) Without Project
- 2033 (Horizon Year) With Project (Phases 1 and 2 of Farmstead)
- 2033 (Horizon Year) With Both Projects (Phases 1 and 2 of Farmstead and Huntsman's Estates)
- Safety analysis of the existing and future conditions
- Recommendations for mitigation of traffic impacts and conclusions
- Sensitivity analysis to provide the point at which both Farmstead and Huntsman's Estates will cause the study intersections to operate below County standards

## 1.2 Existing Site Conditions

The site, which is identified with parcel numbers 300812510090, 300812510091, and 300812510092, is located in Burbank, Washington, an unincorporated urban community within the County. The site is currently undeveloped and was previously used for agricultural purposes. The site is zoned BR (Burbank Residential).

## 1.3 Existing Infrastructure

The existing infrastructure and operational traffic conditions in the study area were documented. Roadway conditions were studied to confirm that the roadways are currently operating in a safe and efficient manner.

### 1.3.1 Land Uses

The land uses surrounding the site are documented to help identify the site location and to provide reference for any discussion of conditions that might impact the adjacent properties. The land uses surrounding the site are shown in Table 1.

**Table 1. Land Uses Around the Site**

North of Site		S I T E	East of Site (across US Highway 12)	
Zoning	BR		Zoning	BR
Description	Burbank Residential		Description	Burbank Residential
Existing Use	Residential Housing		Existing Use	Residential Housing

West of Site		S I T E	East of Site (across US Highway 12)	
Zoning	BR		Zoning	BR
Description	Burbank Residential		Description	Burbank Residential
Existing Use	Residential Housing		Existing Use	Residential Housing

South of Site	
Zoning	BR
Description	Burbank Residential
Existing Use	Undeveloped

### 1.3.2 Existing Roadways

The existing collector roadway providing access to the site is Quincy Road. Data were gathered on this and other roadways in the study area to inform operations analysis of the existing roadway system. The pertinent information regarding the study area roadways is tabulated in Table 2.

**Table 2. Existing Roadway Information**

Roadway Name	Classification	Speed Limit <sup>b</sup>	Lane Configuration		
			Lanes	Sidewalks	Bike Lanes
US Highway 12	Urban/Rural <sup>a</sup> Other Freeways / Expressways	60	4	No	No
SR 124	Urban Other Principal Arterial	40	2	No	No
Gateway Road	Minor Arterial	25	2	No	No
5th Avenue	Major Collector	25	2	Yes	No
Jantz Road	Local Access	35	2	Partial	No
Ray Boulevard	Local Access	25	2	No	No
Humorist Road	Minor Arterial	25	2	Partial	No
Quincy Road	Local Access	35	2	No	No
Hanson Loop Road	Major Collector / Minor Collector <sup>c</sup>	35	2	No	No

<sup>a</sup> The US Highway 12 classification is urban within the Burbank UGA, including at the SR 124 interchange, and rural outside Burbank UGA, including at the Hanson Loop Road intersection.

<sup>b</sup> Stated in miles per hour (mph).

<sup>c</sup> The Hanson Loop Road classification is major collector south of Humorist Road within the Burbank urban growth area (UGA) and minor collector outside the Burbank UGA, beginning approximately 0.45 mile south of Harrison Place.

### 1.3.3 Major Intersections and Traffic Control

The existing lane geometrics and traffic controls at the study intersections were documented as relevant to the intersection operations analysis below in this TIA. Table 3 summarizes the existing intersection configurations.

**Table 3. Major Intersections: Existing Lanes and Traffic Controls**

Intersection	SR 124 / US Highway 12 WB Ramps			
Leg	NB	SB	WB	EB
Control	Unc.	Yield	Yield	NA
Number of Lanes	1	2	1	NA

Intersection	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps			
Leg	NB	SB	WB	EB
Control	Yield	Yield	Yield	Yield
Number of Lanes	1	1	2	1

Intersection	5th Avenue / Jantz Road			
Leg	NB	SB	WB	EB

<b>Control</b>	Unc.	Unc.	Stop	NA
<b>Number of Lanes</b>	1	1	1	NA

<b>Intersection</b>	<b>Jantz Road and Ray Boulevard / Humorist Road</b>			
<b>Leg</b>	<b>NB</b>	<b>SB</b>	<b>WB</b>	<b>EB</b>
<b>Control</b>	Stop	Stop	Unc.	Unc.
<b>Number of Lanes</b>	1	1	1	1

<b>Intersection</b>	<b>Quincy Road / Hanson Loop Road</b>			
<b>Leg</b>	<b>NB</b>	<b>SB</b>	<b>WB</b>	<b>EB</b>
<b>Control</b>	Stop	Stop	Unc.	Unc.
<b>Number of Lanes</b>	1	1	1	1

<b>Intersection</b>	<b>US Highway 12 / Hanson Loop Road</b>			
<b>Leg</b>	<b>NB</b>	<b>SB</b>	<b>WB</b>	<b>EB</b>
<b>Control</b>	Unc.	Unc.	Stop	Stop
<b>Number of Lanes</b>	4	4	1	1

<b>Intersection</b>	<b>Quincy Road / South Drive</b>			
<b>Leg</b>	<b>NB</b>	<b>SB</b>	<b>EB</b>	<b>WB</b>
<b>Control</b>	Unc.	Unc.	Stop	NA
<b>Number of Lanes</b>	1	1	1	NA

<b>Intersection</b>	<b>Hanson Loop Road / Red Lane</b>			
<b>Leg</b>	<b>NB</b>	<b>SB</b>	<b>EB</b>	<b>WB</b>
<b>Control</b>	Unc.	Unc.	NA	Stop
<b>Number of Lanes</b>	1	1	NA	1

NA = approach does not exist

Stop = Stop-controlled leg approaching intersection

Unc. = Uncontrolled leg approaching intersection – does not stop or yield

Yield = Yield-controlled leg approaching roundabout intersection

The project area is defined as the vicinity of the site encompassed by the study intersections. The operation of the intersections can be controlled by signing, roundabouts, or signalization. Table 3 refers to the type of control and number of approach lanes for each leg of each intersection. The existing lane configurations and traffic controls for all existing intersections, as well as the proposed configurations for all proposed access intersections, are shown in Figure 3.

## 1.4 Traffic Volumes

### 1.4.1 Existing Traffic Volumes

Turning movement counts (TMCs) were gathered for the weekday AM peak period (7:00–9:00 am) and the weekday PM peak period (4:00–6:00 pm). PBS retained All Traffic Data (ATD) to gather the counts. ATD

collected the data on January 20, 2022, a date that had a typical school schedule, at the following intersections. Copies of the count data used are provided in Appendix A.

- SR 124 / US Highway 12 WB Ramps
- SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps
- 5th Avenue / Jantz Road
- Jantz Road and Ray Boulevard / Humorist Road
- Quincy Road / Hanson Loop Road
- US Highway 12 / Hanson Loop Road
- Quincy Road / South Drive (South Drive exists as a gravel roadway)
- Hanson Loop Road / Red Lane (Red Lane currently exist as a driveway that serves two lots)

TMCs at the Quincy Road / South Drive were used to estimate the northbound and southbound through trips past the future North Drive site access.

The resulting existing peak hour volumes for the studied intersections are shown in Figure 4. These volumes were input to the intersection operations analyses addressed later in this TIA.

#### **1.4.2 Background Growth**

Background growth is a generic increase in traffic volumes that either is not attributable to specific developments or is attributable to influences outside the study area. An annually compounded background growth rate of 2% was applied to intersection movements between public roadways. This rate was calculated based on the Benton-Franklin Council of Governments' (BFCG) 2025 and 2045 model link volumes along US Highway 12. The BFCG link volumes and detailed calculations are provided in Appendix A.

Of note, the BFCG model volumes suggested a near-zero growth rate off the highway and within the Burbank community, suggesting that applying a 2% growth rate to the local roadways overestimates the future volumes. By comparison, the Burbank Business Park TIA (discussed below in the In-Process Projects section) applied a 1% growth rate.

#### **1.4.3 In-Process Projects**

In-process trips from approved projects were requested from the County, and the Burbank Business Park (BBP) in-process project was supplied for inclusion in this TIA. The BBP TIA was prepared by Transpo Group in April 2013 for the Port of Walla Walla (Port); excerpts are provided in Appendix B. The following land uses were proposed as part of the BBP development:

- Approximately 53 acres of industrial land use
- Approximately 186,200 gross square feet (gsf) of retail land use (on 17 acres)
- Approximately 434,400 gsf of business park land use (on 40 acres)

PBS reviewed aerial imagery (Google Earth Pro software, version 7.3.4.8642) dated April 14, 2021, and found that only a portion of the BBP has been developed. Here is the approximate percentage of undeveloped land area by land use:

- 95% of industrial land use
- 63% of retail land use
- 100% of business park land use

To estimate the number of remaining in-process trips that could be generated by the undeveloped area of the BBP project, PBS extrapolated the proposed trip generation for the entire development based on the

remaining undeveloped land area. The remaining undeveloped area is assumed to be built out linearly until full build-out in 2033, so the trips generated by the undeveloped area were added linearly to the baseline traffic. The in-process trips for the studied intersections are summarized on Figures 5, 11, and 17. Detailed calculations of the BBP trip accounting are provided in Appendix B.

The BBP TIA addressed operational deficiencies at the SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps intersection and the 5th Street / Jantz Road intersection. Since their timing is unknown, the intersection improvements recommended in the BBP TIA were not included in the scenarios evaluated within the Level of Service Analyses section of this Farmstead TIA for consistency. However, the improvements are discussed and addressed in the Intersection Mitigation section of this TIA. Details of the intersection mitigation improvements recommended in the BBP TIA are provided in Appendix B.

Amendments to the binding site plan (BSP) for the BBP were adopted recently, and PBS learned of the amendments after preparing the Level of Service Analyses. Therefore, the BBP BSP amendments are addressed in the Sensitivity Analysis section below.

#### **1.4.4 Future Volumes**

The baseline volumes for 2025 intersection operations analyses, termed the 2025 Without Project volumes, represent the sum of 2022 existing traffic, in-process project volumes, and 3 years of background growth. Figure 6 presents the 2025 Without Project volumes for the weekday AM and PM peak hours.

The baseline volumes for 2028 intersection operations analyses, termed the 2028 Without Project volumes, represent the sum of 2022 existing traffic, in-process project volumes, and 6 years of background growth. Figure 12 presents the 2028 Without Project volumes for the weekday AM and PM peak hours.

The baseline volumes for 2033 intersection operations analysis, termed the 2033 Without Project volumes, represent the sum of 2022 existing traffic, in-process project volumes, and 11 years of background growth. Figure 18 presents the 2033 Without Project volumes for the weekday AM and PM peak hours.

#### **1.4.5 Traffic Volumes Findings**

Traffic volumes in the study area will continue to increase without or with the project. Trips from the undeveloped area of the BBP development were included in this analysis.

Background growth (at 2% for 3 years) was estimated to add approximately 6.1% to the 2022 existing volumes to estimate 2025 Without Project volumes.

Background growth (at 2% for 6 years) was estimated to add approximately 12.6% to the 2022 existing volumes to estimate 2028 Without Project volumes.

Background growth (at 2% for 11 years) was estimated to add approximately 24.3% to the 2022 existing volumes to estimate 2033 Without Project volumes.

## 2 PROPOSED CONDITIONS

The proposed development will add traffic to the roadway system. Where the project is located, the size of the project, and when it will be completed are all important elements that need to be considered to determine the impacts of this development on safety and capacity. It is also important to examine how the project will operate with the existing transportation system, estimate how much new traffic it will generate, and predict where traffic generated by the site will be distributed. Furthermore, this section will address any funded infrastructure changes planned by other agencies or developers. All of these elements are important in assessing the traffic impacts of this project.

### 2.1 Project Description

The Farmstead project proposes to construct 443 dwelling units of single-family detached housing on approximately 100 acres. The site is currently vacant and zoned BR (Burbank Residential). The developer plans on constructing approximately 50 dwelling unit phases per year starting from Quincy Road and progressing toward Hanson Loop Road. For the purposes of this TIA, the development is assumed to occur in two phases and is anticipated to be fully constructed and occupied by 2028. Phase 1 is assumed to include 222 dwelling units by 2025, and Phase 2 is assumed to include the remaining 221 dwelling units by 2028 for a total of 443 dwelling units. The project proposes two accesses on Quincy Road and one on Hanson Loop Road. See Figure 2 for site plan.

The Huntsman's Estates development, located adjacent to the south of the Farmstead site, may propose interconnecting roadways between the two properties. This may result in a reduced number of Farmstead dwelling units along the south property line to provide right-of-way for connecting streets. For the purposes of this TIA, and as a conservative approach, the total proposed 443 dwelling units of single-family detached housing was used in this analysis.

### 2.2 Access and Circulation

Quincy Road and Hanson Loop Road as the main accesses are proposed for this project. Vehicles will access Quincy Road via North Drive and South Drive, and will access Hanson Loop Road via Red Lane, as shown on the site plan on Figure 2.

The Huntsman's Estates development, located adjacent to the south of the Farmstead site, may propose interconnecting roadways between the two properties. This may result in some trips from Farmstead accessing Quincy Road via Huntsman's Estates and its proposed site accesses. For the purposes of this TIA, and as a conservative approach, all Farmstead site trips are assumed to use only the three site accesses proposed with the Farmstead site.

*Finding:* The proposed Farmstead development will have two accesses (North and South Drive) on Quincy Road and one access (Red Lane) on Hanson Loop Road.

### 2.3 Trip Generation and Distribution

The following sections rely on data provided in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual* (see References section). Detailed trip generation calculations are provided in Appendix C.

#### 2.3.1 Proposed Farmstead Trip Generation

The Burbank roadway network will see some increase in traffic volume from the proposed Farmstead project. The weekday trip generation values are based on the ITE regression equations, and the independent variable is the number of dwelling units of single-family detached housing (ITE 210). The trips generated by the project

were estimated by calculating the trips for 443 dwelling units at the site's full build-out. Trips were assigned as half each to Phase 1 and Phase 2. Table 4 presents the trip generation estimates.

**Table 4. New Trip Generation for Farmstead**

Phases	Phase 1		Phase 2		Total, All Phases	
Land Use (ITE Code)	Single-Family Dwelling (210)					
Independent Variable	Dwelling Units					
Size	222		221		443	
Average Weekday Trips (ADT)	1,988		1,980		3,968	
Peak Hour Trips	AM	PM	AM	PM	AM	PM
In	38	127	37	127	75	254
Out	107	75	107	74	214	149
Total Trips	145	202	144	201	289	403

*Finding:* When fully built out and occupied in 2028, the Farmstead development is anticipated to generate 3,968 vehicle trips on a typical weekday, including 289 trips during the AM peak hour and 403 trips during the PM peak hour.

### 2.3.2 Proposed Farmstead Trip Distribution

The proposed distribution of primary trips is based on the BFCG select zone distribution model, with values rounded to the nearest 5%. Copies of the transportation model outputs are provided in Appendix C.

Trip distribution and trip generation are applied together to assign trips to access points and the studied intersections. Site-generated trips are estimated to distribute as follows:

- 85% to and from US Highway 12, northwest of SR 124
- 5% to and from SR 124, northeast of US Highway 12
- 5% to and from Maple Street, west of Jantz Road
- 5% to and from US Highway 12, southeast of Hanson Loop Road

The distribution pattern above represents an external distribution of Farmstead trips entering and exiting the study area. The distribution and assignment of new trips to and from the project are shown on Figures 7 and 13.

The proposed site was reviewed to estimate the route preference to and from the site. The distribution of site trips to the access intersection was based on the lots with the shortest path to either Quincy Road or Hanson Loop Road. The site trips were distributed from the site with 70% using North Drive, 24% using South Drive, and 6% using Hanson Loop Road. A copy of the internal site trip distribution to the access intersections is provided in Appendix C.

### 2.3.3 Proposed Trip Generation and Distribution for Huntsman's Estates

For the Huntsman's Estates project, the weekday peak hour trip generation values are based on the ITE land use for single-family detached housing (ITE 210). The ITE regression equations are applied, and the independent variable is the number of dwelling units. The trips generated by the project were estimated by calculating the trips for 484 dwelling units at the site's full build-out. Huntsman's Estates is anticipated to generate 4,305 vehicle trips during a typical weekday, including 313 during the AM peak hour and 438 during the PM peak hour.

The proposed distribution of new (primary) trips at Huntsman's Estates is based on the BFCG select zone distribution model, with values rounded to the nearest 5%, like the Farmstead project. See the Proposed Farmstead Trip Distribution section for details. The distribution and assignment of the new trips at the Huntsman's Estates are shown on Figures 9 and 15.

The Huntsman's Estates site trips are distributed from the site with 82% using Road B (northern driveway) and 18% using Road C (southern driveway). A copy of the internal site trip distribution to the access intersections is provided in Appendix C.

#### **2.3.4 Future Volumes with Project**

Figure 8 presents the 2025 With Project volumes for Phase 1 of Farmstead, or the sum of Without Project volumes and the Phase 1 site-generated trips, for the weekday AM and PM peak hours.

Figure 10 presents the 2025 With Project volumes for Phase 1 of both Farmstead and Huntsman's Estates, or the sum of Without Project volumes and the Phase 1 site-generated trips for both projects, for the weekday AM and PM peak hours.

Figure 14 presents the 2028 With Project volumes for Phases 1 and 2 of Farmstead, or the sum of Without Project volumes and the Phases 1 and 2 site-generated trips, for the weekday AM and PM peak hours.

Figure 16 presents the 2028 With Project volumes for Phases 1 and 2 of both Farmstead and Huntsman's Estates, or the sum of Without Project volumes and the Phases 1 and 2 site-generated trips for both projects, for the weekday AM and PM peak hours.

Figure 19 presents the 2033 With Project volumes for Phases 1 and 2 of Farmstead, or the sum of Without Project volumes and the Phases 1 and 2 site-generated trips, for the weekday AM and PM peak hours.

Figure 20 presents the 2033 With Project volumes for Phases 1 and 2 of both Farmstead and Huntsman's Estates, or the sum of Without Project volumes and the Phases 1 and 2 site-generated trips for both projects, for the weekday AM and PM peak hours.

### 3 INTERSECTION OPERATIONS ANALYSES

#### 3.1 Operations Description

Traffic operations are assessed in terms of level of service (LOS), a concept developed by transportation engineers to qualify the level of operation of intersections and roadways (*Highway Capacity Manual*, see References). LOS measures are classified in grades "A" through "F," indicating a range of operation, with LOS "A" signifying the best level of operation and LOS "F" representing the worst level.

LOS is quantified in terms of average delay, expressed in seconds per vehicle. LOS "A" reflects full freedom of operation for a driver, while LOS "F" represents operational failure. At unsignalized intersections, the criteria are based on the theory of gap acceptance for the stop-controlled approaches. At signalized intersections, the criteria are based on driver behavior studies. LOS may be reported for individual lane groups, for an intersection approach (aggregating multiple lanes), or for an intersection as a whole (aggregating all entering vehicles).

The volume-to-capacity (v/c) ratio quantifies the portion of the theoretical capacity consumed by traffic demand volume. A v/c ratio of zero (0.00) reflects none of the capacity is consumed and all the capacity is fully available. A v/c ratio of one (1.00) reflects all the capacity is consumed and represents operational failure. The v/c ratio typically is calculated for individual movements or lane groups.

#### 3.2 Operation Standards

The County's *Traffic Impact Analysis Guidelines* (see References) provide the following operation standards.

- LOS D as the minimum acceptable LOS for a signalized intersection, critical movement of an unsignalized intersection, or roadway segment within any urban area under the jurisdiction of Walla Walla County.
- In the urban area, an additional 10 second delay is the maximum allowed for any intersection currently operating at LOS D or lower.
- LOS C is the minimum acceptable LOS for any intersection or roadway segment within the rural areas of Walla Walla County.
- The LOS of any intersection or roadway segment may drop more than two levels of service, provided final level of service is not below the minimum acceptable LOS.

The LOS C standard applies to the Quincy Road / Hanson Loop Road intersection. At all the other studied intersections within County authority, the LOS D standard applies.

Within Walla Walla County, WSDOT has adopted LOS D as the minimum standard at intersections under state jurisdiction within urban areas and LOS C in rural areas (see References). The LOS C standard applies to the US Highway 12 / Hanson Loop Road intersection.

In addition, the WSDOT guidelines for roundabout analysis (see References) recommend the maximum v/c ratio for any approach lane be within a range of 0.85 to 0.90. This standard applies to the US Highway 12 ramp intersections.

#### 3.3 Analysis Methodology

Traffic impacts were estimated to determine the extent of change in traffic conditions caused by the development of this project. In order to make this determination, PBS did the following:

- The individual peak hour volumes were analyzed for 2022, 2025, 2028, and 2033.

- The peak hour factor (PHF) for the overall intersection, as calculated from the count data, was applied all analysis scenarios. The PHF at the North Drive access was assumed to be 0.64 in the AM peak hour and 0.69 in the PM peak hour, similar to the PHF observed at the nearby Quincy Road / South Drive intersection.
- The heavy vehicle percentage (HV%) for each movement, as calculated from the count data, was applied for all analysis scenarios. A minimum of 2% was applied for all scenarios.
- Baseline traffic volumes on the surrounding street system were determined prior to adding the traffic impacts of the proposed project. This was done to establish a baseline for measuring the project impacts at the time of its development. Baseline traffic volume estimates were prepared for 2025, 2028, and 2033 Without Project conditions.
- As noted previously, trip generation estimates for the project were prepared for the weekday AM and PM peak hours on the surrounding street system.
- Cumulative traffic impacts of the proposed project were determined by superimposing the project-generated traffic onto the background weekday AM and PM peak traffic at all studied intersections. These volumes are termed the 2025, 2028, and 2033 With Project conditions.
- As noted previously, since their timing is unknown, the intersection improvements recommended in the BBP TIA were not included in the analysis scenarios for consistency. The improvements are addressed in the Intersection Mitigation section below.
- The LOS for all signalized and stop-controlled intersections was calculated with Trafficware's Synchro software, Version 11, based on *Highway Capacity Manual* (HCM, see References) methodologies.
- The LOS for all roundabout intersections was calculated with Akcelik Associates' SIDRA Intersection software, Version 9, based on WSDOT-recommended settings (see References).
- Intersection results are reported differently depending on the control type.
  - Two-way stop-controlled intersection results report the critical movement LOS, delay, and v/c ratio.
  - All-way stop-controlled, roundabout, and signalized intersection results report the overall intersection LOS and delay as well as the critical lane v/c ratio.

LOS calculation reports for the study area intersections are provided in Appendix D. The key analysis findings are listed in the following tables.

### **3.4 Level of Service Analyses**

#### **3.4.1 2022 Existing Conditions**

Table 5 describes the existing LOS for each intersection within the study area for the 2022 existing conditions during the weekday AM and PM peak hours.

**Table 5. Estimated 2022 Level of Service for Existing Conditions**

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
1	SR 124 / US Highway 12 WB Ramps (NB / SB RT)	v/c < 0.9	A	6.9	0.278	A	5.9	0.456
2	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (NB / WB)	v/c < 0.9	A	4.9	0.240	A	5.1	0.298
3	5th Avenue / Jantz Road (WB)	D	B	10.1	0.172	B	10.1	0.126
4	Jantz Road and Ray Boulevard / Humorist Road (NB)	D	B	10.8	0.143	B	10.1	0.175
5	Quincy Road / Hanson Loop Road (SB)	C	A	8.9	0.017	A	9.2	0.020
6	US Highway 12 / Hanson Loop Road (WB)	C	B	11.9	0.043	C	23.7	0.044
7	Quincy Road / North Drive	D	NA	NA	NA	NA	NA	NA
8	Quincy Road / South Drive	D	-	-	-	-	-	-
9	Hanson Loop Road / Red Lane (SB)	D	-	-	-	A	7.3	0.003

NA = intersection does not yet exist

As shown in Table 5, all studied intersections currently operate at an acceptable LOS during the weekday AM and PM peak hours.

### 3.4.2 2025 Future Conditions Without Project

Table 6 describes the LOS for each intersection within the study area for the 2025 Without Project conditions during the weekday AM and PM peak hours.

**Table 6. Estimated 2025 Level of Service Without Project Conditions**

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
1	SR 124 / US Highway 12 WB Ramps (NB / SB RT)	v/c < 0.9	A	7.5	0.322	A	7.9	0.567
2	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (WB)	v/c < 0.9	A	6.1	0.432	A	5.6	0.429

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
3	5th Avenue / Jantz Road (EB)	D	E	35.9	0.021	E	36.0	0.141
4	Jantz Road and Ray Boulevard / Humorist Road (NB / SB)	D	B	11.4	0.171	B	10.3	0.203
5	Quincy Road / Hanson Loop Road (SB)	C	A	8.9	0.017	A	9.2	0.021
6	US Highway 12 / Hanson Loop Road (EB)	C	B	13.1	0.052	D	31.4	0.176
7	Quincy Road / North Drive	D	NA	NA	NA	NA	NA	NA
8	Quincy Road / South Drive	D	-	-	-	-	-	-
9	Hanson Loop Road / Red Lane (SB)	D	-	-	-	A	7.3	0.003

NA = intersection does not yet exist

As shown in Table 6, seven out of the nine studied intersections operate at an acceptable LOS during 2025 Without Project conditions during the AM and PM peak hours.

The 5th Avenue / Jantz Road (#3) intersection will operate at LOS E during the AM and PM peak hours, below the County LOS D standard. The US Highway 12 / Hanson Loop Road (#6) intersection will operate at LOS D during the PM peak hour, below the WSDOT LOS C standard. Mitigation alternatives for these intersections are discussed below in the Intersection Mitigation section.

### 3.4.3 2025 Future Conditions With Project (Phase 1 of Farmstead)

Table 7 describes the LOS for each intersection within the study area for the 2025 With Project (Phase 1 of Farmstead) conditions during the weekday AM and PM peak hours.

**Table 7. Estimated 2025 Level of Service With Project Conditions (Phase 1 of Farmstead)**

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
1	SR 124 / US Highway 12 WB Ramps (WB / SB RT)	v/c < 0.9	A	6.3	0.486	A	8.5	0.594
2	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (NB / WB)	v/c < 0.9	A	8.0	0.389	A	6.3	0.530
3	5th Avenue / Jantz Road (EB)	D	F	54.6	0.033	F	77.4	0.281

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
4	Jantz Road and Ray Boulevard / Humorist Road (NB / SB)	D	B	13.6	0.382	B	12.3	0.390
5	Quincy Road / Hanson Loop Road (SB)	C	A	9.0	0.024	A	9.3	0.027
6	US Highway 12 / Hanson Loop Road (EB / WB)	C	B	11.7	0.053	<b>D</b>	<b>31.4</b>	<b>0.061</b>
7	Quincy Road / North Drive (EB)	D	A	9.5	0.127	B	10.0	0.110
8	Quincy Road / South Drive (EB)	D	A	8.9	0.040	A	9.0	0.030
9	Hanson Loop Road / Red Lane (SB)	D	-	-	-	A	7.3	0.003

As shown in Table 7, seven out of the nine studied intersections operate at an acceptable LOS during the 2025 With Project (Phase 1 of Farmstead) conditions during the AM and PM peak hours.

The 5th Avenue / Jantz Road (#3) intersection will operate at LOS F during the AM and PM peak hours, below the County LOS D standard. The US Highway 12 / Hanson Loop Road (#6) intersection will operate at LOS D during the PM peak hour, below the WSDOT LOS C standard. Mitigation alternatives for these intersections are discussed below in the Intersection Mitigation section.

### 3.4.4 2025 Future Conditions With Both Projects (Phase 1 of Both Estates)

Table 8 describes the LOS for each intersection within the study area for the 2025 With Both Projects (Phase 1 of Both Estates) conditions during the weekday AM and PM peak hours.

**Table 8. Estimated 2025 Level of Service With Both Projects Conditions (Phase 1 of Both Estates)**

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
1	SR 124 / US Highway 12 WB Ramps (NB / SB RT)	v/c < 0.9	A	8.5	0.463	A	9.2	0.627
2	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (WB)	v/c < 0.9	A	6.8	0.557	A	7.4	0.654
3	5th Avenue / Jantz Road (EB)	D	<b>F</b>	<b>96.0</b>	<b>0.059</b>	<b>F</b>	<b>245.9</b>	<b>0.637</b>
4	Jantz Road and Ray Boulevard / Humorist Road (NB / SB)	D	C	18.6	0.616	C	16.2	0.600

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
5	Quincy Road / Hanson Loop Road (SB)	C	A	9.0	0.032	A	9.3	0.032
6	US Highway 12 / Hanson Loop Road (EB / WB)	C	B	10.5	0.053	<b>D</b>	<b>32.9</b>	<b>0.064</b>
7	Quincy Road / North Drive (EB)	D	B	11.5	0.173	B	13.3	0.171
8	Quincy Road / South Drive (EB)	D	B	10.1	0.052	B	11.1	0.045
9	Hanson Loop Road / Red Lane (SB)	D	-	-	-	A	7.3	0.003

As shown in Table 8, seven out of the nine studied intersections operate at an acceptable LOS during the 2025 With Both Projects (Phase 1 of Both Estates) conditions during the AM and PM peak hours.

The 5th Avenue / Jantz Road (#3) intersection will operate at LOS F during the AM and PM peak hours, below the County LOS D standard. The US Highway 12 / Hanson Loop Road (#6) intersection will operate at LOS D during the PM peak hour, below the WSDOT LOS C standard. Mitigation alternatives for these intersections are discussed below in the Intersection Mitigation section.

### 3.4.5 2028 Future Conditions Without Project

Table 9 describes the LOS for each intersection within the study area for the 2028 Without Project conditions during the weekday AM and PM peak hours.

**Table 9. Estimated 2028 Level of Service Without Project Conditions**

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
1	SR 124 / US Highway 12 WB Ramps (NB / SB RT)	v/c < 0.9	A	8.2	0.368	B	10.7	0.706
2	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (WB LT-TH / NB)	v/c < 0.9	A	8.0	0.635	A	7.3	0.671
3	5th Avenue / Jantz Road (EB)	D	<b>F</b>	<b>109.1</b>	<b>0.224</b>	<b>F</b>	<b>378.4</b>	<b>1.124</b>
4	Jantz Road and Ray Boulevard / Humorist Road (NB / SB)	D	B	12.1	0.201	B	10.7	0.238
5	Quincy Road / Hanson Loop Road (SB)	C	A	9.0	0.018	A	9.3	0.022

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
6	US Highway 12 / Hanson Loop Road (EB)	C	B	14.3	0.064	E	43.7	0.255
7	Quincy Road / North Drive	D	NA	NA	NA	NA	NA	NA
8	Quincy Road / South Drive	D	-	-	-	-	-	-
9	Hanson Loop Road / Red Lane (SB)	D	-	-	-	A	7.3	0.003

NA = intersection does not yet exist

As shown in Table 9, seven out of the nine studied intersections operate at an acceptable LOS during the 2028 Without Project conditions during the AM and PM peak hours.

The 5th Avenue / Jantz Road (#3) intersection will operate at LOS F during the AM and PM peak hours, below the County LOS D standard. The US Highway 12 / Hanson Loop Road (#6) intersection will operate at LOS E during the PM peak hour, below the WSDOT LOS C standard. Mitigation alternatives for these intersections are discussed below in the Intersection Mitigation section.

### 3.4.6 2028 Future Conditions With Project (All Phases of Farmstead)

Table 10 describes the LOS for each intersection within the study area for the 2028 With Project (All Phases of Farmstead) conditions during the weekday AM and PM peak hours.

**Table 10. Estimated 2028 Level of Service With Project Conditions (All Phases of Farmstead)**

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
1	SR 124 / US Highway 12 WB Ramps (NB / SB-RT)	v/c < 0.9	A	9.2	0.502	B	13.4	0.789

8	Quincy Road / South Drive (EB)	D	A	9.1	0.081	A	9.4	0.067
9	Hanson Loop Road / Red Lane (WB)	D	A	8.5	0.014	A	8.5	0.011

As shown in Table 10, six out of the nine studied intersections operate at an acceptable LOS during the 2028 With Project (All Phases of Farmstead) conditions during the AM and PM peak hours.

The SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (#2) intersection will operate with a v/c ratio of 1.020 during the PM peak hour, greater than the WSDOT-recommended maximum 0.9 v/c ratio for a roundabout approach. The 5th Avenue / Jantz Road (#3) intersection will operate at LOS F during the AM and PM peak hours, below the County LOS D standard. The US Highway 12 / Hanson Loop Road (#6) intersection will operate at LOS E during the PM peak hour, below the WSDOT LOS C standard. Mitigation alternatives for these intersections are discussed below in the Intersection Mitigation section.

### 3.4.7 2028 Future Conditions With Both Projects (All Phases of Both Estates)

Table 11 describes the LOS for each intersection within the study area for the 2028 With Both Projects (All Phases of Both Estates) conditions during the weekday AM and PM peak hours.

**Table 11. Estimated 2028 Level of Service With Both Projects Conditions (All Phases of Both Estates)**

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
1	SR 124 / US Highway 12 WB Ramps (NB / SB-RT)	v/c < 0.9	B	11.2	0.647	<b>C</b>	<b>20.2</b>	<b>0.914</b>
2	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (WB LT-TH)	v/c < 0.9	<b>F</b>	<b>89.1</b>	<b>1.470</b>	<b>F</b>	<b>146.4</b>	<b>1.779</b>
3	5th Avenue / Jantz Road (EB / WB)	D	<b>F</b>	<b>2954.2</b>	<b>2.899</b>	<b>F</b>	<b>1232.2</b>	<b>3.649</b>
4	Jantz Road and Ray Boulevard / Humorist Road (NB / SB)	D	<b>F</b>	<b>94.8</b>	<b>1.112</b>	<b>F</b>	<b>71.5</b>	<b>1.053</b>
5	Quincy Road / Hanson Loop Road (SB)	C	A	9.1	0.049	A	9.4	0.042
6	US Highway 12 / Hanson Loop Road (EB / WB)	C	A	9.9	0.067	<b>E</b>	<b>43.3</b>	<b>0.097</b>

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
7	Quincy Road / North Drive (EB)	D	C	19.2	0.465	D	33.5	0.571
8	Quincy Road / South Drive (EB)	D	B	12.3	0.135	C	16.0	0.154
9	Hanson Loop Road / Red Lane (WB)	D	A	8.5	0.014	A	8.5	0.011

As shown in Table 11, four out of the nine studied intersections operate at an acceptable LOS during the 2028 With Project (All Phases of Both Estates) conditions during the AM and PM peak hours.

The SR 124 / US Highway 12 WB Ramps (#1) intersection will operate with a v/c ratio of 0.914 during the PM peak hour, greater than the WSDOT-recommended maximum 0.9 v/c ratio for a roundabout approach. The SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (#2) intersection will operate with v/c ratios of 1.470 and 1.779 during the AM and PM peak hours, respectively, greater than the WSDOT-recommended maximum 0.9 v/c ratio for a roundabout approach. The 5th Avenue / Jantz Road (#3) intersection will operate at LOS F during the AM and PM peak hours, below the County LOS D standard. The Jantz Road and Ray Boulevard / Humorist Road (#4) intersection will operate at LOS F during the AM and PM peak hours, below the County LOS D standard. The US Highway 12 / Hanson Loop Road (#6) intersection will operate at LOS E during the PM peak hour, below the WSDOT LOS C standard. Mitigation alternatives for these intersections are discussed below in the Intersection Mitigation section.

### 3.4.8 2033 Future Conditions Without Project

Table 12 describes the LOS for each intersection within the study area for the 2033 Without Project conditions during the weekday AM and PM peak hours.

**Table 12. Estimated 2033 Level of Service Without Project Conditions**

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c

7	Quincy Road / North Drive	D	NA	NA	NA	NA	NA	NA
8	Quincy Road / South Drive	D	-	-	-	-	-	-
9	Hanson Loop Road / Red Lane (SB)	D	-	-	-	A	7.3	0.003

NA = intersection does not yet exist

As shown in Table 12, five out of the nine studied intersections operate at an acceptable LOS during the 2033 Without Project conditions during the AM and PM peak hours.

The SR 124 / US Highway 12 WB Ramps (#1) intersection will operate with a v/c ratio of 0.972 during the PM peak hour, greater than the WSDOT-recommended maximum 0.9 v/c ratio for a roundabout approach. The SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (#2) intersection will operate with v/c ratios of 0.995 and 1.054 during the AM and PM peak hours, respectively, greater than the WSDOT-recommended maximum 0.9 v/c ratio for a roundabout approach. The 5th Avenue / Jantz Road (#3) intersection will operate at LOS F during the AM and PM peak hours, below the County LOS D standard. The US Highway 12 / Hanson Loop Road (#6) intersection will operate at LOS F during the PM peak hour, below the WSDOT LOS C standard. Mitigation alternatives for these intersections are discussed below in the Intersection Mitigation section.

### 3.4.9 2033 Future Conditions With Project (All Phases of Farmstead)

Table 13 describes the LOS for each intersection within the study area for the 2033 With Project (All Phases of Farmstead) conditions during the weekday AM and PM peak hours.

**Table 13. Estimated 2033 Level of Service With Project Conditions (All Phases of Farmstead)**

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
1	SR 124 / US Highway 12 WB Ramps (NB / SB RT)	v/c < 0.9	B	11.0	0.555	D	50.7	1.145
2	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (WB LT-TH)	v/c < 0.9	E	74.5	1.328	F	112.8	1.506
3	5th Avenue / Jantz Road (EB)	D	F	5489.7	6.173	See table footnote		
4	Jantz Road and Ray Boulevard / Humorist Road (NB / SB)	D	C	24.9	0.710	C	18.9	0.666

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
5	Quincy Road / Hanson Loop Road (SB)	C	A	9.0	0.034	A	9.3	0.033
6	US Highway 12 / Hanson Loop Road (EB / WB)	C	B	13.5	0.088	<b>F</b>	<b>77.1</b>	<b>0.187</b>
7	Quincy Road / North Drive (EB)	D	B	11.0	0.265	B	12.1	0.240
8	Quincy Road / South Drive (EB)	D	A	9.1	0.081	A	9.4	0.067
9	Hanson Loop Road / Red Lane (WB)	D	A	8.5	0.014	A	8.5	0.011

The 5th Avenue / Jantz Road (#3) intersection LOS analysis does not provide the LOS during the PM peak hour due to excessive delay and over-capacity conditions. It is estimated that the eastbound LOS is F with the eastbound lane as the critical lane with delay over 2,000 seconds per vehicle.

As shown in Table 13, five out of the nine studied intersections operate at an acceptable LOS during the 2033 Without Project conditions during the AM and PM peak hours.

The SR 124 / US Highway 12 WB Ramps (#1) intersection will operate with a v/c ratio of 1.145 during the PM peak hour, greater than the WSDOT-recommended maximum 0.9 v/c ratio for a roundabout approach. The SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (#2) intersection will operate with v/c ratios of 1.328 and 1.506 during the AM and PM peak hours, respectively, greater than the WSDOT-recommended maximum 0.9 v/c ratio for a roundabout approach. The 5th Avenue / Jantz Road (#3) intersection will operate at LOS F during the AM and PM peak hours, below the County LOS D standard. The US Highway 12 / Hanson Loop Road (#6) intersection will operate at LOS F during the PM peak hour, below the WSDOT LOS C standard. Mitigation alternatives for these intersections are discussed below in the Intersection Mitigation section.

### 3.4.10 2033 Future Conditions With Both Projects (All Phases of Both Estates)

Table 14 describes the LOS for each intersection within the study area for the 2033 With Both Projects (All Phases of Both Estates) conditions during the weekday AM and PM peak hours.

**Table 14. Estimated 2033 Level of Service With Both Projects Conditions (All Phases of Both Estates)**

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
1	SR 124 / US Highway 12 WB Ramps (WB / SB RT)	v/c < 0.9	B	17.1	0.765	<b>F</b>	<b>84.7</b>	<b>1.455</b>
2	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (WB LT-TH)	v/c < 0.9	<b>F</b>	<b>238.5</b>	<b>2.265</b>	<b>F</b>	<b>229.7</b>	<b>2.022</b>

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
3	5th Avenue / Jantz Road (EB)	D	See table footnote					
4	Jantz Road and Ray Boulevard / Humorist Road (NB / SB)	D	<b>F</b>	<b>143.5</b>	<b>1.236</b>	<b>F</b>	<b>99.7</b>	<b>1.135</b>
5	Quincy Road / Hanson Loop Road (SB)	C	A	9.1	0.051	A	9.4	0.044
6	US Highway 12 / Hanson Loop Road (EB / WB)	C	B	11.4	0.088	<b>F</b>	<b>88.7</b>	<b>0.211</b>
7	Quincy Road / North Drive (EB)	D	C	19.4	0.468	D	33.9	0.575
8	Quincy Road / South Drive (EB)	D	B	12.4	0.136	C	16.1	0.155
9	Hanson Loop Road / Red Lane (WB)	D	A	8.5	0.014	A	8.5	0.011

The 5th Avenue / Jantz Road (#3) intersection LOS analysis does not provide the LOS during the AM and PM peak hours due to excessive delay and over-capacity conditions. It is estimated that the eastbound LOS is F with the eastbound lane as the critical lane with delay over 2,000 seconds per vehicle.

As shown in Table 14, four out of the nine studied intersections operate at an acceptable LOS during the 2033 With Both Projects (All Phases of Both Estates) conditions during the AM and PM peak hours.

The SR 124 / US Highway 12 WB Ramps (#1) intersection will operate with a v/c ratio of 1.455 during the PM peak hour, greater than the WSDOT-recommended maximum 0.9 v/c ratio for a roundabout approach. The SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (#2) intersection will operate with v/c ratios of 2.265 and 2.022 during the AM and PM peak hours, respectively, greater than the WSDOT-recommended maximum 0.9 v/c ratio for a roundabout approach. The 5th Avenue / Jantz Road (#3) intersection will operate at LOS F during the AM and PM peak hours, below the County LOS D standard. The Jantz Road and Ray Boulevard / Humorist Road (#4) intersection will operate at LOS F during the AM and PM peak hours, below the County LOS D standard. The US Highway 12 / Hanson Loop Road (#6) intersection will operate at LOS F during the PM peak hour, below the WSDOT LOS C standard. Mitigation alternatives for these intersections are discussed below in the Intersection Mitigation section.

At the SR 124 / US Highway 12 WB Ramps Intersection, a modeling methodology adjustment was tested to check the intersection's sensitivity to certain inputs. With a background growth rate of 2%, the roundabout v/c ratio would be 1.049; however, with a background growth rate of 1%, consistent with the BBP TIA, the roundabout v/c ratio would be 0.867 or less. Since the BFCG model estimates no traffic growth on the local Burbank roadways, using a 1% growth rate appears reasonable. This finding suggests that the mitigations recommended with the BBP likely will provide adequate mitigation for the 2033 total traffic conditions, including trips from the BBP, Huntsman's Estates, and Farmstead. A conceptual graphic of the mitigated intersection is provided in Appendix E.

### **3.5 Intersection Mitigation**

The LOS analyses above anticipate that five studied intersections will operate below the applicable operation standards during one or more future scenario. Mitigation improvements are required at these locations to maintain acceptable operations. All the following mitigation discussions reference the 2033 With Both Projects scenario to match the estimated BBP build-out year and to assess the mitigation responsibilities among all three projects (Farmstead, Huntsman's Estates, and the BBP).

Two of the deficient intersections are recommended for improvements within the BBP TIA, so, for consistency, this section evaluates these intersections with the recommended mitigation improvements in place. At the other three deficient intersections, new mitigation alternatives are evaluated for their effectiveness. This section recommends mitigation approaches for all five intersections.

One modeling methodology adjustment was applied to the mitigated scenarios. Because of the increased traffic from the BBP in-process project and the Farmstead and Huntsman's Estates projects, the PHF was adjusted to 1.0 at the WSDOT-controlled intersections and to 0.92 at all other intersections. This PHF adjustment is consistent with the BBP TIA approach. This adjustment alone did not bring the LOS results back within the applicable standards, so additional capacity improvements were evaluated.

One adjustment was made to the project trip inputs for these mitigated scenarios. Subsequent to completing the Level of Service Analyses above, PBS received an updated site plan for the Farmstead project. The revised Farmstead lot layout includes 468 dwelling units, representing an increase of 25 units from the conditions evaluated above. This updated lot plan is projected to generate an additional 14 trips in the AM peak hour and 21 trips during the PM peak hour. The intersection mitigation sections below address the 2033 With Both Projects scenario with these increased trips. Note that this increase in proposed dwelling units will not cause any additional operational deficiencies beyond those already noted.

#### **3.5.1 SR 124 / US Highway 12 WB Ramps Intersection**

The SR 124 / US Highway 12 WB Ramps (#1) intersection shows a v/c ratio exceeding 0.9 in the southbound right-turn lane during the future PM peak hour. PBS finds that modeling the lane as a continuous right-turn lane, with an added westbound receiving lane on the on-ramp that merges downstream into the existing lane, would improve the intersection operations to an acceptable v/c ratio of 0.777 or less for all scenarios and peak hours. A conceptual graphic of the mitigated intersection is provided in Appendix E.

#### **3.5.2 SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps Intersection**

The SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (#2) intersection shows high delays and over-capacity conditions, most especially in the westbound shared left-through lane, during the future AM and PM peak hours. Consistent with the BBP TIA, the intersection was modeled with a two-lane roundabout with two northbound circulating lanes and two westbound circulating lanes. Although these mitigations will reduce the intersection delay and LOS to acceptable levels (LOS B and C in the AM and PM peak hours, respectively), the v/c ratio would remain above 0.9 during the PM peak hour.

#### **3.5.3 5th Avenue / Jantz Road Intersection**

The 5th Avenue / Jantz Road (#3) intersection shows high delays and over-capacity conditions, most especially on the eastbound approach, during the future AM and PM peak hours. Consistent with the BBP TIA, the intersection was modeled with a traffic signal with an added southbound right-turn lane and with a westbound right-turn lane with an additional northbound receiving lane. This mitigation would improve the intersection operations from LOS F (during both AM and PM peak hours) to LOS C (AM) and LOS B (PM) with the v/c ratio

under 1.0 during the AM and PM peak hours. No additional mitigation improvements beyond those already considered are required to achieve acceptable intersection operations. A conceptual graphic of the mitigated intersection is provided in Appendix E.

This mitigation finding relies upon the BBP TIA, which anticipated constructing and generating traffic on a new west leg of the 5th Avenue / Jantz Road intersection. The mitigation has been refined updated in the Sensitivity Analysis section below.

#### **3.5.4 Jantz Road and Ray Boulevard / Humorist Road Intersection**

The Jantz Road and Ray Boulevard / Humorist Road (#4) intersection shows high delays and over-capacity conditions, most especially on the northbound and southbound approaches, during the future AM and PM peak hours, respectively. PBS finds that changing the stop-controlled legs to the eastbound and westbound legs, which will have significantly lower volumes than the northbound and southbound legs as the Farmstead and Huntsman's Estates projects develop, would improve the intersection operations to an acceptable LOS D for all scenarios and peak hours. A conceptual graphic of the mitigated intersection is provided in Appendix E.

PBS also finds that reconfiguring the stop controls at the intersection could compromise drivers' sight lines. Free-flowing northbound and southbound drivers may not clearly see the intersection as they approach through horizontal curves, which could adversely impact intersection safety, especially for pedestrians crossing Jantz Road or Ray Boulevard. Stopped eastbound and westbound drivers may not clearly see the approaching traffic in time to adequately judge the gaps in cross traffic. Additional verification of the driver sight lines, and possibly additional pedestrian safety improvements, are merited.

#### **3.5.5 US Highway 12 / Hanson Loop Road Intersection**

The US Highway 12 / Hanson Loop Road (#6) intersection shows high delays on the eastbound and westbound approaches during the PM peak hour. All turns from the stop-controlled approaches are provided acceleration and merge lanes along US Highway 12. The critical delay is 74.6 seconds per vehicle in the 2033 Without Project conditions, which sets the mitigation target for the proposed project.

The Farmstead project is anticipated to add eastbound right turns and northbound left turns at the intersection. PBS finds that widening the eastbound approach to provide an exclusive eastbound right-turn lane would reduce the critical delay from 88.7 seconds to 68.1 seconds during the 2033 With Project PM peak hour. A conceptual graphic of the mitigated intersection is provided in Appendix E.

Additional improvements could involve restricting the eastbound and/or westbound turning movements or modifying the intersection traffic control. These improvements should be implemented only if the background growth rate of the intersection is observed to match the assumed 2% background growth. WSDOT would require a formal intersection control evaluation before pursuing such modifications.

#### **3.5.6 Mitigation Results and Next Steps**

The mitigation recommendations discussed in the sections above were evaluated for their effectiveness at mitigating the intersection operations deficiencies forecast for the 2033 With Both Projects conditions. Table 15 presents the mitigated LOS results for the five deficient intersections. The mitigated LOS calculations are provided in Appendix E.

**Table 15. Estimated 2033 Mitigated Level of Service With Both Projects Conditions**

Int. #	INTERSECTION MITIGATION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
1	SR 124 / US Highway 12 WB Ramps With SB RT continuous movement and added merge lane to WB on-ramp (NB)	v/c < 0.9	B	14.6	0.713	B	16.9	0.781
2	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps With added WB and NB lanes and 1% background growth (WB LT-TH)	v/c < 0.9	A	7.9	0.594	B	12.7	0.880
3	5th Avenue / Jantz Road With traffic signal and added SB and WB lanes and added NB receiving lane (SB LT)	D	C	27.7	1.00	B	19.8	0.94
4	Jantz Road and Ray Boulevard / Humorist Road With TWSC on east and west legs (EB / SB)	D	D	28.1	0.270	D	28.4	0.160
6	US Highway 12 / Hanson Loop Road With added EB RT lane (EB LT-TH)	C	C	21.9	0.090	<b>F</b>	<b>68.1</b>	<b>0.257</b>

TWSC: two-way stop-control

As shown in Table 15, the mitigation improvements discussed above can mitigate the intersection operations to fall within acceptable ranges except the US Highway 12 / Hanson Loop Road intersection, which, as also discussed above, is required only to be mitigated back to the Without Project conditions.

To achieve the following mitigations, it is recommended that the Farmstead developer and the Huntsman's Estates developer negotiate a cost-sharing arrangement by which the burden of mitigation is shared equitably. The following mitigation improvements would be shared by both parties since both contribute trips at the deficient intersections:

- At the Jantz Road and Ray Boulevard / Humorist Road intersection:
  - Reassign the stop-control to the eastbound and westbound movements.
  - Add high-visibility crosswalk features to both existing marked crosswalks.

- Install rectangular rapid-flashing beacons (RRFB) alongside the crosswalk of the north leg to alert approaching drivers of pedestrians in the crosswalk.
  - Address site distance at the northwest and southeast corners.
- At the US Highway 12 / Hanson Loop Road intersection:
  - Widen the eastbound approach to provide a shared left-through lane and an exclusive right-turn lane.

To achieve the following mitigations, it is recommended that the Farmstead developer contact the Port of Walla Walla and the Huntsman's Estates developer to negotiate a cost-sharing arrangement by which the burden of mitigation is shared equitably. The following mitigation improvements would be shared by the three parties since all contribute trips at the deficient intersections:

- At the SR 124 / US Highway 12 WB Ramps intersection:
  - Construct a westbound receiving lane departing the intersection to the US Highway 12 on-ramp.
  - Reconfigure the southbound right-turn movement to flow freely into the added lane, then to merge into the existing lane downstream before merging into the US Highway 12 mainline.
- At the SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps intersection, consistent with the recommendation in the BBP TIA:
  - Expand the south leg roadway provide two travel lanes in each direction.
  - Designate the outer northbound approach lane exclusively for right turns to the eastbound US Highway 12 on-ramp.
  - Expand the roundabout to provide two circulating lanes.
  - Reconfigure the westbound approach to allow left turns from both approach lanes.
- At the 5th Avenue / Jantz Road intersection, consistent with the recommendation in the BBP TIA:
  - Install a traffic signal with an exclusive southbound left-turn lane and a westbound right-turn lane with a receiving lane.

*Findings:* A continuous southbound right-turn lane at the SR 124 / US Highway 12 WB Ramps intersection will bring the intersection to operate at an acceptable LOS in the 2033 PM With Both Projects conditions.

A two-lane roundabout and two circulating roundabout lanes at the SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps intersection will bring the intersection to operate at an acceptable LOS in the 2033 With Both Projects conditions in the AM and PM peak hours.

Changing the intersection control from two-way stop-control (TWSC) to signal at the 5th Avenue / Jantz Road intersection with an added southbound left-turn lane and an added westbound right-turn lane with a receiving lane will bring the intersection to operate at an acceptable LOS in the 2033 With Both Projects conditions in the AM and PM peak hours.

Changing the intersection control at the Jantz Road and Ray Boulevard / Humorist Road intersection to allow for northbound and southbound free-flowing movement with the east and west legs stop-controlled will

bring the intersection to operate at an acceptable LOS in the 2033 With Both Projects conditions during the AM and PM peak hours.

Widening the eastbound approach at the US Highway 12 / Hanson Loop Road intersection to provide an exclusive eastbound right-turn lane would mitigate the impacts generated by the Farmstead project.

*Recommendations:* Negotiate an equitable cost-sharing arrangement between the Farmstead developer and the Huntsman's Estates developer to achieve the following mitigations to which both parties' projects contribute.

- At the US Highway 12 / Hanson Loop Road intersection, widen the eastbound approach to provide a shared left-through lane and an exclusive right-turn lane.
- At the Jantz Road and Ray Boulevard / Humorist Road intersection:
  - Reassign the stop-control to the eastbound and westbound movements.
  - Add high-visibility crosswalk features to both existing marked crosswalks.
  - Install rectangular rapid-flashing beacons (RRFB) alongside the crosswalk of the north leg to alert approaching drivers of pedestrians in the crosswalk.
  - Address site distance at the northwest and southeast corners.

Negotiate an equitable cost-sharing arrangement among the Farmstead developer, the Port of Walla Walla, and the Huntsman's Estates developer to achieve the following mitigations to which all three parties' projects contribute.

- At the SR 124 / US Highway 12 WB Ramps intersection:
  - Construct a westbound receiving lane departing the intersection to the US Highway 12 on-ramp.
  - Reconfigure the southbound right-turn movement to flow freely into the added lane, then to merge into the existing lane downstream before merging into the US Highway 12 mainline.
- At the SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps intersection, consistent with the recommendation in the BBP TIA:
  - Expand the south leg roadway provide two travel lanes in each direction.
  - Designate the outer northbound approach lane exclusively for right turns to the eastbound US Highway 12 on-ramp.
  - Expand the roundabout to provide two circulating lanes.
  - Reconfigure the westbound approach to allow left turns from both approach lanes.
- At the 5th Avenue / Jantz Road intersection, consistent with the recommendation in the BBP TIA:
  - Install a traffic signal with an exclusive southbound left-turn lane and a westbound right-turn lane with a receiving lane.

WSDOT should monitor growth at the SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps and US Highway 12 / Hanson Loop Road intersections to ensure the intersections operate at an acceptable LOS and v/c ratio.

### 3.6 Sensitivity Analysis

The purpose of this sensitivity analysis is to identify what portion of the Farmstead and Huntman's Estates projects could be built before mitigation might be required at one of the study intersections. This sensitivity analysis does not assume any of the mitigations discussed above to be in place; it relies upon the current intersection controls and configurations as does the Level of Service Analyses section earlier in this TIA. None of the three access intersections were found to drop below the adopted LOS standard, so they are omitted from this sensitivity analysis.

As part of the sensitivity analysis, three adjustments were made to the analysis model inputs and assumptions.

- The County approval of the BBP project requires the Port of Walla Walla to reevaluate the project's traffic impacts after 40% of its projected trips are generated. In other words, no mitigation is required before at least 40% of the BBP trips are generated. Therefore, this sensitivity analysis assumes only 40% of the BBP trips to be traveling on the roadway network.
- Recent amendments to the BBP BSP do not include the west leg to the 5th Avenue / Jantz Road intersection as originally assumed in the BBP TIA. Therefore, the sensitivity analysis refines the LOS analyses above by omitting the west leg of the intersection and redistributing the BBP trips accordingly.
- The background growth rate was reduced from 2% per year to 1% per year. This adjustment better aligns with the BFCG forecast models and with the BBP TIA assumptions.

The sensitivity analysis increased the number of trips generated by the proposed dwelling units and checked the study intersections' LOS until it dropped below the applicable operational standard at any one location. The first trial was with the proposed Phase 1 for both Farmstead Estates and Huntsman Estates, and the results are shown below in Table 16.

Table 16 presents the LOS results for the study intersection in 2025 with 40% of the BBP built out and Phase 1 of both Farmstead and Huntsman Estates (470 combined dwelling units). The amended BBP BSP and the LOS calculations are provided in Appendix G.

**Table 16. Estimated 2025 Level of Service with Both Projects Conditions (Phase 1 of Both Estates), 40% BBP Trips, and Amended BBP BSP**

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
1	SR 124 / US Highway 12 WB Ramps (NB / SB RT)	v/c < 0.9	A	8.4	0.455	A	9.0	0.606
2	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (WB)	v/c < 0.9	A	6.7	0.544	A	7.3	0.640
3	5th Avenue / Jantz Road (WB)	D	C	15.6	0.574	D	29.7	0.798
4	Jantz Road and Ray Boulevard / Humorist Road (NB / SB)	D	C	18.4	0.611	C	16.0	0.592

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
5	Quincy Road / Hanson Loop Road (SB)	C	A	9.0	0.032	A	9.3	0.031
6	US Highway 12 / Hanson Loop Road (EB / WB)	C	B	10.0	0.047	<b>D</b>	<b>30.7</b>	<b>0.059</b>

As found in the 2025 Without Project conditions, the US Highway 12 / Hanson Loop Road intersection operates below the WSDOT LOS standard C during the PM peak hour. All other studied intersections remain within the applicable LOS standard in the 2025 With Phase 1 of Both Projects conditions and approximately 40% of the BBP build-out during the AM and PM peak hour.

The sensitivity analysis continued to increase the number of dwelling units in both projects beyond their Phase 1 values until one or another intersection LOS dropped below standards. Through these iterations, the 5th Avenue / Jantz Road intersection was found to be the most sensitive intersection impacted by new trips from the proposed Farmstead and Huntsman's Estates projects; in other words, it dropped below its applicable operational standard (LOS D) before any other study intersection.

Table 17 presents the 2025 LOS results for the study intersections at the highest number of dwelling units that can be built without the 5th Avenue / Jantz Road exceeding the County's LOS D standard. The results in Table 17 also include 40% of the BBP built out and the BBP BSP amended. The amended BBP BSP and the LOS calculations are provided in Appendix G.

**Table 17. 2025 LOS With 500 Dwelling Units, 40% BBP Trips, and Amended BBP BSP**

Int. #	INTERSECTION (Critical lane group, AM / PM)	LOS Standard	AM Peak Hour			PM Peak Hour		
			LOS	Delay (sec/veh)	v/c	LOS	Delay (sec/veh)	v/c
1	SR 124 / US Highway 12 WB Ramps (NB / SB RT)	v/c < 0.9	A	8.5	0.462	A	9.1	0.609
2	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps (WB)	v/c < 0.9	A	6.8	0.552	A	7.4	0.654
3	5th Avenue / Jantz Road (WB)	D	C	15.9	0.591	D	33.3	0.829
4	Jantz Road and Ray Boulevard / Humorist Road (NB / SB)	D	C	22.8	0.699	C	16.6	0.616
5	Quincy Road / Hanson Loop Road (SB)	C	A	9.0	0.035	A	9.3	0.031
6	US Highway 12 / Hanson Loop Road (EB / WB)	C	B	11.3	0.065	<b>D</b>	<b>31.1</b>	<b>0.060</b>

As found in the 2025 Without Project conditions, the US Highway 12 / Hanson Loop Road intersection operates below the WSDOT LOS standard C during the PM peak hour. All others studied intersections remain within the applicable LOS standards in the 2025 conditions. Up to 500 dwelling units (combined between the Farmstead and Huntsman's Estates projects) can be built out in the 2025 conditions, before another study intersection LOS drops below standards during either the AM or PM peak hour. The trips generated by additional dwelling units would cause the 5th Avenue / Jantz Road intersection to operate at LOS E, below the County's LOS D standard.

For full buildout of the Farmstead and Huntsman's Estates projects, the improvements recommended above in the Intersection Mitigation section still apply.

*Findings:* Up to 500 dwelling units can be built out at the Farmstead and Huntsman's Estates projects until the 5th Avenue / Jantz Road intersection operates below the acceptable LOS in the 2025 With Project PM peak hour conditions. This finding relies upon the amended BBP BSP and a 1% annual background growth rate.

WSDOT should monitor growth at the US Highway 12 / Hanson Loop Road intersections to ensure the intersection operates at an acceptable LOS and v/c ratio.

*Recommendation:* With the mitigation at the US Highway 12 / Hanson Loop Road, 500 dwelling units should be approved for the Farmstead Estates and Huntsman Estates projects. The developers may determine the equitable division of the 500 dwelling units; PBS suggests they could be split equally between the projects, with 250 units for each. Additional traffic mitigation should be evaluated and approved before more than 500 dwelling units are approved.

## 4 SAFETY ANALYSIS

### 4.1 Collision Analysis

Collision data from the study area were obtained from WSDOT for the five-year period spanning from January 2016 through December 2020. This analysis assumes that a collision rate less than the critical collision rate for the intersection is typically considered to be within acceptable parameters. A collision rate above the critical rate is worthy of further examination. The detailed collision data are provided in Appendix F. Table 18 presents the results of the collision analysis.

**Table 18. Collision Analysis for Study Area Intersections (January 1, 2016, through December 31, 2020)**

Int. #	Intersection	Collision Type						Total Collisions	Critical Rate	Collision Rate
		Rear-end	Angle	Object	Side-swipe	Head-on	Other			
1	SR 124 / US Highway 12 WB Ramps	1	2	5	-	1	3	12	0.88	0.71
2	SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps	-	1	2	1	-	-	4	0.92	0.31
3	5th Avenue / Jantz Road	2	-	-	-	-	1	3	0.99	0.39
4	Jantz Road and Ray Boulevard / Humorist Road	-	1	-	-	-	-	1	1.12	0.26
5	Quincy Road / Hanson Loop Road	-	-	-	-	-	-	0	1.31	0
6	US Highway 12 / Hanson Loop Road	-	1	-	-	-	-	1	0.83	0.04
7	Quincy Road / North Drive	-	-	-	-	-	-	0	1.38	-
8	Quincy Road / South Drive	-	-	-	-	-	-	0	1.38	-
9	Hanson Loop Road / Red Lane	-	-	-	-	-	-	0	1.41	-

To calculate the collision rate, the PM peak hour total entering volumes from the existing TMCs were multiplied by 10 to provide an approximation of the average daily trips. Detailed calculations of the critical rates and collision rates are provided in Appendix F.

The collision rate is below the critical rate at all the studied intersections.

At the SR 124 / US Highway 12 WB Ramps intersection, the pattern of object collisions is notable. Of the 12 total collisions at the intersection, five of them were object collisions with the roundabout curb or traffic island. If this pattern recurs in the future, PBS recommends WSDOT evaluate the intersection conditions and install advisory speed signage for all approaches.

*Findings:* The collision rate is below the collision rate at all the studied intersections. A pattern of object collisions at the SR 124 / US Highway 12 WB Ramps intersection is notable.

*Recommendations:* WSDOT should evaluate the intersection conditions and install advisory speed signage for all approaches at the SR 124 / US Highway 12 WB Ramps intersection.

#### **4.2 Pedestrian, Bicycle, and Public Transportation Facilities**

Pedestrian, bicycle, and transit facilities are not available for future residents to travel between the project site and the schools and businesses to the north. The nearest improved pedestrian facilities are located on the north side of the Jantz Road and Ray Boulevard / Humorist Road intersection, approximately 0.5 mile from the Farmstead site as measured along the existing roadways. Any potential pedestrian connection through the adjoining neighborhood to the north—for example, via Apple Lane and Harrison Road—would be approximately the same distance. The total distance to the Columbia School District schools along Maple is at least 1.0 to 1.2 miles, plus walking distance within Farmstead. Given these distances, it is likely that students living within Farmstead will be offered school bus transportation.

Sidewalks will be provided throughout the proposed site. All driveways, sidewalks, crosswalks, and curb ramps constructed or modified with the development should be compliant with the current Americans with Disabilities Act (ADA) guidelines. Quincy Road will include frontage improvements that include sidewalks.

*Finding:* Pedestrian, bicycle, and transit facilities are not readily available for future subdivision residents in the study area. A gap of approximately 0.5 mile exists between the Farmstead site and the nearest improved pedestrian facilities. It is likely that students living within Farmstead will be offered school bus transportation.

*Recommendation:* Construct standard frontage improvements, including sidewalks, along Quincy Road. Assure all driveways, sidewalks, crosswalks, and curb ramps constructed with the subdivision project comply with current ADA guidelines.

#### **4.3 Sight Distance at Site Access Locations**

Two of three of the proposed Farmstead site accesses (South Drive and Red Lane) currently exist as gravel road driveways. South Drive is a gravel roadway that intersects Quincy Road and Red Lane is a gravel driveway that serves two existing properties fronting on Hanson Loop Road. The North Drive site access will intersect Quincy Road and does not currently exist. All sight distances were evaluated graphically. The generally flat terrain, straight alignment on both Quincy Road and Hanson Loop Road with a 35 mile per hour (mph) posted speed on Quincy Road and 25-mph posted speed on Hanson Loop Road suggest that adequate sight distances may be achievable through design and construction of the proposed site access intersections on both roadways.

All proposed site accesses should be designed in accordance with Chapter 3.4 of the Walla Walla County Road Standards (September 8, 2015), based on the accessed roadways' respective posted speeds. Based on the current 35-mph posted speed on Quincy Road and Hanson Loop Road, the proposed site access must have the following intersection sight distance (ISD) standard:

At Quincy Road / North Drive and Quincy Road / South Drive (Proposed Site Accesses):

- At least 390 feet of ISD to the north and south for a left turn from the eastbound site access onto northbound Quincy Road.
- At least 335 feet of ISD to the north and south for a right turn from the eastbound site access onto southbound Quincy Road.

At Hanson Loop Road / Red Lane (Proposed Site Access):

- At least 390 feet of ISD to the north and south for a left turn from the westbound site access onto southbound Hanson Loop Road.
- At least 335 feet of ISD to the north and south for a right turn from the westbound site access onto northbound Hanson Loop Road.

*Findings:* Review of the current conditions along Quincy Road and Hanson Loop Road suggests that adequate ISD is available.

*Recommendations:* Design the proposed site access intersections in accordance with Walla Walla County Road Standards guidelines for ISD based on the posted speed. Install no objects within the sight distance triangles that would block exiting drivers' view of approaching traffic.

## 5 STUDY FINDINGS

The findings of this TIA are summarized below from the foregoing narrative.

### 5.1 Present Traffic Volumes

ATD collected the data on January 20, 2022, at the following intersections, which had a typical school schedule:

- SR 124 / US Highway 12 WB Ramps
- SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps
- 5th Avenue / Jantz Road
- Jantz Road and Ray Boulevard / Humorist Road
- Quincy Road / Hanson Loop Road
- US Highway 12 / Hanson Loop Road
- Quincy Road / South Drive (South Drive exists as a gravel roadway)
- Hanson Loop Road / Red Lane (Red Lane exists as a driveway that serves two lots)

TMCs at the Quincy Road / South Drive intersection were used to estimate the northbound and southbound through trips that will travel past the future North Drive site access.

### 5.2 In-Process Projects

The Burbank Business Park (BBP) TIA was identified for inclusion in this TIA.

### 5.3 Future Traffic Volumes

Background growth is a generic increase in traffic volumes that either is not attributable to specific developments or is attributable to influences outside the study area. An annually compounded background growth rate of 2% was calculated based on the BFCG 2025 and 2045 model link volumes.

### 5.4 Trip Generation

When fully built out and occupied in 2028, the development is anticipated to generate 3,968 vehicle trips on a typical weekday, including 289 trips during the AM peak hour and 403 trips during the PM peak hour.

### 5.5 Access and Circulation

The distribution of site trips to the access intersection are based on the lots with the shortest path to either Quincy Road or Hanson Loop Road. The site trips will be distributed from the site with 70% using North Drive, 24% using South Drive, and 6% using Hanson Loop Road.

### 5.6 Intersection Performance

- All studied intersections currently operate at an acceptable LOS during the weekday AM and PM peak hours.
- Seven out of the nine studied intersections operate at an acceptable LOS during the 2025 With Both Projects (Phase 1 of Both Estates) conditions during the AM and PM peak hours.
- Four out of the nine studied intersections operate at an acceptable LOS during the 2028 and 2033 With Both Projects (All Phases of Both Estates) conditions during the AM and PM peak hours.
- The SR 124 / US Highway 12 WB Ramps intersection operates below the acceptable LOS during the 2028 and 2033 With Both Projects (All Phases of Both Estates) conditions during the peak hour.

- The SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps intersection operates below the acceptable LOS during the 2028 and 2033 With Both Projects (All Phases of Both Estates) conditions during the AM and PM peak hours.
- The 5th Avenue / Jantz Road intersection operates below the acceptable LOS during the 2025, 2028, and 2033 With Both Projects (All Phases of Both Estates) conditions during the AM and PM peak hours.
- The US Highway 12 / Hanson Loop Road intersection operates below the acceptable LOS during the 2025, 2028, and 2033 With Both Projects (All Phases of Both Estates) conditions during the PM peak hour. The Farmstead and Huntsman's Estates projects do not contribute trips to the failing movement at the US Highway 12 / Hanson Loop Road intersection.
- WSDOT should monitor growth at the SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps and US Highway 12 / Hanson Loop Road intersections to ensure the intersections operate at an acceptable LOS and v/c ratio.

## 5.7 Intersection Mitigation

- A continuous southbound right-turn lane at the SR 124 / US Highway 12 WB Ramps intersection will bring the intersection to operate at an acceptable LOS in the 2033 PM With Both Projects conditions.
- A two-lane roundabout and two circulating roundabout lanes at the SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps intersection will bring the intersection to operate at an acceptable LOS in the 2033 With Both Projects conditions in the AM and PM peak hours.
- Changing the intersection control at the Jantz Road and Ray Boulevard / Humorist Road intersection to allow for northbound and southbound free-flowing movement with the east and west legs stop-controlled will bring the intersection to operate at an acceptable LOS in the 2033 With Both Projects conditions during the AM and PM peak hours.
- Widening the eastbound approach at the US Highway 12 / Hanson Loop Road intersection to provide an exclusive eastbound right-turn lane will mitigate the impacts generated by the Farmstead project.

## 5.8 Sensitivity Analysis

Up to 500 dwelling units can be built out at the Farmstead and Huntsman's Estates projects until the 5th Avenue / Jantz Road intersection operates below the acceptable LOS in the 2025 With Project PM peak hour conditions. This finding relies upon the amended BBP BSP and a 1% annual background growth rate.

WSDOT should monitor growth at the US Highway 12 / Hanson Loop Road intersections to ensure the intersection operates at an acceptable LOS and v/c ratio.

## 5.9 Collision Analysis

The collision rate is below the critical collision rate at all the studied intersections. A pattern of object collisions at the SR 124 / US Highway 12 WB Ramps intersection is notable.

## 5.10 Pedestrian, Bicycle Facilities, and Public Transportation

Pedestrian, bicycle, and transit facilities are not readily available for future subdivision residents in the study area. A gap of approximately 0.5 mile exists between the Farmstead site and the nearest improved pedestrian facilities. It is likely that students living within Farmstead will be offered school bus transportation.

### **5.11 Sight Distance at Site Access Locations**

Review of the current conditions along Quincy Road and Hanson Loop Road suggests that adequate ISD is available.

## 6 RECOMMENDATIONS

The traffic impact analysis supports the following recommendations.

### 6.1 Sensitivity Analysis

Negotiate an equitable cost-sharing arrangement between the Farmstead developer and the Huntsman's Estates developer to achieve the following mitigations to which both parties' projects contribute.

- At the US Highway 12 / Hanson Loop Road intersection, widen the eastbound approach to provide a shared left-through lane and an exclusive right-turn lane.
- The County should approve 500 dwelling units (combined) for the Farmstead Estates and Huntsman Estates projects. The developers may determine the equitable division of the 500 dwelling units; PBS suggests they could be split equally between the projects, with 250 units for each. Additional traffic mitigation should be evaluated and approved before more than 500 dwelling units are approved.

### 6.2 Intersection Mitigation for Full Buildout

Negotiate an equitable cost-sharing arrangement between the Farmstead developer and the Huntsman's Estates developer to achieve the following mitigation to which both parties' projects contribute. This mitigation would apply after more than 500 dwelling units are permitted.

- At the Jantz Road and Ray Boulevard / Humorist Road intersection:
  - Reassign the stop-control to the eastbound and westbound movements.
  - Add high-visibility crosswalk features to both existing marked crosswalks.
  - Install rectangular rapid-flashing beacons (RRFB) alongside the crosswalk of the north leg to alert approaching drivers of pedestrians in the crosswalk.
  - Address site distance at the northwest and southeast corners.

### 6.3 Intersection Mitigation Shared with Port of Walla Walla

Negotiate an equitable cost-sharing arrangement among the Farmstead developer, the Port of Walla Walla, and the Huntsman's Estates developer to achieve the following mitigations to which all three parties' projects contribute. These mitigations would apply after more than 500 dwelling units are permitted.

- At the SR 124 / US Highway 12 WB Ramps intersection:
  - Construct a westbound receiving lane departing the intersection to the US Highway 12 on-ramp.
  - Reconfigure the southbound right-turn movement to flow freely into the added lane, then to merge into the existing lane downstream before merging into the US Highway 12 mainline.
- At the SR 124 and 5th Avenue / Gateway Road and US Highway 12 EB Ramps intersection, consistent with the recommendation in the BBP TIA:
  - Expand the south leg roadway provide two travel lanes in each direction.
  - Designate the outer northbound approach lane exclusively for right turns to the eastbound US Highway 12 on-ramp.
  - Expand the roundabout to provide two circulating lanes.
  - Reconfigure the westbound approach to allow left turns from both approach lanes.
- At the 5th Avenue / Jantz Road intersection, consistent with the recommendation in the BBP TIA:

- Install a traffic signal with an exclusive southbound left-turn lane and a westbound right-turn lane with a receiving lane.

#### **6.4 Collision Analysis**

WSDOT should evaluate the intersection conditions and install advisory speed signage for all approaches at the SR 124 / US Highway 12 WB Ramps intersection.

#### **6.5 Pedestrian, Bicycle, and Public Transportation Facilities**

Construct standard frontage improvements, including sidewalks, along Quincy Road. Assure all driveways, sidewalks, crosswalks, and curb ramps constructed with the subdivision project comply with current ADA guidelines.

#### **6.6 Sight Distance at Site Access Location**

Design the proposed site access intersections in accordance with American Association of State Highway and Transportation Officials guidelines for ISD based on the posted speed. Install no objects within the sight distance triangles that would block exiting drivers' view of approaching traffic.

ALL TRAFFIC DATA SERVICES  
(303) 216-2439  
[www.alltrafficdata.net](http://www.alltrafficdata.net)

**Peak 15-Minutes:** 04:55 PM - 05:10 PM

**Motorized Vehicles**

Direction	Volume (Vehicles)	Turning Movement Percentages (%)
Northbound (Janz Rd)	128	0.80
Southbound (Janz Rd)	82	0.79
Eastbound (Humourist Rd)	61	0.77
Westbound (Humourist Rd)	103	0.53

Additional turning movement percentages shown in the diagram:

- Northbound: 0% (left), 48% (through), 11% (right)
- Southbound: 0% (left), 31% (through), 2% (right)
- Eastbound: 0% (left), 7% (through), 54% (right)
- Westbound: 0% (left), 4% (through), 3% (right)

A diagram of a person standing in the center of a square room. The person is facing North (N), with West (W) to their left, East (E) to their right, and South (S) behind them. The room is bounded by four walls. On each wall, there are two vertical arrows pointing away from the center, labeled with the number 0. Additionally, there are four horizontal arrows pointing towards the center from each wall, also labeled with the number 0. This represents a state of zero net force and zero net torque on the person.

[illegible]

A diagram of a person standing in the center of a square room. The person is facing North (N), with West (W) to their left, East (E) to their right, and South (S) behind them. The room is bounded by four walls. On each wall, there are two vertical arrows pointing away from the center, one above and one below the center line. Each of these four arrows is labeled with the number '0'. Additionally, there are four horizontal arrows pointing towards the center from each wall, one on the left and one on the right of the center line. Each of these four arrows is also labeled with the number '0'.

# Project Impacts

This section of the analysis documents project-generated impacts within the study area. First, peak hour traffic volumes are estimated for the project and then distributed and assigned to adjacent roadways and intersections within the study area. Next, project traffic is added to the 2033 forecast baseline volumes. The impact analysis then describes the impact to traffic volumes, traffic operations, and traffic safety.

## Trip Generation

Project trip generation was estimated based on equations published by the Institute of Transportation Engineers (ITE) in *Trip Generation* (9th Edition, 2012). The trip generation estimate for the development is based on a mix of uses anticipated at full buildout. The trip generation was based on the site as a whole, although development will take place at a parcel level. The land uses include Shopping Center (LU 820), Business Park (LU 770), and Industrial Park (LU 130). Based on the mix of land uses both pass-by trips and internal trips were accounted for.

Pass-by trips represent trips that are currently passing by the site. With the addition of the proposed development, these trips would stop at the site before continuing on their way. As such, the trips do not represent new trips to the adjacent roadway system. Due to the limited traffic on the streets adjacent to the site, the majority of pass-by trips were *diverted* from SR 12. The assignment of traffic from SR 12 and the local streets adjacent to the site were based on the relative volumes on each of the adjacent roadways. Internal trips are those that occur between uses internal to the site. The *ITE Trip Generation Handbook* contains information related to potential internalization between uses. Based on the mix of land uses, ITE procedures suggest an internal capture rate of approximately five percent during the weekday PM peak hour. A five percent internal capture was also assumed for the weekday AM peak hour.

**Table 4** shows the resulting weekday AM and PM peak hour vehicle trip generation for the business park.

**Table 4. Trip Generation Summary – Weekday AM and PM Peak Hour**

Land Use	Size	Trip Rate <sup>1</sup>	Internal Trips	Pass-by Trips	New Peak Hour Trips		
					Total	In	Out
<b>Weekday AM Peak Hour</b>							
Industrial (LU 130)	53.2 Acres	EQN	-20	0	352	299	53
Shopping Center (LU 820)	186,200 sf	EQN	-10	-72	146	99	47
Business Park (LU 770)	434,400 sf	EQN	-32	0	559	486	73
Total			-62	-72	1,057	884	173
<b>Weekday PM Peak Hour</b>							
Industrial (LU 130)	53.2 Acres	EQN	-20	0	352	68	284
Shopping Center (LU 820)	186,200 sf	EQN	-46	-296	567	264	303
Business Park (LU 770)	434,400 sf	EQN	-28	0	525	131	394
Total			-94	-296	1,444	463	981

1. Trips rates from ITE Trip Generation Manual, 9<sup>th</sup> Edition.

As shown in **Table 4**, the development is anticipated to generate 1,057 net new weekday AM peak hour trips and 1,444 net new weekday PM peak hour trips.

95th percentile queues of 80 feet during the weekday AM peak hour and 580 feet during the weekday PM peak hour. PM peak hour queues would likely extend to the intersection of 5th Street / Jantz Road.

## Mitigation

This section documents the recommended traffic mitigation to address impacts identified. The locations where traffic operations are forecasted to be impacted by the project include the SR 124 / SR 12 EB Ramp, the 5th Street / Jantz Road intersection, and the local roadway network. Specific details are discussed below and a master improvement figure illustrating the proposed mitigation is shown in [Figure 6](#).

### **SR 124 / SR 12 EB Ramp**

Based on the LOS and anticipated queue impacts at the intersection of SR 124 / SR 12 EB Ramp a review of potential mitigation was completed to improve LOS and reduce queues on the eastbound ramp during the weekday AM and PM peak hour. The following mitigation, would reduce queues to approximately 600 feet or less on the ramp and approximately 100 feet or less at the northbound approach during the peak periods:

- Re-configure roundabout to have two circulating lanes
- Add entry and exit lane at the northbound approach
- Re-configure off-ramp to allow for both lanes to circulate through the roundabout

These improvements would improve LOS at the intersection to LOS C during the weekday AM peak hour and LOS B during the weekday PM peak hour and reduce all forecasted queuing to a level that can be accommodated within the future capacity of the system.

### **5th Street / Jantz Road**

As shown in [Table 5](#), at full buildout high volumes of traffic, primarily at the southbound left-turn and westbound right-turn movements, would degrade LOS at 5th Street / Jantz Road to LOS F during the weekday AM and PM peak hour. Improvements at this intersection would be necessary to accommodate traffic volumes, although the timing and type of improvements are dependent on the type and location of development throughout the site. Based on the development assumptions the following improvements could be considered:

- Installation of a roundabout – This assumes two entry and exit lanes at the southbound approach to match improvements to the SR 124 / SR 12 EB Ramps discussed above. All other approaches are assumed to have one entry and exit lane. The resulting LOS during the weekday AM and PM peak hour is LOS A.
- Installation of a traffic signal – This assumes a southbound left-turn and through-right lane, westbound right-turn and through-left lane, and single lane approaches at the northbound and eastbound legs. With a signal installed at this location, the intersection LOS would improve to LOS A. Although a traffic signal results in an adequate level of service, the challenges associated with lane transitions between this intersection and the roundabout to the north, make this a more challenging and ROW intensive option.

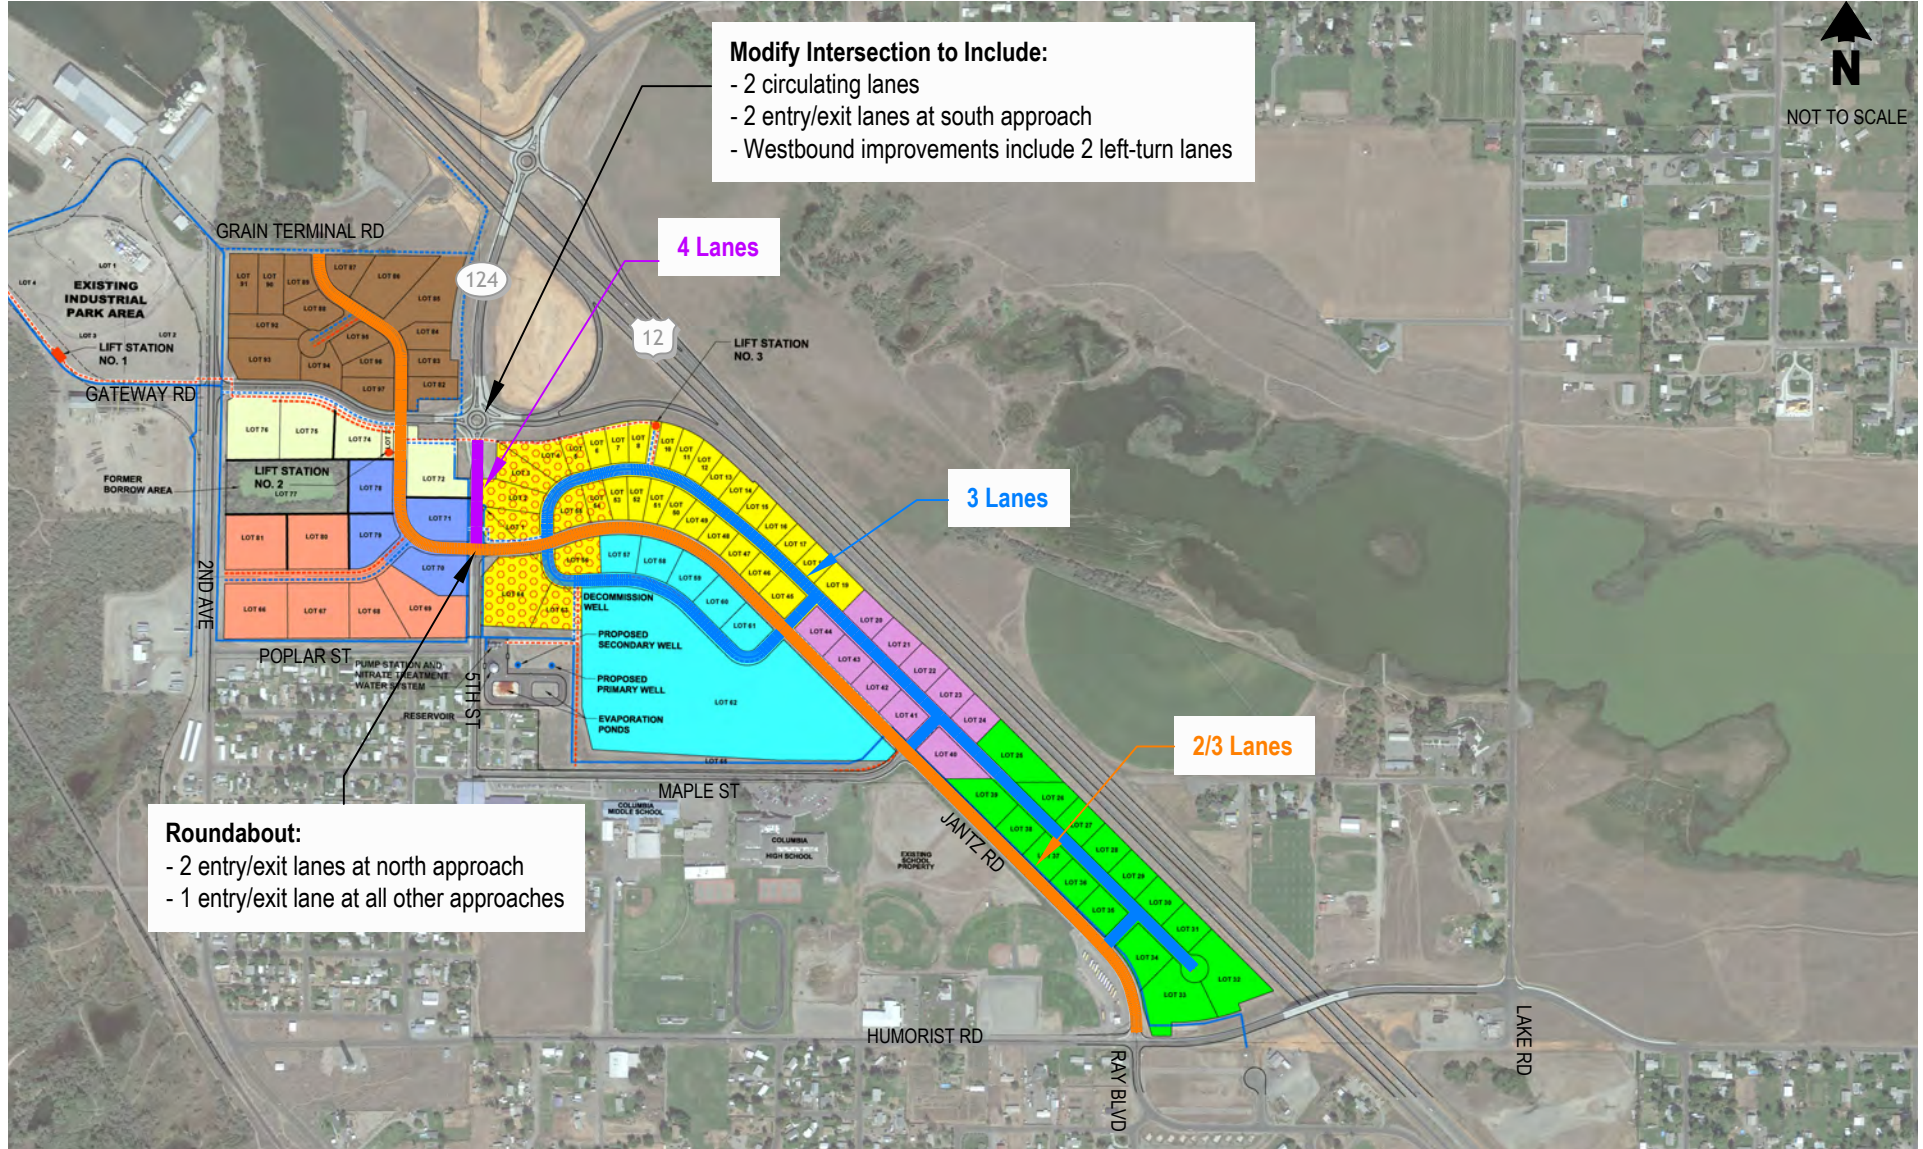

### **Local Roadway Network**

With the increased traffic demands associated with the proposed development the existing two-lane roadway network will need to be modified in some locations to accommodate the increase in future traffic volumes and provide access to the development parcels. Below is a list of improvements that have been identified to accommodate the development:

- Widen 5th Street to four lanes between Jantz Road and EB Ramps to accommodate intersection improvements at 5th Street / Jantz Road and SR 124 / SR 12 EB Ramps.

- Along Jantz Road east and west of 5th Street provide auxiliary turn lanes at internal roadways into the site. Also provide auxiliary turn lanes at the intersection of Maple Street / Jantz Road.
- All internal roadways within the development should provide three lanes to accommodate vehicle access to/from the development parcels.

## 2033 Master Improvements

Parcel tax ID: 300812510090, 300812510091,  
300812510092

Land use designation: Residential Single Family  
Current zoning: R-96 Suburban Residential  
Parcel area: 4,476,661 SF / 102.77 Ac

Water Service Provider: Great Basin Water Company

Sewer Service Provider: Port of Walla Walla

Irrigation Service Provider: South Columbia Basin  
Irrigation District

Drainage will be contained on-site in localized subsurface  
infiltration facilities.

NOTES: 1. SIDEWALK SHALL BE INSTALLED WITH THE HOME UNLESS  
OTHERWISE IDENTIFIED ON THE PLAN. fo=3,000psi  
2. SIDEWALKS PER WALLA WALLA COUNTY STANDARD

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Site Level of Service (LOS) Method: Delay & Degree of Saturation (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Roundabout LOS Method: Same as Signalised Intersections.

Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement.

Intersection and Approach LOS values are based on average delay for all movements (v/c not used).

Roundabout Capacity Model: SIDRA Standard.

Delay Model: SIDRA Standard (Geometric Delay is included).

Queue Model: HCM Queue Formula.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.
