Proposal
Subdivide 12.53 acres into 75 single-family residential lots

Public Hearing Date
9:30 a.m. May 16, 2024

Recommendation
Approval

PROPOSAL

The applicant proposes to subdivide a 12.53-acre parcel into 75 residential lots for single family dwellings. The property is zoned Moderate Density Residential (R-6), which allows between 3 to 6 dwelling units per gross acre of land.

PROPERTY CHARACTERISTICS

The property is located at 9819 Grove Rd SE and is located just south of Canal Road. The property is identified the Thurston County Assessor's Tax Parcel Number: 64303500100

Ariel and Parcel Boundary

The eastern portion of the site includes one single-family residence, two mobile homes, one barn, four sheds, and a well house.

Barn and sheds existing on the property looking west

Surrounding properties to the west and south are previous phases of the Willow Glenn subdivision of single-family homes. The properties to the immediate north were recently annexed into the City and have the same R-6 zoning. The properties to the east are unincorporated Thurston County; this land is within the Yelm Urban Growth Area and carries a 'future zoning' designation of High-Density Residential (R-16). Longmire Community Park is located to the north and Fort Stevens Elementary School is located to the south.

NOTICE OF APPLICATION AND PUBLIC HEARING

Notice of this application and preliminary SEPA determination of Nonsignificance was mailed to state and local agencies, property owners within 300 feet of the site on January 30th 2024, as well as published in the Nisqually Valley News on February 1st, 2024. No comments were received from nearby property owners or members of the public.

Existing Mobile Home, Notice of Hearing, Facing West

Notice of the date and time of the public hearing before the Hearing Examiner was provided as follows:

- Posted on the project site: April 29th, 2024
- Mailed to property owners within 300 feet of the site: April 29th, 2024
- Posted on the City of Yelm Website April 29th, 2024
- Published in the Nisqually Valley News: May 2nd, 2024.

STATE ENVIRONMENTAL POLICY ACT

The City of Yelm SEPA Responsible Official issued a Mitigated Determination of Non-Significance (MDNS) for the proposal on April 10, 2024. This determination is final and fulfills the City's responsibility for disclosure of potential significant environmental impacts.

Comments were received from the Washington State Department of Ecology (ECY), and Olympic Region Clean Air Agency. The

Taken Western Edge of Property, Facing East

Nisqually Indian Tribe responded with a letter of no concern, however the Nisqually Tribe must be notified if there are any Inadvertent Discoveries of Archaeological Resources/Human Burials. The full MDNS and the letters from ECY, ORCAA WSDOT and the Nisqually Indian Tribe are attached to this report.

The MDNS identified the following mitigation measures:

1. An asbestos survey be completed by a certified Asbestos Hazardous Emergency Response Act (AHERA) building inspector for the demolition of the existing structures. The existing structures include one single-family residence, two mobile homes, one barn, four sheds, and a well house. If asbestos is found during the survey, an ORCAA Asbestos Removal Notification must be completed and all asbestos containing material must be properly removed prior to the demolition. An ORCAA Demolition Notification must be submitted prior to the demolition of any structure that is 120 sq. ft or greater.
2. In addition to an asbestos abatement procedure, any hazardous or dangerous material or wastes are removed and appropriately managed prior to demolition.

CONCURRENCY / IMPACT FEES

The intent of the City's concurrency management program, as required by the Growth Management Act, is based on the maintenance of specified levels of service through capacity monitoring, allocation, and reservation procedures.

Concurrency describes the situation in which water, sewer and/or transportation facilities are available when the impacts of development occur. [Section 18.16.020 YMC]

Water:
The level of service for water infrastructure is the ability to provide potable water to the consumer for use and fire protection in accordance with adopted health and environmental regulations. [Section 18.16.030 YMC].

The State Subdivision Act, Chapter 58.17 RCW, requires that the City of Yelm make a written determination that appropriate provisions are made for potable water supplies as part of the preliminary land division process. The City of Yelm has the capacity to service the proposed subdivision.

The project is proposing to connect to the existing water main located at the end of Bourbon St SE.

The development is required to connect to and extend the main along all new proposed roadways within the subdivision, and to the northern property line along Grove Rd. The improvements required to serve the project will be specifically identified during civil plan review. This satisfies the requirement for concurrency with water infrastructure.

Any existing well(s) on the property must be decommissioned pursuant to Department of Ecology standards and any water rights associated with these wells shall be dedicated to the City of Yelm.

Sewer:
Concurrency with sewer infrastructure is achieved pursuant to Section 18.16.050 (C)(1) YMC when the project is within an area approved for sewer pursuant to the adopted sewer comprehensive plan for the city and, at the time of preliminary approval, the planned infrastructure identified in the six-year improvement program of the sewer system plan are sufficient to provide for the proposed land division and it is reasonably anticipated that the treatment plant has sufficient capacity to provide for the proposed land division.

The City's Sewer Comprehensive Plan identifies the property as being within the sewer service area and will need to connect to the City's S.T.E.P. sewer system. The project is proposing to connect to the sewer main on Bourbon St. SE.

The development is required to connect to and extend the main along all new proposed roadways within the subdivision, and to the northern property line along Grove Rd. SE. The improvements required to serve the project will be specifically identified during civil plan review. This satisfies the requirement for concurrency with sewer infrastructure.

Transportation and Access:

The project proposes site access from Grove Rd. SE, and Bourbon St. SE. with a future connection to Canal Road SE when the two properties to the north develop. These parcels are identified as Thurston County Tax Parcels 64300600102 and 64300600101. The project also includes a walking path that will connect to Greenleaf Loop SE.

Concurrency with transportation infrastructure is achieved pursuant to Section 18.16.050(B)(2) YMC. The applicant prepared a Traffic Impact Analysis (TIA) for this project due to its scale and high potential for impact to the Yelm transportation system, which is attached to this report. The TIA analyzed the effects that the proposed subdivision would have on nine nearby intersections, and all remain within the level of service standard. These intersections are identified as follows:

Table 5. PM Peak Hour Intersection Level of Service

				Base Year 2024		2025 Without Project		2025 With Project	
	Intersection	Control Type	LOS Standard	LOS (delay)	Worst V/C Ratio	LOS (delay)	Worst V/C Ratio	LOS (delay)	Worst V/C Ratio
1	Railway Road SE at Canal Rd SE	AWSC[2]	C	A (8.1)	0.24	A (8.1)	0.24	A (8.3)	0.26
2	Crystal Springs St/Edwards Street at Coates St SE	TWSC[1]	D	C (16.9)	0.45	C (17.3)	0.46	C (18.0)	0.48
3	1st Street NE/NW Rhoton Road at Railway Road	TWSC[1]	D	B (13.3)	0.21	B (14.0)	0.23	C (15.1)	0.29
4	Railway Road at Middle Street NW	TWSC[1]	C	A (9.5)	0.09	A (9.5)	0.09	A (9.7)	0.10
5	Stevens Street at 1st Street NE	AWSC[2]	D	C (19.8)	0.80	C (21.8)	0.83	D (25.6)	0.89
6	100th Way SE at Grove Road SE	TWSC[1]	C	A (9.7)	0.07	A (9.7)	0.07	B (10.4)	0.09

8	Yelm Avenue at Grove Road SE	TWSC[1]	D	C (19.1)	0.04	C (22.9)	0.11	C (24.6)	0.14
9	Site Driveway at Grove Road SE	TWSC[1]	C	N/A	N/A	N/A	N/A	A (9.9)	0.04

1-Two-Way-Stop-Control
2-All-Way-Stop-Control

Frontage improvements are required as part of development. The developer has indicated that frontage improvements along Grove Rd SE will be installed to the City's adopted Neighborhood Collector standard and that internal streets will be constructed to adopted Local Access Residential standards.

Traffic Facility Charges are applied at the time of building permit issuance. These conditions satisfy the requirement for concurrency with transportation infrastructure.

Fire Protection:
Concurrency with fire protection is achieved pursuant to Section 18.16.090(C) by payment of impact fees at the time of construction. This fee is subject to change and is collected at the time of building permit issuance.

School:
Concurrency with school infrastructure is achieved pursuant to Section 18.16.090(B) YMC by payment of impact fees at the time of construction. This fee is subject to change and is collected at the time of building permit issuance.

CRITICAL AREAS

The Yelm Critical Areas Code, Chapter 18.21 YMC provides protection for wetlands, critical aquifer recharge areas, frequently flooded areas, geologically hazardous areas, and fish and wildlife habitat areas. No critical areas were identified on the site.

Aquifer Recharge*:*

All of Yelm is identified as a critical aquifer recharge area. Compliance with Federal, State, and County water source protection regulations and with the City's adopted stormwater regulations are required to protect the aquifer [Section 18.21.070 (C) YMC].

The stormwater system proposed is Oldcastle PerkFilter, which was designed using the guidelines and requirements established in the 2019 DOE Stormwater Management Manual for Western Washington (2019 SWMMWW) as required by the City of Yelm Municipal Code.

Wetlands*:*

No wetlands were identified on site.

Fish and Wildlife Habitat:

In April 2014, the U.S. Fish and Wildlife Service listed the Yelm subspecies of the Mazama Pocket Gopher as threatened under the Endangered Species Act. While the City of Yelm is not responsible for implementation or enforcement of the Endangered Species Act, it consults with the Service and provides notice to applicants that the pocket gopher is a federally protected species and a permit from the U.S. Fish and Wildlife Service may be required.

A Mazama Pocket Gopher and Regulated Prairie Absence Report was submitted with the preliminary subdivision application. This report found no evidence of MPG on the subject property.

ZONING & DESIGN STANDARDS

Zoning:

The R-6 zone is intended to provide space for single-family residences in a moderate-density configuration. The allowed density is between three and six dwelling units per acre [18.32.040(A) YMC] and there is no minimum lot size [18.32.040(B) YMC]. The proposed density of this subdivision is 6 units per acre, with lot sizes ranging from 0.1 acres to 0.25 acres.

Setbacks*:*

The setback requirements for the R-6 Zone are as follows:

- Front yard: 15 feet from a local access street, 25 feet from a collector street, and 35 feet from an arterial street
- Side yard: 5 feet
- Flanking yard: 15 feet
- Rear yard setback: 25 feet

The preliminary site plans satisfy setback requirements.

Street Lighting*:*

Adequate street lighting is necessary to provide safety to pedestrians, vehicles, and homeowners. The applicant shall submit a lighting plan during Civil Plan Review that meets all requirements of 18.59.050 YMC.

Parking*:*

Residential uses require two spaces per dwelling unit. This is typically achieved with a standard driveway approach. When applying for a building permit for each lot, the applicant shall show adequate parking for each single-family residence.

Water*:*

Chapter 13.04 YMC and Chapter 4 of the Development Guidelines establish requirements for connection to the City's water system. Water connections are based on Equivalent Residential Units (875 cubic feet of water consumption per month). Water connections are subject to final approval during Civil Plan Review.

The City implements a cross-connection and backflow control program pursuant to Title 43 RCW and Chapter 248-54 WAC. A backflow prevention device is required to protect Yelm's water system from cross-connections from any irrigation systems [13.04.220(D) YMC].

Fire hydrant locks are required to be installed and paid for by the applicant.

Sewer*:*

Chapter 13.08 YMC and Chapter 5 of the Development Guidelines establish requirements for connection to the City's sewer system. The property is located in the City of Yelm's STEP sewer system service area, and connection to the City sewer service is required. Sewer connections are based on Equivalent Residential Units (875 cubic feet of water consumption per month).

Reclaimed water:

Chapter 6 of the Development Guidelines establishes requirements for connection to the City's reclaimed water system. When a public reclaimed water utility is available, it must be used for irrigation of open space areas. Where public reclaimed water is not available within the City limits, connection is required if the subject property is within 200 feet of a public reclaimed water utility, as measured from the lot line closest to the existing reclaimed water utility.

The project will be required to connect to the reclaimed water utility for irrigation purposes if the reclaimed water utility becomes available before an application is submitted for Civil Plan Review.

Building Design:

Chapter 18.61 YMC establishes requirements for building design. All proposed buildings must adhere to the allowed materials and colors listed in 18.61.050 YMC. Building design is subject to review after the applicant has submitted a building permit application for each proposed residence.

Mailboxes:

New residential developments shall coordinate with the U.S. Postal Service for the location of mailboxes. Mailboxes shall be cluster box units (CBU) spaced throughout the development on local access residential and private streets only [18.59.080 YMC].

Transit: New residential developments shall coordinate with Intercity Transit to incorporate transit stops. Intercity Transit shall determine the type and location of new or upgraded stops [18.59.070 YMC].

Landscaping: Chapter 18.55 YMC establishes minimum requirements and standards for landscaping for new development projects. For residential subdivisions, a perimeter fence is a suitable alternative to perimeter landscaping. Submitted plans indicate a solid board fence along the perimeter of the development. Streetscape landscaping is required for the proposed internal access roads. Final landscaping plans that indicate conformance with 18.55.020(C) YMC Streetscapes shall be submitted during Civil Plan Review. Stormwater facility landscaping is required [18.55.020(E.2) YMC]. The site plan indicates a single underground stormwater facility on the west side of the property and under the area designated as open space. A detailed irrigation plan is required during Civil Plan Review.

Open Space:

Single-family residential subdivisions are required to include dedicated open space of at least 5% of the total gross area of the development. Areas dedicated to environmental protection or interpretation are suitable for the open space requirement, along with off-road trails [18.56.020(A) YMC]. The submitted site plan depicts a single open space tract with an open lawn play area, a perimeter walking path, a barbecue grill, and picnic tables. The submitted site plans meet the minimum requirements for open space area in terms of total land allocated and suitability of the proposed uses.

Subdivision Name and Addressing:

Prior to final subdivision approval, the applicant shall make a plat name reservation with the Thurston County Auditor. During Civil Plan Review, the applicant shall provide an addressing map for approval by the City of Yelm Building Official.

STAFF RECOMMENDATION

Section 18.14.050 YMC requires written findings prior to a decision on a preliminary subdivision. The applicant has established that the proposed subdivision adequately provides for the public health, safety, and general welfare; and for such open spaces, drainage ways, streets, sanitary wastes, parks and recreation, schools, and sidewalks; and that the public use and interest will be served by the subdivision of the property.

The Public Services Department recommends that the preliminary subdivision be approved. If the Hearing Examiner agrees that requirements have been met, the Department would recommend the following conditions be included with a preliminary approval:

1. The conditions of the Mitigated Determination of Nonsignificance associated with this project are hereby referenced and are considered conditions of this approval.
2. A lighting plan shall be submitted during Civil Plan Review.
3. Any proposed irrigation system shall incorporate a backflow prevention device and conform with the cross-connection and backflow control program as defined in 13.04.220(D) YMC. The final landscape plan shall be submitted during Civil Plan Review and include a detailed irrigation plan.
4. Plans submitted during Civil Plan Review shall include an addressing map for approval by the building official.
5. Plans submitted during Civil Plan Review shall include the proposed location and details for mailbox placement and these plans must conform to 18.59.080 YMC.
6. The applicant shall provide a performance assurance device in order to provide for maintenance of the required landscaping for this subdivision, until the homeowners' association becomes responsible for the landscaping maintenance. The performance assurance device shall be 150 percent of the anticipated cost to maintain the landscaping for three years.

7. Stormwater facilities shall be located in separate recorded tracts owned and maintained by the homeowners' association. The stormwater system shall be held in common by the homeowners' association and the homeowner's agreement shall include provision for the assessment of fees against individual lots for the maintenance and repair of the stormwater facilities.
8. SE Thurston Fire Authority has requested the proposed fire hydrant east of Bourbon Street be moved to the corner of Bourbon St. SE and "Road A". The exact location and provision of fire hydrants is finalized during Civil Plan Review. The applicant shall submit a fire hydrant plan that is subject to review and final approval during Civil Plan Review.
9. The applicant shall secure all necessary demolition permits prior to demolition of the current structures on the property.
10. If the reclaimed water utility becomes available before an application is submitted for Civil Plan Review, connection to the City's reclaimed water utility will be required. The reclaimed water line would need to be extended into the proposed subdivision along each of the proposed internal roads, and all open space tracts that will feature irrigation systems would need to utilize reclaimed water.
11. Chapter 2 "Transportation Details require travel lanes to be 11 feet wide. A traffic circle, Island or another traffic calming device on Bourbon St. SE will be required to narrow the travel lanes at the location of the current cul-de-sac. The traffic calming device will need to be approved by the Civil Review Engineer during Civil Plan Review.

Re: Willow Glenn IV Preliminary Subdivision
Response to City Comments

Dear Andrew:

Thank you for providing the review comments letter dated February 13, 2024 and the marked up plan set for the Willow Glenn IV Preliminary Subdivision Submittal. The first review comments are repeated below with responses in *italics*. As discussed, we have updated the layout of the site to accommodate a street connection to Bourbon Street rather than to Greenleaf Loop. Plan sheets mentioned are part of the updated plan set submitted with this letter.

Review Letter Comments:

1. After further review and discussion with the SE Thurston Fire Authority, we will need the road and sidewalk to connect to Greenleaf Loop, in addition to the stub out to the property to the north.
   Response: Subsequent to this comment being issued it has been resolved to provide a street connection to Bourbon Street rather than Greenleaf Loop. The road and sidewalk have been connected to Bourbon Street. The roadway connection to Greenleaf Loop has been removed. A pedestrian connection remains to Greenleaf Loop.

2. Fire hydrants will need to be relocated, as shown in the attached document "Fire Hydrant Relocation" The locations are approximate.
   Response: The fire hydrants have been relocated per the "Fire Hydrant Relocation" sketch.

3. Please see the marked-up plan.
   Response: Comments from the marked-up plan set are found below.

4. Please provide:
   a. fire flow
      Response: This will be provided with Civil Plan Review.
   b. lighting plan
      Response: This will be provided with Civil Plan Review.
   c. monument plans and the detail,
      Response: A Preliminary Monument Plan has been created. It shows the City's detail for a cast-in-place monument. Please see sheet SP-02 in the enclosed plan set.

d. Signature Approval Block (leave room the electronic signature block (4" wide x 2" high) – All Sheets) by the time of submitting for the Civil Plan Review
Response: this space will be reserved on all sheets submitted for Civil Plan Review.

e. Please provide more information for existing/abandon well and septic.
Response: There is an existing well located on the site, the well house is shown on the survey by MTN2COAST included in the plan set. The well is to be abandoned by a licensed will driller per WAC 173-160-381.
Septic records from Thurston County for the parcel are enclosed with this letter. The records show a septic tank for the house and a septic tank for three mobile homes. The septic tank and drain field are located behind (south) of the trailers per the records. The septic tanks will be pumped and filled or removed and disposed of offsite. The drain fields will be removed where encountered and the material that is excavated will be disposed of. In correspondence with Thurston County, the County states they have jurisdiction over the abandonment of the existing septic system. A Master Application (enclosed) and Onsite Sewage System Abandonment Supplemental Application (enclosed) are to be submitted to Thurston County along with verification that the septic tanks have been pumped from the septic pumping contractor.

5. The Reclaimed Water is not shown on the plans
Response: There is no reclaimed water main near the site. Irrigation for open space and right of way landscape will be provided from the proposed potable water main running through the site.

Marked-up Plan Comments:

The sheets referenced are from a file received from you titled Willow Glenn IV Preliminary Subdivsion_MarkedUP(Drew).pdf. Updates are reflected in the plan set enclosed with this letter.

CV-01: The site map has been zoomed out to show more of the surrounding area. The north arrow has been moved.

EC-01: The scale bar will remain as-is per our correspondence. It does not mention a scale in inches in the event the plans are reproduced at something other than full scale.

SP-01: Bulbouts have been added at intersections where indicated per Dwg 2-8B On-Street Parking Detail. Street lighting plan in conformance with 2.40, Illumination, will be provide for Civil Plan Review.

SD-01: The Stormwater Infiltration Facility has been shifted to provide a 12' setback from the adjacent property line, which exceeds the requested 10' setback.

UT-01: Keyed note 3 has been expanded to include a blow-off valve should the property to the north not be developed before this project is. All sewer Carson boxes have been moved so that their center is 4' from the back of curb. Per correspondence with the City, the water main will not be connected to the existing water main in Greenleaf Loop. A connection to the existing water main in Bourbon Street is now shown. Setback distances have been confirmed. Additional valves have been added to the water main and sewer force main at the requested junctions. Fire hydrants have been relocated per the "Fire Hydrant Relocation" sketch. Reclaimed water has not been added, there is no reclaimed water main near the site.

If you have any questions regarding the above, please contact me directly at (360) 352-1465.

Respectfully,
SCJ Alliance

Dan Phillips
Project Engineer

MONUMENT NOTES

1. FOUND 3" BRASS MONUMENT WITH PUNCH IN METAL CASE MARKED "YELM-2".
2. FOUND 3" BRASS SURFACE MONUMENT WITH PUNCH MARKED "SKILLINGS CONNOLLY CONSULTING ENGINEERS LS 27192".
3. FOUND 5/8" REBAR WITH RED PLASTIC CAP MARKED "FOX LS27192".
4. FOUND 3" BRASS SURFACE MONUMENT WITHOUT PUNCH MARKED "SKILLINGS CONNOLLY CONSULTING ENGINEERING LS 29275".
5. FOUND 5/8" REBAR WITH SMASHED YELLOW PLASTIC CAP, MARKING ON CAP NOT LEGIBLE. MONUMENT TIED FOR THURSTON COUNTY MONUMENT 7656, SET BASED ON MCKENNA'S IRRIGATED TRACTS.
6. FOUND 5/8" REBAR WITH ORANGE PLASTIC CAP MARKED "JCG LS29275".

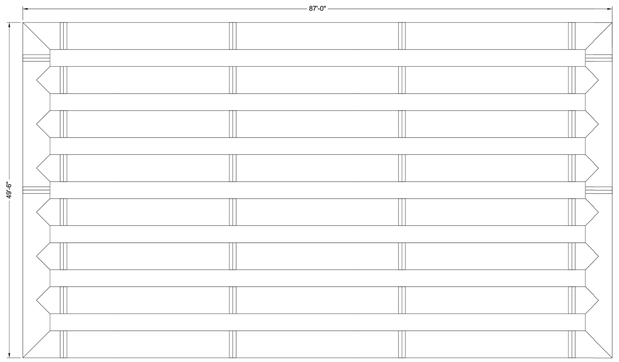
PROJECT SUMMARY

CALCULATION DETAILS
- LOADING = HS20/HS25
- APPROX. LINEAR FOOTAGE = 731 LF

STORAGE SUMMARY
- STORAGE VOLUME REQUIRED = N/A
- PIPE STORAGE VOLUME = 9,186 CF
- BACKFILL STORAGE VOLUME = 7,559 CF
- TOTAL STORAGE PROVIDED = 16,780 CF

PIPE DETAILS
- DIAMETER = 48"
- CORRUGATION = 2 2/3x1/2
- GAGE = 16
- COATING = ALT2
- WALL TYPE = PERFORATED
- BARREL SPACING = 30"

BACKFILL DETAILS
- WIDTH AT ENDS = 24"
- ABOVE PIPE = 12"
- WIDTH AT SIDES = 12"
- BELOW PIPE = 12"



NOTES

- ALL RISER AND STUB DIMENSIONS ARE TO CENTERLINE. ALL ELEVATIONS, DIMENSIONS, AND LOCATIONS OF RISERS AND INLETS, SHALL BE VERIFIED BY THE ENGINEER OF RECORD PRIOR TO RELEASING FOR FABRICATION.
- ALL FITTINGS AND REINFORCEMENT COMPLY WITH ASTM A998.
- ALL RISERS AND STUBS ARE $2\frac{2}{3}$" x $\frac{1}{2}$" CORRUGATION AND 16 GAGE UNLESS OTHERWISE NOTED.
- RISERS TO BE FIELD TRIMMED TO GRADE.
- QUANTITY OF PIPE SHOWN DOES NOT PROVIDE EXTRA PIPE FOR CONNECTING THE SYSTEM TO EXISTING PIPE OR DRAINAGE STRUCTURES. OUR SYSTEM AS DETAILED PROVIDES NOMINAL INLET AND/OR OUTLET PIPE STUB FOR CONNECTION TO EXISTING DRAINAGE FACILITIES. IF ADDITIONAL PIPE IS NEEDED IT IS THE RESPONSIBILITY OF THE CONTRACTOR.
- BAND TYPE TO BE DETERMINED UPON FINAL DESIGN.
- THE PROJECT SUMMARY IS REFLECTIVE OF THE DYODS DESIGN. QUANTITIES ARE APPROX. AND SHOULD BE VERIFIED UPON FINAL DESIGN AND APPROVAL. FOR EXAMPLE, TOTAL EXCAVATION DOES NOT CONSIDER ALL VARIABLES SUCH AS SHORING AND ONLY ACCOUNTS FOR MATERIAL WITHIN THE ESTIMATED EXCAVATION FOOTPRINT.
- THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

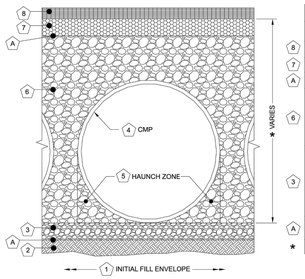
CONTECH CMP DETENTION SYSTEMS
CONTECH DYODS DRAWING

DYO39743 Willow Glenn IV - 12 inches per hour
Infiltration System
Yelm, WA
DETENTION SYSTEM

PROJECT No.:	SEQ. No.:	DATE:
27148	39743	10/20/2023
DESIGNED: DYO	DRAWN: DYO	
CHECKED: DYO	APPROVED: DYO	
SHEET NO.:	1	



Infiltration Systems - CMP Infiltration & CMP Perforated Drainage Pipe			
Material Location	Description	Material Designation	Designation
8 Rigid or Flexible Pavement (if applicable)			
7 Road Base (if applicable)			
A Geotextile Layer	Non-Woven Geotextile	CONTECH C-40 or C-45	Engineer Decision for consideration to prevent soil migration into varying soil types. Wrap the trench only.
6 Backfill	Infiltration pipe systems have a pipe perforation sized of 3/8" diameter. An open graded, free draining stone, with a particle size of ¼" - 2 ½" diameter is recommended.	AASHTO M 145 - A-1 or AASHTO M 43 - 3, 4	Material shall be worked into the pipe haunches by means of shovel-sliding, rodding, air-tamper, vibratory rod, or other effective methods. Compaction of all placed fill material is necessary and shall be considered adequate when no further yielding of the material is observed under the compactor, or under foot, and the Project Engineer or his representative is satisfied with the level of compaction"
3 Bedding Stone	Well graded granular bedding material w/maximum particle size of 3"	AASHTO M43 - 3,357,4,467, 5, 56, 57	For soil aggregates larger than 3/8" a dedicated bedding layer is not required for CMP. Pipe may be placed on the trench bottom comprised of native suitable well graded & granular material. For Arch pipes it is recommended to be shaped to a relatively flat bottom or fine-grade the foundation to a slight v-shape. Soil aggregates less than 3/8" and unsuitable material should be over-excavated and re-placed with a 4"-6" layer of well graded & granular stone per the material designation.
A Geotextile Layer	None	None	Contech does not recommend geotextiles be placed under the invert of Infiltration systems due to the propensity for geotextiles to clog over time.
★	Note: The listed AASHTO designations are for gradation only. The stone must also be angular and clean.		

1. MINIMUM WIDTH DEPENDS ON SITE CONDITIONS AND ENGINEERING JUDGEMENT.

FOUNDATION/BEDDING PREPARATION

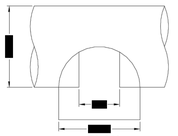
2. PRIOR TO PLACING THE BEDDING, THE FOUNDATION MUST BE CONSTRUCTED TO A UNIFORM AND STABLE GRADE. IN THE EVENT THAT UNSUITABLE FOUNDATION MATERIALS ARE ENCOUNTERED DURING EXCAVATION, THEY SHALL BE REMOVED AND BROUGHT BACK TO THE GRADE WITH A FILL MATERIAL AS APPROVED BY THE ENGINEER.

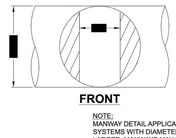
5. HAUNCH ZONE MATERIAL SHALL BE PLACED AND UNIFORMLY COMPACTED WITHOUT SOFT SPOTS.

BACKFILL
MATERIAL SHALL BE PLACED IN 8"-10" MAXIMUM LIFTS. INADEQUATE COMPACTION CAN LEAD TO EXCESSIVE DEFLECTIONS WITHIN THE SYSTEM AND SETTLEMENT OF THE SOILS OVER THE SYSTEM. BACKFILL SHALL BE PLACED SUCH THAT THERE IS NO MORE THAN A TWO-LIFT DIFFERENTIAL BETWEEN THE SIDES OF ANY PIPE IN THE SYSTEM AT ALL TIMES DURING THE BACKFILL PROCESS. BACKFILL SHALL BE ADVANCED ALONG THE LENGTH OF THE SYSTEM AT THE SAME RATE TO AVOID DIFFERENTIAL LOADING ON ANY PIPES IN THE SYSTEM.

EQUIPMENT USED TO PLACE AND COMPACT THE BACKFILL SHALL BE OF A SIZE AND TYPE SO AS NOT TO DISTORT, DAMAGE, OR DISPLACE THE PIPE. ATTENTION MUST BE GIVEN TO PROVIDING ADEQUATE MINIMUM COVER FOR SUCH EQUIPMENT. MAINTAIN BALANCED LOADING ON ALL PIPES IN THE SYSTEM DURING ALL SUCH OPERATIONS.

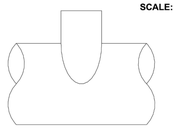
OTHER ALTERNATE BACKFILL MATERIAL MAY BE ALLOWED DEPENDING ON SITE SPECIFIC CONDITIONS. REFER TO TYPICAL BACKFILL DETAIL FOR MATERIAL REQUIRED.

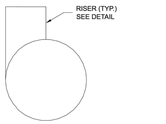




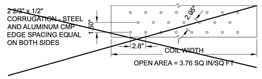
TYPICAL MANWAY DETAIL
SCALE: N.T.S.

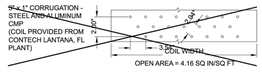
NOTE:
MANWAY DETAIL APPLICABLE FOR CMP SYSTEMS WITH DIAMETERS 48" AND LARGER. MANWAYS MAY BE REQUIRED ON SMALLER SYSTEMS DEPENDING ON ACTUAL SITE SPECIFIC CONDITIONS.

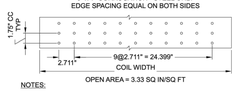




NOTE:
LADDERS ARE OPTIONAL AND ARE NOT REQUIRED FOR ALL SYSTEMS.







NOTES:
1. PERFORATIONS MEET AASHTO AND ASTM SPECIFICATIONS.
2. PERFORATION OPEN AREA PER SQUARE FOOT OF PIPE IS BASED ON THE NOMINAL DIAMETER AND LENGTH OF PIPE.
3. ALL DIMENSIONS ARE SUBJECT TO MANUFACTURING TOLERANCES.
4. ALL HOLES ≈3/8".

TYPICAL PERFORATION DETAIL

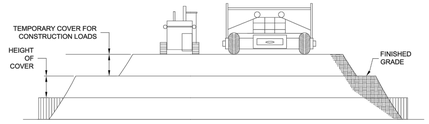
SHEET NO.:	1	



CONSTRUCTION LOADS

FOR TEMPORARY CONSTRUCTION VEHICLE LOADS, AN EXTRA AMOUNT OF COMPACTED COVER MAY BE REQUIRED OVER THE TOP OF THE PIPE. THE HEIGHT-OF-COVER SHALL MEET THE MINIMUM REQUIREMENTS SHOWN IN THE TABLE BELOW. THE USE OF HEAVY CONSTRUCTION EQUIPMENT NECESSITATES GREATER PROTECTION FOR THE PIPE THAN FINISHED GRADE COVER MINIMUMS FOR NORMAL HIGHWAY TRAFFIC.

PIPE SPAN, INCHES	AXLE LOADS (kips)			
	18-50	50-75	75-110	110-150
	MINIMUM COVER (FT)			
12-42	2.0	2.5	3.0	3.0
48-72	3.0	3.0	3.5	4.0
78-120	3.0	3.5	4.0	4.0
126-144	3.5	4.0	4.5	4.5

*MINIMUM COVER MAY VARY, DEPENDING ON LOCAL CONDITIONS. THE CONTRACTOR MUST PROVIDE THE ADDITIONAL COVER REQUIRED TO AVOID DAMAGE TO THE PIPE. MINIMUM COVER IS MEASURED FROM THE TOP OF THE PIPE TO THE TOP OF THE MAINTENANCE/CONSTRUCTION ROADWAY.

CONSTRUCTION LOADING DIAGRAM
SCALE: N.T.S.

SPECIFICATION FOR DESIGNED DETENTION SYSTEM:

SCOPE
THIS SPECIFICATION COVERS THE MANUFACTURE AND INSTALLATION OF THE DESIGNED DETENTION SYSTEM DETAILED IN THE PROJECT PLANS.

MATERIAL
THE MATERIAL SHALL CONFORM TO THE APPLICABLE REQUIREMENTS LISTED BELOW:

ALUMINIZED TYPE 2 STEEL COILS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-274 OR ASTM A-92.

THE GALVANIZED STEEL COILS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-218 OR ASTM A-929.

THE POLYMER COATED STEEL COILS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-246 OR ASTM A-742.

THE ALUMINUM COILS SHALL CONFORM TO THE APPLICABLE OF AASHTO M-197 OR ASTM B-744.

CONSTRUCTION LOADS
CONSTRUCTION LOADS MAY BE HIGHER THAN FINAL LOADS. FOLLOW THE MANUFACTURER'S OR NCSPA GUIDELINES.

NOTE:
THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

PIPE
THE PIPE SHALL BE MANUFACTURED IN ACCORDANCE TO THE APPLICABLE REQUIREMENTS LISTED BELOW:

ALUMINIZED TYPE 2: AASHTO M-36 OR ASTM A-760

GALVANIZED: AASHTO M-36 OR ASTM A-760

POLYMER COATED: AASHTO M-245 OR ASTM A-762

ALUMINUM: AASHTO M-196 OR ASTM B-745

APPLICABLE HANDLING AND ASSEMBLY
SHALL BE IN ACCORDANCE WITH NCSPS (NATIONAL CORRUGATED STEEL PIPE ASSOCIATION) FOR ALUMINIZED TYPE 2, GALVANIZED OR POLYMER COATED STEEL. SHALL BE IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS FOR ALUMINUM PIPE.

REQUIREMENTS
INSTALLATION
SHALL BE IN ACCORDANCE WITH AASHTO STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES, SECTION 26, DIVISION II DIVISION II OR ASTM A-798 (FOR ALUMINIZED TYPE 2, GALVANIZED OR POLYMER COATED STEEL) OR ASTM B-788 (FOR ALUMINUM PIPE) AND IN CONFORMANCE WITH THE PROJECT PLANS AND SPECIFICATIONS. IF THERE ARE ANY INCONSISTENCIES OR CONFLICTS THE CONTRACTOR SHOULD DISCUSS AND RESOLVE WITH THE SITE ENGINEER.

IT IS ALWAYS THE RESPONSIBILITY OF THE CONTRACTOR TO FOLLOW OSHA GUIDELINES FOR SAFE PRACTICES.

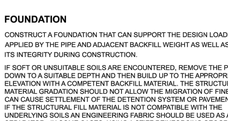
CMP DETENTION INSTALLATION GUIDE

PROPER INSTALLATION OF A FLEXIBLE UNDERGROUND DETENTION SYSTEM WILL ENSURE LONG-TERM PERFORMANCE. THE CONFIGURATION OF THESE SYSTEMS OFTEN REQUIRES SPECIAL CONSTRUCTION PRACTICES THAT DIFFER FROM CONVENTIONAL FLEXIBLE PIPE CONSTRUCTION. CONTECH ENGINEERED SOLUTIONS STRONGLY SUGGESTS SCHEDULING A PRE-CONSTRUCTION MEETING WITH YOUR LOCAL SALES ENGINEER TO DETERMINE IF ADDITIONAL MEASURES, NOT COVERED IN THIS GUIDE, ARE APPROPRIATE FOR YOUR SITE.

FOUNDATION

CONSTRUCT A FOUNDATION THAT CAN SUPPORT THE DESIGN LOADING APPLIED BY THE PIPE AND ADJACENT BACKFILL WEIGHT AS WELL AS MAINTAIN ITS INTEGRITY DURING CONSTRUCTION.

IF SOFT OR UNSUITABLE SOILS ARE ENCOUNTERED, REMOVE THE POOR SOILS DOWN TO A SUITABLE DEPTH AND THEN BUILD UP TO THE APPROPRIATE ELEVATION WITH A COMPETENT BACKFILL MATERIAL. THE STRUCTURAL FILL MATERIAL GRADATION SHOULD NOT ALLOW THE MIGRATION OF FINES, WHICH CAN CAUSE SETTLEMENT OF THE DETENTION SYSTEM OR PAVEMENT ABOVE. IF THE STRUCTURAL FILL MATERIAL IS NOT COMPATIBLE WITH THE UNDERLYING SOILS AN ENGINEERING FABRIC SHOULD BE USED AS A SEPARATOR. IN SOME CASES, USING A STIFF REINFORCING GEOGRID REDUCES OVER EXCAVATION AND REPLACEMENT FILL QUANTITIES.

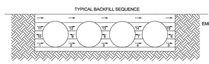


GRADE THE FOUNDATION SUBGRADE TO A UNIFORM OR SLIGHTLY SLOPING GRADE. IF THE SUBGRADE IS CLAY OR RELATIVELY NON-POROUS AND THE CONSTRUCTION SEQUENCE WILL LAST FOR AN EXTENDED PERIOD OF TIME, IT IS BEST TO SLOPE THE GRADE TO ONE END OF THE SYSTEM. THIS WILL ALLOW ACCESS WATER TO DRAIN QUICKLY, PREVENTING SATURATION OF THE SUBGRADE.

GEOMEMBRANE BARRIER

A SITE'S RESISTIVITY MAY CHANGE OVER TIME WHEN VARIOUS TYPES OF SALTING AGENTS ARE USED, SUCH AS ROAD SALTS FOR DEICING AGENTS. IF SALTING AGENTS ARE USED ON OR NEAR THE PROJECT SITE, A GEOMEMBRANE BARRIER IS RECOMMENDED WITH THE SYSTEM. THE GEOMEMBRANE LINER IS INTENDED TO HELP PROTECT THE SYSTEM FROM THE POTENTIAL ADVERSE EFFECTS THAT MAY RESULT FROM THE USE OF SUCH AGENTS INCLUDING PREMATURE CORROSION AND REDUCED ACTUAL SERVICE LIFE.

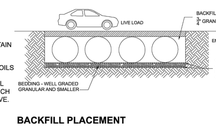
THE PROJECT'S ENGINEER OF RECORD IS TO EVALUATE WHETHER SALTING AGENTS WILL BE USED ON OR NEAR THE PROJECT SITE, AND USE HIS/HER BEST JUDGEMENT TO DETERMINE IF ANY ADDITIONAL PROTECTIVE MEASURES ARE REQUIRED. BELOW IS A TYPICAL DETAIL SHOWING THE PLACEMENT OF A GEOMEMBRANE BARRIER FOR PROJECTS WHERE SALTING AGENTS ARE USED ON OR NEAR THE PROJECT SITE.



IN-SITU TRENCH WALL

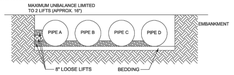
IF EXCAVATION IS REQUIRED, THE TRENCH WALL NEEDS TO BE CAPABLE OF SUPPORTING THE LOAD THAT THE PIPE SHEDS AS THE SYSTEM IS LOADED. IF SOILS ARE NOT CAPABLE OF SUPPORTING THESE LOADS, THE PIPE CAN DEFLECT. PERFORM A SIMPLE SOIL PRESSURE CHECK USING THE APPLIED LOADS TO DETERMINE THE LIMITS OF EXCAVATION BEYOND THE SPRING LINE OF THE OUTER MOST PIPES.

IN MOST CASES THE REQUIREMENTS FOR A SAFE WORK ENVIRONMENT AND PROPER BACKFILL PLACEMENT AND COMPACTION TAKE CARE OF THIS CONCERN.



BACKFILL PLACEMENT

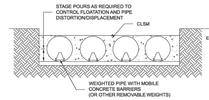
MATERIAL SHALL BE WORKED INTO THE PIPE HAUNCHES BY MEANS OF SHOVEL-SLICING, RODDING, AIR TAMPER, VIBRATORY ROD, OR OTHER EFFECTIVE METHODS.



IF AASHTO T99 PROCEDURES ARE DETERMINED INFEASIBLE BY THE GEOTECHNICAL ENGINEER OF RECORD, COMPACTION IS CONSIDERED ADEQUATE WHEN NO FURTHER YIELDING OF THE MATERIAL IS OBSERVED UNDER THE COMPACTOR, OR UNDER FOOT, AND THE GEOTECHNICAL ENGINEER OF RECORD (OR REPRESENTATIVE THEREOF) IS SATISFIED WITH THE LEVEL OF COMPACTION.

FOR LARGE SYSTEMS, CONVEYOR SYSTEMS, BACKHOES WITH LONG REACHES OR DRAGLINES WITH STONE BUCKETS MAY BE USED TO PLACE BACKFILL. ONCE MINIMUM COVER FOR CONSTRUCTION LOADING ACROSS THE ENTIRE WIDTH OF THE SYSTEM IS REACHED, ADVANCE THE EQUIPMENT TO THE END OF THE RECENTLY PLACED FILL, AND BEGIN THE SEQUENCE AGAIN UNTIL THE SYSTEM IS COMPLETELY BACKFILLED. THIS TYPE OF CONSTRUCTION SEQUENCE PROVIDES ROOM FOR STOCKPILED BACKFILL DIRECTLY BEHIND THE BACKHOE, AS WELL AS THE MOVEMENT OF CONSTRUCTION TRAFFIC. MATERIAL STOCKPILES ON TOP OF THE BACKFILLED DETENTION SYSTEM SHOULD BE LIMITED TO 8- TO 10-FEET HIGH AND MUST PROVIDE BALANCED LOADING ACROSS ALL BARRELS. TO DETERMINE THE PROPER COVER OVER THE PIPES TO ALLOW THE MOVEMENT OF CONSTRUCTION EQUIPMENT SEE TABLE 1, OR CONTACT YOUR LOCAL CONTECH SALES ENGINEER.

WHEN FLOWABLE FILL IS USED, YOU MUST PREVENT PIPE FLOATATION. TYPICALLY, SMALL LIFTS ARE PLACED BETWEEN THE PIPES AND THEN ALLOWED TO SET-UP PRIOR TO THE PLACEMENT OF THE NEXT LIFT. THE ALLOWABLE THICKNESS OF THE CLSM LIFT IS A FUNCTION OF A PROPER BALANCE BETWEEN THE UPLIFT FORCE OF THE CLSM, THE OPPOSING WEIGHT OF THE PIPE, AND THE EFFECT OF OTHER RESTRAINING MEASURES. THE PIPE CAN CARRY LIMITED FLUID PRESSURE WITHOUT PIPE DISTORTION OR DISPLACEMENT, WHICH ALSO AFFECTS THE CLSM LIFT THICKNESS. YOUR LOCAL CONTECH SALES ENGINEER CAN HELP DETERMINE THE PROPER LIFT THICKNESS.

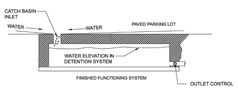


CONSTRUCTION LOADING

TYPICALLY, THE MINIMUM COVER SPECIFIED FOR A PROJECT ASSUMES H-20 LIVE LOAD. BECAUSE CONSTRUCTION LOADS OFTEN EXCEED DESIGN LIVE LOADS, INCREASED TEMPORARY MINIMUM COVER REQUIREMENTS ARE NECESSARY. SINCE CONSTRUCTION EQUIPMENT VARIES FROM JOB TO JOB, IT IS BEST TO ADDRESS EQUIPMENT SPECIFIC MINIMUM COVER REQUIREMENTS WITH YOUR LOCAL CONTECH SALES ENGINEER DURING YOUR PRE-CONSTRUCTION MEETING.

ADDITIONAL CONSIDERATIONS

BECAUSE MOST SYSTEMS ARE CONSTRUCTED BELOW-GRADE, RAINFALL CAN RAPIDLY FILL THE EXCAVATION; POTENTIALLY CAUSING FLOATATION AND MOVEMENT OF THE PREVIOUSLY PLACED PIPES. TO HELP MITIGATE POTENTIAL PROBLEMS, IT IS BEST TO START THE INSTALLATION AT THE DOWNSTREAM END WITH THE OUTLET ALREADY CONSTRUCTED TO ALLOW A ROUTE FOR THE WATER TO ESCAPE. TEMPORARY DIVERSION MEASURES MAY BE REQUIRED FOR HIGH FLOWS DUE TO THE RESTRICTED NATURE OF THE OUTLET PIPE.



CMP DETENTION SYSTEM INSPECTION AND MAINTENANCE

UNDERGROUND STORMWATER DETENTION AND INFILTRATION SYSTEMS MUST BE INSPECTED AND MAINTAINED AT REGULAR INTERVALS FOR PURPOSES OF PERFORMANCE AND LONGEVITY.

INSPECTION

INSPECTION IS THE KEY TO EFFECTIVE MAINTENANCE OF CMP DETENTION SYSTEMS AND IS EASILY PERFORMED. CONTECH RECOMMENDS ONGOING, ANNUAL INSPECTIONS. SITES WITH HIGH TRASH LOAD OR SMALL OUTLET CONTROL ORIFICES MAY NEED MORE FREQUENT INSPECTIONS. THE RATE AT WHICH THE SYSTEM COLLECTS POLLUTANTS WILL DEPEND MORE ON SITE SPECIFIC ACTIVITIES RATHER THAN THE SIZE OR CONFIGURATION OF THE SYSTEM.

INSPECTIONS SHOULD BE PERFORMED MORE OFTEN IN EQUIPMENT WASHDOWN AREAS, IN CLIMATES WHERE SANDING AND/OR SALTING OPERATIONS TAKE PLACE, AND IN OTHER VARIOUS INSTANCES IN WHICH ONE WOULD EXPECT HIGHER ACCUMULATIONS OF SEDIMENT OR ABRASIVE/CORROSIVE CONDITIONS. A RECORD OF EACH INSPECTION IS TO BE MAINTAINED FOR THE LIFE OF THE SYSTEM

MAINTENANCE

CMP DETENTION SYSTEMS SHOULD BE CLEANED WHEN AN INSPECTION REVEALS ACCUMULATED SEDIMENT OR TRASH IS CLOGGING THE DISCHARGE ORIFICE.

ACCUMULATED SEDIMENT AND TRASH CAN TYPICALLY BE EVACUATED THROUGH THE MANHOLE OVER THE OUTLET ORIFICE. IF MAINTENANCE IS NOT PERFORMED AS RECOMMENDED, SEDIMENT AND TRASH MAY ACCUMULATE IN FRONT OF THE OUTLET ORIFICE. MANHOLE COVERS SHOULD BE SECURELY SEATED FOLLOWING CLEANING ACTIVITIES. CONTECH SUGGESTS THAT ALL SYSTEMS BE DESIGNED WITH AN ACCESS/INSPECTION MANHOLE SITUATED AT OR NEAR THE INLET AND THE OUTLET ORIFICE. SHOULD IT BE NECESSARY TO GET INSIDE THE SYSTEM TO PERFORM MAINTENANCE ACTIVITIES, ALL APPROPRIATE PRECAUTIONS REGARDING CONFINED SPACE ENTRY AND OSHA REGULATIONS SHOUL

ONSITE SEWAGE SYSTEM ABANDONMENT

STAFF USE ONLY	DATE STAMP
LABEL PLEASE NOTE: ALL APPLICATIONS AND SITE PLANS MUST BE COMPLETED IN BLACK OR BLUE INK ONLY	Reset Form **Intake by:**_____

This application cannot be submitted alone. In addition to this form, a complete package includes:

Applicant Use	SUBMITTAL CHECKLIST	Staff Use Only
☐	Master Application.	☐
☐	Pumper Report (available from pumping firm)	☐
☐	Applicable processing fees. *Refer to current fee schedules. Depending on the adopted fee structure, additional fees may occur if base hours/fees at intake are exhausted.*	☐

Reason for abandonment: _____

CERTIFICATION:

Name of pumping firm: _____ Date sewage tank was pumped: _____

Date sewage tank was filled: _____ Material used to fill sewage tank: _____

Date property was connected to sewer system: ☐ _____ ☐ (If applicable)

Septic tank pump and service report: ☐ attached ☐ submitted electronically

Name of sewer system: _____

County Use Only

Abandonment Approved by: _____ Date _____

Abandonment Disapproved by: _____ Date _____

Comments: _____

INSTRUCTIONS

1. Obtain and on-site sewage system abandonment application form from the Thurston County Permit Assistance Center.

2. Perform the abandonment:
    a. Have the sewage container pumped out by a Thurston County certified sewage system pumper. Ask the sewage system pumper to complete a pumper slip, certifying the pumping.
    b. Remove or destroy the lid.
    c. Fill the sewage container with earth, sand or gravel.
    d. It is recommended that the pipes leading into and out of the sewage container be disconnected.

3. Within five days of completion of the abandonment, complete the application, including the certification section. Attach the pumper slip to the on-site sewage system abandonment application and submit both to the Thurston County Permit Assistance Center, along with the application fee. If the abandonment is part of another Environmental Health review for the same property, and the reviews are being conducted concurrently, the abandonment fee may be waived. Please reference the pending review application when submitting the on-site sewage system abandonment application.

Environmental Health staff will review the documents and may visit the site to confirm the process. Upon approval, a copy of the approved application will be mailed to the applicant and county records will be changed to reflect the abandonment of the on-site sewage system.

ONSITE SEWAGE SYSTEM ABANDONMENT

How Do I Apply?

Obtain an On-Site Sewage System Abandonment application from the Thurston County Permit Assistance Center. Perform the abandonment (instructions below). Within five days of completion of the abandonment, complete the application, including the Certification section. Attach the pumper slip to the On-site Sewage System Abandonment application and submit both to the Thurston County Permit Assistance Center, with the applicable review fee. Complete application package requirements are outlined on the application.

Perform the Abandonment

Have the sewage container pumped out by a Thurston County certified sewage system pumper. Ask the sewage system pumper to complete a pumper slip, certifying the pumping. Remove or destroy the sewage container lid. Fill the sewage container with earth, sand or gravel. It is recommended that the pipes leading into and out of the sewage container be disconnected.

Review Process

Environmental Health staff will review the documents and may visit the site to confirm the process. Upon approval, a copy of the approved application will be mailed to the applicant and County records will be changed to reflect the abandonment of the on-site sewage system.

Note: If the abandonment is part of another Environmental Health review for the same property, and the reviews are being conducted concurrently, the abandonment fee may be waived. Please reference the pending review application when submitting the on-site sewage system abandonment application.

I Still Have Questions…

The information in this bulletin is a general guideline of the procedures and rules. For additional information, speak with a staff member at the Permit Assistance Center. Contact information is listed below. You may also review all Thurston County Codes online on the County website referenced at the bottom of this page.

OVERVIEW PLAN

0 100 200 300 feet

SCALE: 1" = 100'-0"

NORTH

LANDSCAPE SPECIFICATIONS

1. Refer to details for additional information.
2. Chemically kill and remove from site all existing weeds and vegetation not shown to remain on plans.
3. Distribute imported sandy loam topsoil (approved by the Landscape Architect) in areas shown and at depths indicated for crowning and berming of landscape areas, and backfill of retaining walls (if required). Dotted lines indicate 1' contour intervals. All landscape areas shall receive topsoil, whether indicated on plans or not, so that finish grades of all shrub beds shall be 2" below tops of adjacent curbs and pavement, and lawn areas shall be 1/2" below tops of adjacent curbs and pavement. Structural fill areas: Any landscape areas occurring within structural fill zones shall have said structural fill materials excavated to a depth of 12" below finish grades in shrub areas and 6" below grade in lawn areas, and replaced with specified topsoil. Dispose of excavated material off site.
4. Fine grade all landscape beds prior to planting operations.
5. No plant substitutions shall be permitted without prior approval of Landscape Architect/Owner.
6. All plants shall conform to the latest edition of the American Standard for Nursery Stock.
7. All plant materials and plant locations shall be approved by the Landscape Architect prior to installation.
8. Root barrier shall be incorporated adjacent and parallel to paving, curb and sidewalk, a minimum of 15 linear feet (7.5' on either side of trunk), 24" deep, where any tree is within 8' of paving, curb or sidewalk. Root barrier shall be DeepRoot UB-24 as available from Ewing Irrigation Products, 2901 S Tacoma Way, Tacoma, WA 98409 (253) 476-9530 or approved equal.
9. Soil amendment for soil preparation and planting backfill shall be a screened 5/8" minus nitrified wood residual compost equal to:
   A. "Silver Springs Top Grade Compost" brand compost as available from Corliss Resources Lake Tapps, WA (253) 279-9102.
   B. "Cedar Grove Compost" brand compost as available from Cedar Grove Compost, Maple Valley, WA (877) 764-5748.
   C. PREP/LRI compost as available from Randles Sand and Gravel, Inc., Puyallup, WA (253) 537-6828.
10. Soil Preparation - (all landscape areas). Spread 9 c.y. of specified soil amendment per 1000 s.f. (approx. 3" depth) of area. Spread 100 lbs./1000 s.f. of dolomite lime (in lawn areas only), 150 lbs./1000 s.f. of Agricultural Gypsum and 15 lbs./1000 s.f. of 16-8-8 commercial fertilizer over soil amendment. Roto-till all of the above to a 6"-8" depth and grade smooth, compacting as required and removing all rocks, clods and debris.
11. Lawn areas (seed or sod refer to plans) shall consist of one of the following turf types:

60% Turf-Type Perennial Rye Grass Varieties	60% Turf-Type Perennial Rye Grass Varieties
20% Bluegrass	40% Turf-Type Fescue
20% Hard Fescue	

12. Seed and sod shall be equal to that as grown by Country Green Turf Farms; Olympia, WA or JB Instant Lawn, Redmond, WA. Seed shall be applied at 7 lbs/1000 s.f. and include 10 lbs./1000 s.f. of United Horticulture 15-5-10 fertilizer in all lawn areas.
13. All trees in lawn areas shall be planted in a 3' diameter circle of bed mulch.

LANDSCAPE SPECIFICATIONS, CONT'D

14. Backfill mix for all plants shall be a blend of 1/3 existing site soil, 1/3 coarse sand, and 1/3 soil amendment specified in No. 9.
15. Apply Osmocote 18-6-12, 9 month slow release fertilizer over the surface of all plant pits at the following rates:

Trees Over 10' Height	2 Cups	Trees Under 10' Height:	1 Cup
All Shrubs Except 1 Gallons:	1/2 Cup	1 Gallon Plants:	1/4 Cup
Ground Covers:	1/4 Cup		

16. Fertilizer tablets for all plants shall be Agriform (20-10-5) 21 gram or 10 gram tablets distributed as follows: All trees: 4-21 gram tablets, all shrubs (except 1 gallons): 3-21 gram tablets, all 1 gallons: 1-21 gram tablet, all 2-1/4" and 4" pot ground covers: 1-10 gram tablet each. Set tablets directly next to rootball.
17. All shrub and ground cover beds shall receive a 3" depth (9 c.y. per 1000 s.f.) of "Fine Grind" hem/fir bark mulch as top dressing.
18. Apply a granular pre-emergent herbicide to all shrub and groundcover beds at the conclusion of the maintenance period. Do not use Casaron or Norasac Brands.
19. All work shall be performed to the satisfaction of the Landscape Architect/Owner.
20. All plants shall be guaranteed for one full year from date of project acceptance. All replaced plants shall be re-guaranteed. All replacements shall be made within 21 days of receiving written notice from the Owner. Contractor shall not be responsible for plants dying due to Owner neglect or vandalism, after the maintenance period.
21. Plant list quantities are shown for reference only. Contractor is responsible for verifying all quantities in list with actual plan call-outs, and installing plantings per the landscape plan. Groundcover and/or mass shrub quantities shall be adjusted as required for field conditions at the specified spacing.
22. Final inspection shall occur at the conclusion of a 60-day maintenance & plant establishment period. Maintenance period shall commence upon completion of all landscape installation activities and shall include the following:
   A. Mow lawns once per week.
   B. Remove all weeds over 1" in height.
   C. Replace dead or unhealthy plants.
   D. Ensure proper function of irrigation system.
   E. Ensure adequate moisture is delivered to all landscape beds including non-irrigated areas.
   F. Fertilize all lawns at conclusion of maintenance and plant establishment period.

IRRIGATION SHEET NOTES (ALL SHEETS)

1. SEE DETAILS AND SPECIFICATIONS FOR ADDITIONAL INFORMATION.
2. PLAN IS DIAGRAMMATIC. ALL PIPING, LATERALS, AND WIRE TO BE LOCATED IN BED OR LAWN AREAS WHERE APPROPRIATE.
3. PIPE SIZES ARE TO REMAIN CONSTANT BETWEEN PIPE SIZE CALL-OUTS. PIPES ARE LABELED TO SMALLEST PIPE SIZE ONLY (¾").
4. ALL IRRIGATION HEADS LOCATED IN LAWN AREAS SHALL BE 4" POP-UPS AND HEADS IN SHRUB AREAS SHALL BE 12" POP-UPS.
5. ALL DRIP TUBING SHALL BE INSTALLED BELOW THE FINISH SOIL GRADE UNLESS NOTED OTHERWISE. INSTALL TUBING AT A CONSISTENT DEPTH OF 2" BELOW TOP OF TOPSOIL.
6. ALL PIPES AND SLEEVES UNDER PAVED AREAS SHALL BE 24" DEEP. ALL MAINLINE SHALL BE 18" DEEP IN ALL UNPAVED AREAS, 24" IN PAVED ARES. ALL LATERALS SHALL BE 12" DEEP IN ALL UNPAVED AREAS AND 24" DEEP IN PAVED AREAS.
7. LOCATE ALL MAINLINES WITHIN THE PROJECT LIMITS. INSTALL #14-AWG DIRECT BURIAL LOW VOLTAGE WIRE ALONG MAINLINE; TAPE AND BUNDLE WIRE EVER 20' FT. PROVIDE RED COLOR WIRE FOR SIGNAL AND WHITE COLOR WIRE FOR COMMON. PROVIDE A MINIMUM OF ONE SPARE WIRE FOR EVERY 10 VALVES FOR A MAXIMUM OF FIVE SPARE WIRES.
8. ALL WORK SHALL BE PERFORMED TO THE SATISFACTION OF THE LANDSCAPE ARCHITECT/OWNER.

3 QUICK COUPLING VALVE IN BOX

1 1/2" = 1'-0" P-RE-WIL2-02

4 POP-UP SPRINKLER HEAD

N.T.S. P-RE-WIL2-07

NOTE: ALL WIRES TO BE INSTALLED AS PER LOCAL CODES. NO "IN-LINE" WIRE SPLICES ALLOWED. TAPE AND BUNDLE WIRES EVERY 20 FEET. PROVIDE EXPANSION COILS AT EACH VALVE - WRAPPING WIRE AROUND 1/2" PIPE 15 TIMES. ALL THREADED CONNECTIONS SHALL BE MADE WITH TEFLON TAPE.

5 ELECTRONIC CONTROL VALVE

1" = 1'-0" P-RE-WIL2-20

6 MASTER CONTROL VALVE

1 1/2" = 1'-0" P-RE-WIL2-12

7 TURF ROTOR MARLEX ASSEMBLY

3" = 1'-0" P-RE-WIL2-24

IRRIGATION SPECIFICATIONS

1. THIS PLAN IS DIAGRAMMATIC; ALL PIPING, VALVES, ETC. SHALL BE INSTALLED IN SHRUB BEDS WHERE POSSIBLE AND SHALL FOLLOW THE PLAN AS CLOSE AS IS PRACTICAL.
2. LOCATE ALL MAINLINES WITHIN THE PROJECT LIMITS.
3. PIPE SIZES ARE CONSTANT BETWEEN PIPE SIZE CALL-OUTS. ALL LATERIAL PIPES SHALL BE INSTALLED AT 12" DEPTH AND 24" DEPTH UNDER PAVED AREAS. MAIINLINE PIPE SHALL BE INSTALLED AT 18" BELOW GRADE AND 24" BELOW PAVED AREAS.
4. REFER TO DETAILS FOR ADDITIONAL INFORMATION.
5. ALL PIPING AND WIRING UNDER PAVED AREAS SHALL BE HOUSED IN CLASS 200 PVC SLEEVES INSTALLED AT A 24" DEPTH. SIZE SLEEVES AS NEEDED TO ACCOMMODATE PIPE AND WIRES, UNLESS OTHERWISE SPECIFIED ON DRAWING.
6. CONTRACTOR SHALL MAKE FIELD ADJUSTMENTS AS NEEDED TO OBTAIN FULL COVERAGE. LANDSCAPE ARCHITECT RESERVES THE RIGHT TO MAKE NOZZLE CHANGES AS NEEDED AT NO ADDITIONAL COST. ADJUST HEAD POSITIONS AND ADD OR DELETE HEADS AS NEEDED DEPENDING ON ACTUAL FIELD CONDITIONS.
7. ALL MANUAL, GATE AND ELECTRICAL VALVES AND OTHER UNDERGROUND EQUIPMENT SHALL BE HOUSED IN NELSON, AMETEK OR EQUAL RECTANGULAR VALVE BOXES.
8. NO IN-LINE WIRE SPLICES ALLOWED. SUPPLY VALVE BOXES AT ALL ELECTRICAL JUNCTIONS. TAPE AND BUNDLE WIRES EVERY 25 LINEAR FEET.
9. CONTRACTOR IS RESPONSIBLE FOR COMPLETE SYSTEM DRAINAGE. INSTALL MANUAL DRAINS AT ALL MAINLINE LOW POINT(S) AND WHERE INDICATED ON PLAN. CONTRACTOR SHALL PROVIDE ADJUSTABLE CHECK VALVES ON ANY IRRIGATION HEAD THAT EXPERIENCES LOW HEAD DRAINAGE.
10. ALL THREADED PIPE CONNECTIONS SHALL BE MADE USING TEFLON TAPE WRAPPED AT LEAST THREE TIMES AROUND PIPE THREADS.
11. ALL GATE AND ELECTRIC VALVES SHALL BE INSTALLED WITH UNIONS ON THE DOWNSTREAM END OF THE VALVE (REFER TO DETAILS).
12. ALL PIPE SHALL HAVE A FIRM UNIFORM BEARING FOR THE ENTIRE LENGTH OF EACH LINE, FREE OF ROCKS OR DEBRIS. ALL TRENCHES CONTAINING PIPE AND/OR WIRES SHALL BE BACKFILLED WITH CLEAN TOPSOIL, FREE OF ALL LUMBER, RUBBISH AND ROCKS OVER 1" IN SIZE, OR CLEAN SAND IF CLEAN TOPSOIL IS NOT AVAILABLE.
13. CONTRACTOR SHALL PROVIDE OWNER WITH ONE SET OF AS-BUILT RECORD DRAWINGS SHOWING EXACT ACTUAL LOCATIONS OF ALL SPRINKLER EQUIPMENT. CONTRACTOR SHALL ORIENT OWNER WITH COMPLETE SYSTEM AND CONTROLLER OPERATIONS, AND WINTERIZATION PROCEDURES.
14. CONTRACTOR SHALL SUPPLY AND INSTALL ALL EQUIPMENT SHOWN ON THE PLANS AND INDICATED IN THE SPECIFICATIONS TO ACHIEVE PROPER OPERATION OF SAID EQUIPMENT. ALL EQUIPMENT INSTALLATIONS, ELECTRICAL AND PLUMBING CONNECTIONS SHALL BE IN CONFORMANCE WITH ALL APPLICABLE CODES AND ORDINANCES, THESE SPECIFICATIONS, AND THE MANUFACTURERS RECOMMENDATIONS WHETHER INDICATED ON THE DRAWINGS OR NOT.
15. CONTRACTOR SHALL INCLUDE IN HIS BID ONE FALL WINTERIZATION AND ONE SPRING ACTIVATION OF IRRIGATION SYSTEM. THESE ACTIVITIES SHALL BE INCLUDED AS PART OF OWNER ORIENTATION PROCEDURES. ANY DAMAGE TO THE IRRIGATION SYSTEM OR THE LANDSCAPE AS A RESULT OF FAILURE TO COMPLY WITH THESE REQUIREMENTS SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR.
16. CONTRACTOR SHALL GUARANTEE IN WRITING ON HIS COMPANY LETTERHEAD ALL MATERIALS AND WORKMANSHIP FOR A PERIOD OF ONE FULL YEAR FOLLOWING ACCEPTANCE OF SYSTEM INSTALLATION.
17. BACKFLOW PREVENTOR SHALL BE INSPECTED AND TESTED BY A CERTIFIED BACKFLOW DEVICE INSPECTOR. PROVIDE OWNER WITH ONE COPY OF APPROVAL CERTIFICATE.

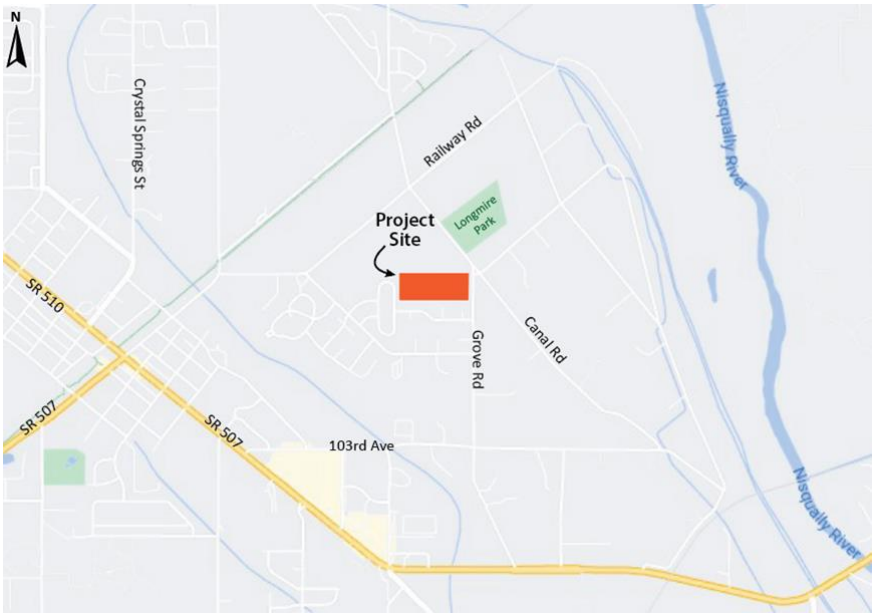
1 Introduction

1.1 Project Overview

Yelm Property Development, LLC is proposing to construct a 75-lot single-family subdivision in Yelm, Washington. **Figure 1** illustrates the site vicinity and the transportation network serving the project area.

Figure 1. Site Vicinity Map



1.2 Study Context

A Traffic Scoping Analysis was prepared and submitted to the City of Yelm on April 10, 2023 which outlined the trip generation and distribution/assignment assumptions. This report has been prepared to provide the necessary traffic analysis and project information for the City of Yelm to use in reviewing the development proposal. The report describes the existing and forecasted operation of the following intersections:

- Railway Road SE at Canal Rd SE
- Crystal Springs St/Edwards Street at Coates St SE
- 1st Street NE/NW Rhoton Road at Railway Road
- Railway Road at Middle Street NW
- Stevens Street at 1st Street NE
- 100th Way SE at Grove Road SE
- 103rd Ave SE at Grove Road SE
- Site Driveway at Grove Road SE
- Yelm Avenue at Grove Road SE

Operational analysis has been prepared for existing 2024 PM peak hour conditions and forecasted 2025 PM peak hour conditions with and without completion of the development.

2 Project Description

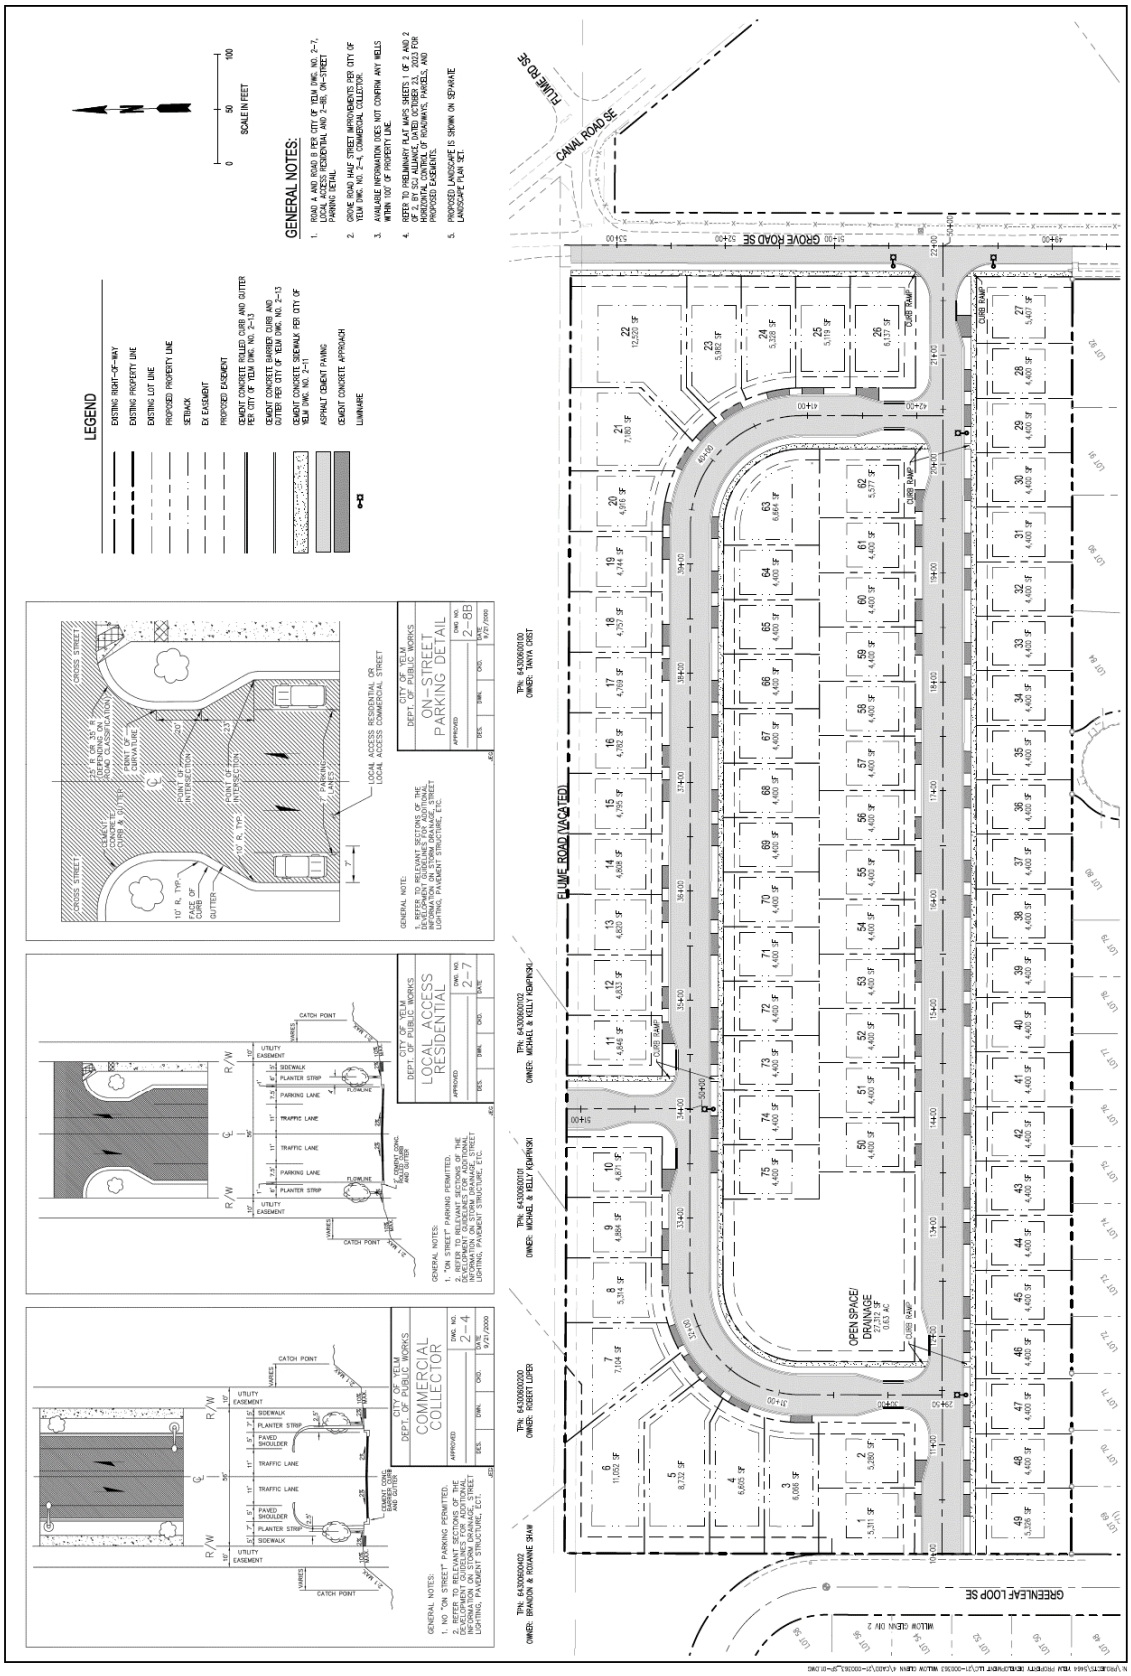
2.1 Development Proposal

The proposed Willow Glenn IV project will redevelop an existing 12.53-acre homesite as a new 75-lot single-family residential plat. The site is located at 9819 Grove Road SE within the City of Yelm urban growth boundary. The site has three existing residential structures and associated outbuildings (shop, garage, etc.) that will be removed. The site is also currently utilized by Yelm Property Development, LLC, and all business operations (structures and equipment) will be removed and or relocated.

Access to the project will be provided by one full access driveway on Grove Road. An additional access is proposed along Greenleaf Loop SE, which is expected to be used for emergency vehicles only. The site is also being designed to allow for a future connection to Canal Road SE to the north. The project is anticipated to open in 2025.

The preliminary site plan is provided on **Figure 2**.

Figure 2. Preliminary Site Plan



3 Existing Conditions

3.1 Area Land Uses

The *Willow Glenn IV* project will be located at 9819 Grove Road SE in Yelm, WA. The site has three existing residential structures and associated outbuildings (shop, garage, etc.) that will be removed. The site is also currently utilized by Yelm Property Development, LLC and all business operations (structures and equipment) will be removed and or relocated. The adjacent land uses are primarily residential. Longmire Community Park is located to the north and Fort Stevens Elementary School is located to the south.

3.2 Roadway Inventory

3.2.1 Grove Road

Grove Road is classified by the City of Yelm as commercial collector. In the project vicinity, Grove Road is a two-lane roadway providing one travel lane in each direction. This roadway has a posted speed limit of 35 mph.

3.2.2 Canal Road

Canal Road is classified by the City of Yelm as commercial collector. Canal Road is a two-lane roadway providing one travel lane in each direction and has a posted speed limit of 35 mph.

3.2.3 Railway Road SE

Railway Road SE is classified by the City of Yelm as neighborhood collector. This roadway provides one travel lane in each direction with a speed limit of 25 mph.

3.2.4 Middle Road SE

Middle Road SE is classified by the City of Yelm as neighborhood collector. Middle Road SE is a two-lane roadway providing one travel lane in each direction and has a posted speed limit of 25 mph.

3.2.5 100th Way SE

100th Way SE is classified by the City of Yelm as local access residential. This roadway provides one travel lane in each direction with a speed limit of 25 mph.

A summary of the existing intersection channelization and control type for each of the study intersections is provided in **Figure 3.**

3.3 Traffic Volume Data

Traffic Count Consultants, TC2, a transportation data collection service, provided evening peak period turning movement counts. The counts were collected between 4:00 and 6:00 PM for the PM peak period at the following locations:

- Railway Road SE at Canal Rd SE
- 1st Street NE/NW Rhoton Road at Railway Road
- Stevens Street at 1st Street NE

- 100th Way SE at Grove Road SE
- 103rd Avenue SE at Grove Road SE

For the intersection of Crystal Springs St/Edwards Street at Coates Street SE, the counts were collected over a four-hour period between 2:00 and 6:00 PM to capture the school traffic peak as well as the surrounding roadway network peak. The highest hour in the PM peak period, at this location, occurred during the school peak and has been used for the intersection analysis.

The intersection of Railway Road SE at Middle Road SE is included as a study intersection but was not counted. Given the traffic volume collection at both Railway Road SE at Canal Rd SE and 1st Street NE/NW Rhoton Road at Railway Road the turning movement volumes at Railway Road SE at Middle Road SE were able to be calculated to maintain balance between the two endpoint counts.

After an initial review of the TIA the City has asked to also include the intersection of Yelm Avenue (SR 507) at Grove Road. The City collected traffic counts across the city in January of 2024 which included this location and has provided this count for use in the TIA.

The existing 2024 traffic volumes for the study intersections for the PM peak hour are presented in **Figure 4**. The turning movement count diagrams and daily count data are provided in **Appendix A.**

3.4 Crash History

The Washington Department of Transportation provides crash data for study area roadways. This data was collected over the five-year span between January 1, 2019 and December 31, 2023. A crash frequency rate per Millions of Entering Vehicles (MEV) was calculated for the study intersections based on the following formula:

$$\text{Crash Rate} = \frac{1{,}000{,}000 \times \text{Total Crashes}}{365 \times \text{Number of Years} \times \text{Average Daily Entering Traffic}}$$

The average daily traffic entering the study intersection was estimated by adding the entering PM peak hour turning movements and multiplying by a factor of 10. We have summarized the crash data for the study intersections in **Table 1**.

Table 1. Existing Crash Severity by Study Intersection

	Intersection	Total Daily Entering Traffic	Total Number of Reported Crashes	Number of Injury Crashes	Average crashes per Year	Crashes per MEV
1	Railway Road SE at Canal Rd SE	3,340	3	1	0.6	0.49
2	Crystal Springs St/Edwards Street at Coates St SE	8,270	9	2	1.8	0.60
3	1st Street NE/NW Rhoton Road at Railway Road	2,000	2	0	0.4	0.55
4	Railway Road at Middle Street NW	1,360	2	0	0.4	0.81
5	Stevens Street at 1st Street NE	10,670	11	6	2.2	0.56
6	100th Way SE at Grove Road SE	3,870	0	0	0	0.00
7	103rd Avenue SE at Grove Road SE	7,650	13	3	2.6	0.93
8	Yelm Avenue SE at Grove Road SE	12,670	10	4	2.0	0.43

None of the study area intersections presented a crash rate greater than 1.0 crashes per million entering vehicles. Three of the 50 reported crashes were classified as a serious injury crash and zero were classified as fatal. The serious injury crashes are described below:

- A serious injury crash was reported at 6:30 pm on February 21, 2021 at the intersection of 103rd Avenue SE at Grove Road SE. The crash involved two vehicles, resulting in one serious injury. One vehicle was traveling straight heading eastbound and the other vehicle was stopped at the stop sign heading westbound. The crash cause was reported as the eastbound vehicle colliding with the westbound vehicle due to the driver being apparently ill.

- A serious injury crash was reported at 3:18 pm on May 16, 2021 at the intersection of Yelm Avenue (SR 507) at Grove Road SE. The crash involved two vehicles, resulting in one serious injury. One vehicle was travelling south on Grove Road and the other westbound on Yelm Avenue. The vehicle on Grove Road was attempting to make a right turn onto Yelm Avenue and was struck by the second vehicle. The crash cause was reported as the Grove Road vehicle not granting RW to the Yelm Avenue vehicle and was flagged as an angle crash.
- A serious injury crash was reported at 6:49 pm on September 28, 2021 at the intersection of Yelm Avenue (SR 507) at Grove Road SE. The crash involved two vehicles, resulting in one serious injury. One vehicle was travelling south on Grove Road and the other westbound on Yelm Avenue. The vehicle on Grove Road was attempting to make a left turn onto Yelm Avenue and was struck by the second vehicle. The crash cause was reported as the Grove Road vehicle not granting RW to the Yelm Avenue vehicle and was flagged as an angle crash.

3.5 Transit and Non-Motorized Facilities

Intercity Transit currently provides transit service in the City of Yelm, via transit route 94, offering connections to Tumwater, Olympia, and Lacey. This route includes several stops along 103rd Avenue and Yelm Avenue. The closest transit stop is located approximately half mile south of the project site along 103rd Avenue.

In the project vicinity, sidewalks are currently only provided along portions of Grove Road SE and 100th Way SE. There are currently no bicycle lanes provided along the roadways within the project vicinity.

4 Project Traffic Characteristics

4.1 Site-Generated Traffic Volumes

The two project-related characteristics having the most effect on area traffic conditions are peak hour trip generation and the directional distribution of traffic volumes on the surrounding roadway network. These are discussed in the following paragraphs.

Site-Generated Traffic Volumes

Vehicle trip generation was calculated using the trip generation rates contained in the 11th edition of the Trip Generation Manual by the *Institute of Transportation Engineers (ITE)*. Single-Family Detached Housing (land use code 210) has been used to calculate the trip generation. For this analysis, the "fitted-curve" equation was used to estimate trips in preference to using the average trip rate as this approach was recommended by ITE.

The trip generation rates used for the PM peak hour trip are shown in **Table 2.**

Table 2. ITE Trip Generation Rates
Single-Family Detached Housing (LUC 210)

Time Period	Unit	Trip Rate	Enter %	Exit %
AM Peak Hour	Dwelling Units	0.76	26%	74%
PM Peak Hour	Dwelling Units	1.01	63%	37%
Daily	Dwelling Units	10.33	50%	50%

The total trip generation expected from this project is calculated by applying the unit measure for each land use category to the appropriate trip generation rate. The trip generation calculations are shown in **Table 3**.

Table 3. Project Trip Generation

Time Period	Units	Total Trips	Enter	Exit
AM Peak Hour	75	57	15	42
PM Peak Hour	75	76	48	28
Daily	75	774	387	387

4.2 Site Traffic Distribution and Assignment

For this study, the directional distribution of traffic to and from the proposed project was estimated using the regional transportation model. The Thurston Regional Planning Council (TRPC) created the area-wide transportation model with cooperation from local jurisdictions within the county. The model, developed using the Emme/4 software package, has been calibrated to represent the existing vehicle travel patterns throughout the entire county.

The *Willow Glenn IV* project is located within TAZ 711 of the regional transportation model. A distribution analysis was performed for this project by conducting a "Select Zone Analysis" for this TAZ. This feature of the Emme/4 software package allows all of the traffic into and out of a particular zone to be isolated and shown separately from the rest of the traffic on the network. This graphically shows the percentage of vehicles currently using each of the available routes into and out of the area. From this information, regional distribution percentages were calculated for future traffic traveling to and from the Willow Glenn IV project.

The regional traffic distribution percentages and site traffic distribution for the PM peak hour are shown on **Figure 5.**

5 Future Traffic Conditions

5.1 Roadway Network Improvements

The City of Yelm *Six-Year Transportation Improvement Plan* (TIP) and The City of Yelm 2009 *Transportation Plan* were reviewed for roadway improvement projects located within the project vicinity. The following roadway improvement projects were identified:

- Y3 SR 510 to SR 507 (SR 510 Yelm Loop)– Similar to the Y2 south Yelm Loop, the north loop provides a primary alternative for traffic traveling through and around the City Center near Canal Road. Construction of this facility would accommodate traffic associated with the industrial center, including truck traffic generated by this type of development. This project is currently in the design phase with an uncertain opening year.
- Y4C 103rd Avenue between Creek Street and SR 510 Yelm Loop - 103rd Avenue is improved from SR 507 (Yelm Avenue East) to Creek Street. From Creek Street, through the intersection of Grove Road, and to the new intersection of the SR 510 Yelm Loop 103rd Avenue are two resurfaced drive lanes with gravel shoulders. Reconstruction includes two drive lanes with a center turn lane where needed, paved shoulders, curb & gutter, planter strip with street trees and sidewalks for approximately 2800 linear feet. This portion of the "mini-loop' would complete access from the east end of the City to the west end. Fully improved street facilities provide more streamlined and safe traffic movements, and bike and pedestrian access.
- Y10 N.P. Road (Reconstruction) –N.P. Road serves the Yelm Industrial Area as well as providing the primary connection from the proposed SR 510 Yelm Loop main intersection (roundabout) at Wilkensen Road to the City Center. N.P. Road is not currently improved to City standards and does not provide for the turning movements of industrial traffic.
- Y13 Rhoton Road Improvements – 1st Street to Canal Road - Reconstruct and widen roadway to collector standard. Rhoton Road is a main connection from the SR 510 Yelm Loop to the City's Industrial area and downtown.

These projects are expected to provide a benefit to the study area, however none of these projects are expected to be constructed before the completion of the *Willow Glenn IV* project and were not accounted for in the intersection analysis.

5.2 Future Traffic Volumes

Traffic volume forecasts were prepared for PM peak hour conditions for the 2025 project opening year. The future traffic volume forecast includes non-specific background traffic growth, pipeline development traffic and estimated traffic generated by the proposed *Willow Glenn IV* project.

It is anticipated that background growth will occur within the study area and affect traffic volumes. To calculate a background growth rate historic traffic counts on the SR 507 for 2014 and 2018 were identified. An annualized growth rate between the two data points was determined which equates to 1 percent per year. A 1.0 percent annual growth rate (non-compounded) was applied to existing volumes.

The pipeline development projects identified within the vicinity of the *Willow Glenn IV* project include the following:

- The Hutch
- The Summit at Thompson Creek
- Samanth Ridge
- Habitat for Humanity
- Liberty Grove
- 407 E Yelm Coffee
- Country Meadows Estates I
- Country Meadow Estates II
- C&E Commercial
- Armor Storage

The projected 2025 traffic volumes without the *Willow Glenn IV* project are shown on **Figure 6.** The projected 2025 traffic volumes with the *Willow Glenn IV* project are shown on **Figure 7.**

The traffic volume calculations for the study intersections are included in **Appendix B**.

PM Peak Hour With Project

6 Traffic Operations Analysis

Traffic analyses were conducted to identify any deficiencies within the study area for the PM peak hour in the 2024 base year and the 2025 project opening year.

6.1 Level of Service

The acknowledged source for determining overall capacity for arterial segments and independent intersections is the current edition of the *Highway Capacity Manual* (HCM). Operations analyses were completed for the base year and projected 2025 PM peak hour traffic volume scenarios for all study intersections. The PM peak hour is the highest traffic flow period during the day in this area. This time period is typically selected for analysis as it reflects the greatest impact of a project on the areas roadway system.

Intersection analysis was performed using Synchro version 11, with the HCM6 output of the Synchro software. The Synchro software packages implement the methodologies described in the current HCM.

The City of Yelm identifies a Level of Service (LOS) C standard in all residential zones and LOS D standard for all commercial and light industrial zones.

6.1.1 Intersection Operations

For signalized intersections, the overall LOS grade represents the weighted average of all movements at the intersection. For intersections under minor street stop-sign control, the LOS of the most difficult movement (typically the minor street left turn) is typically used to represent the intersection level of service. The LOS/delay criteria for stop sign-controlled intersections are different than for signalized intersections because driver expectation is that a signalized intersection is designed to carry higher traffic volumes and experience greater delay. Table 4 summarizes the various levels of delay associated with varying LOS conditions.

Table 4. Level of Service Criteria for Intersections

Level of Service	Signalized Intersection Average Control Delay (seconds/vehicle)	Stop-Controlled Intersection Average Control Delay (seconds/vehicle)
A	≤ 10	≤ 10
B	> 10-20	> 10-15
C	> 20-35	> 15-25
D	> 35-55	> 25-35
E	> 55-80	> 35-50
F	> 80	> 50

6.2 Volume to Capacity Ratio

Another measure of the performance of an intersection is the “degree of traffic saturation” which is experienced. This is typically presented as a “volume to capacity” (v/c) ratio. Many factors affect the volume of traffic an intersection can accommodate during a specific time interval. These factors include the number of lanes, lane widths, the type of signal phasing, the number of parking maneuvers on the adjacent street, etc. Based on these factors, the intersection (or individual lane group) is determined to

have a total vehicle carrying capacity "c" for the analysis period. The analysis period volume "v" is compared to the calculated carrying capacity and presented as a ratio. If the v/c ratio is below 1.0, the demand volume is less than maximum capacity. If the v/c ratio is over 1.0, the demand volume exceeds the available capacity.

6.3 Intersection Analysis

The analysis was conducted for the following scenarios:

- Existing 2024 traffic volumes
- Projected 2025 background traffic volumes without the *Willow Glenn IV* project
- Projected 2025 traffic volumes with the *Willow Glenn IV* project

The operational analysis results of the study intersections for the PM peak hour are provided in **Table 5**. The LOS analysis worksheets are included in **Appendix C**.

Table 5. PM Peak Hour Intersection Level of Service

				Base Year 2024		2025 Without Project		2025 With Project	
	Intersection	Control Type	LOS Standard	LOS (delay)	Worst V/C Ratio	LOS (delay)	Worst V/C Ratio	LOS (delay)	Worst V/C Ratio
1	Railway Road SE at Canal Rd SE	AWSC[2]	C	A (8.1)	0.24	A (8.1)	0.24	A (8.3)	0.26
2	Crystal Springs St/Edwards Street at Coates St SE	TWSC[1]	D	C (16.9)	0.45	C (17.3)	0.46	C (18.0)	0.48

1-Two-Way-Stop-Control
2-All-Way-Stop-Control

6.3.1 Railway Road SE at Canal Rd SE

This is a four-leg intersection under all-way stop control. During the PM peak hour this intersection currently operates at LOS A. For the 2025 horizon without and with the project, the intersection is projected to remain at LOS A. This intersection is expected to operate within the City's LOS standard.

6.3.2 Crystal Springs St/Edwards Street at Coates St SE

This is a tee intersection with stop control for the eastbound approach. During the PM peak hour this intersection currently operates at LOS C. For the 2025 horizon year without and with the project, the intersection is projected to remain at LOS C. This intersection is expected to operate within the City's LOS standard.

6.3.3 1st Street NE/NW Rhoton Road at Railway Road

This is a tee intersection with stop control for the eastbound and westbound approaches. During the PM peak hour this intersection currently operates at LOS B and is projected to remain at LOS B for the 2025 horizon year without the project. With the addition of project traffic, this intersection is projected to operate at LOS C. This intersection is within the LOS standard.

6.3.4 Railway Road at Middle Street NW

This is a tee intersection with stop control for the westbound approach. During the PM peak hour this intersection currently operates at LOS A. For the 2025 horizon without and with the project, the intersection is projected to remain at LOS A. This intersection is expected to operate within the City's LOS standard.

6.3.5 Stevens Street at 1st Street NE

This is a four-leg intersection under all-way stop control. During the PM peak hour this intersection currently operates at LOS C and is projected to remain at LOS C for the 2025 horizon year without the project. With the addition of project traffic, this intersection is projected to operate at LOS D. This intersection is within the LOS standard.

6.3.6 100th Way SE at Grove Road SE

This is a tee intersection with stop control for the eastbound approach. During the PM peak hour this intersection currently operates at LOS A and is projected to remain at LOS A for the 2025 horizon year without the project. With the addition of project traffic, this intersection is projected to operate at LOS B. This intersection is within the LOS standard.

6.3.7 103rd Avenue SE at Grove Road SE

This is a four-leg intersection under all-way stop control. During the PM peak hour this intersection currently operates at LOS B. For the 2025 horizon year without and with the project, the intersection is projected to remain at LOS B. This intersection is expected to operate within the City's LOS standard.

6.3.8 Yelm Avenue (SR 507) at Grove Road SE

This is a three-leg intersection under two-way stop control for southbound Grove Road. During the PM peak hour this intersection currently operates at LOS C. For the 2025 horizon year without and with the project, the intersection is projected to remain at LOS C. This intersection is expected to operate within the City's LOS standard.

6.3.9 Site Driveway at Grove Road SE

This intersection will operate under stop control for the eastbound approach. For the 2025 horizon year with the project, the intersection is projected to operate at LOS A. This intersection is within the LOS standard.

7 Mitigation Measures

The proposed project is expected to add 76 PM peak hour vehicle trips to the existing street system at completion. The overall effect of the new trips will be negligible to the function and operations of the transportation network, as documented in this study.

However, the project will be responsible for the following mitigation measures:

7.1 Frontage Improvements

The *Willow Glenn IV* project will construct half street improvements along the project frontage on Grove Road SE.

7.2 City of Yelm Transportation Facilities Charge

The project developer will be required to pay a Transportation Facilities Charge in accordance with the City of Yelm impact fees. The City of Yelm collects traffic impacts fees based on PM peak hour trips generated by a proposed project. The fee will be calculated by the City of Yelm and is paid at time of building permit issuance.

The impact fee calculation for the proposed *Willow Glenn IV* project should consider the existing residential structures that will be removed as a result of the proposed project. The total units to be considered in the fee calculation should be 72 single family dwelling units, which generates 73 PM peak hour trips.

8 Summary and Conclusions

Yelm Property Development, LLC is proposing to construct the *Willow Glenn IV* residential subdivision in Yelm, Washington. The site is located at 9819 Grove Road SE within the City of Yelm urban growth boundary. The proposed project will redevelop the existing 12.53-acre homesite as a new 75-lot single-family residential plat. The existing structures on site will be removed.

Access to the project will be provided by one full access driveway on Grove Road. An additional access is proposed along Greenleaf Loop SE, which is expected to be used for emergency vehicles only. The site is also being designed to allow for a future connection to Canal Road SE to the north.

At full occupancy and operation, the project is estimated to generate approximately 76 trip ends during the PM peak hour. An evaluation of existing 2024 and project opening year (2025) conditions with and without project traffic was performed. All of the study intersections currently operate and are projected to operate within the City of Yelm level of service standard.

As part of the proposed project, half street improvements will be constructed along the project frontage on Grove Road SE. In addition, the project developer will be required to pay a Transportation Facilities Charge in accordance with the City of Yelm impact fees. The actual fee will be calculated by the City of Yelm and is paid at time of building permit issuance.

Review Comment Disposition Form

Project Title:	SR 507 – Willow Glenn IV TIA	Job Charge #:	
Reviewer (name & office) Sarah Bogue – Traffic Design Daniel Grimm – Traffic Design Date of Review Comments: 4/18/2024		Responses By: Date of Disposition:	

Comment No.	Sht or Pg.	Review Comment	Status Code	Designer's Response
1.	PDF p13	Please provide tables describing injury severity and collision type by intersection.	A	These additional tables will be prepared
2.	PDF p13	Were there any crashes involving pedestrians or cyclists? If so, please include a brief 1 sentence description of each collision.	C	~~No~~ Grove Road/507 did experience a pedestrian and bike crash. Table and description will be presented during the hearing. AK
3.	Synchro	Please use PHF of 1.0 for future scenarios at WSDOT facilities.	C	Noted. This will improve the projected performance of the intersection, Since the TIA currently projects performance within the City standard, this change will have no material affect for this analysis.
4.	GEN	Please verify that development will be constructed and fully occupied by 2025.	A	That is the expectation at this time.

1.	Pg 10	*Note for City: The Consultant uses the ITE fitted curve equation rather than the traditional ITE rate to calculate trips generated, which may not be the best fit for the size of the development. Additionally, we note that the trip generation does not provide any credits for existing use. However, in this case The Consultant's assumptions provide a more conservative trip generation overall, so we do not see this as a concern requiring change. Should the City wish, they could flag the potential credit for existing uses as part of the calculation of impact fees, if those uses were recently occupied.*
2.	Pg 11	*Note for City: Study intersections identified do not include any along SR 507/510, even though portions of project trips will certainly use this roadway, particularly for those heading to/from the east. The current distribution splits the trips such that no one intersection is overly impacted. As noted by The Consultant, this is consistent with what is shown in TRPC's travel demand model. For the most part, we are not concerned about the distribution and any adverse impacts to intersections along SR 510/507. However, in the case of SR 507 & Grove Rd there are sight distance and capacity limitations that would add additional delay and discomfort to any vehicles routing through this intersection to/from the site. Per the trip distribution, ~16 site generated trips will use this intersection. It may be advisable for the City to still require The Consultant to analyze this intersection to ensure project impacts, particularly to delay and safety, are properly accounted for. Should the City opt to require this, we recommend the following comment:* No intersections along SR 510/507 were included as study intersections for this analysis. In reviewing the trip distribution and likely routing of vehicles, this is largely reasonable, as no one intersection along SR 510/507 is anticipated to carry too much site generated traffic. However, due to the limited turning capacity and observed sight distance issues at the intersection of SR 507 & Grove Road, it is likely that the anticipated 16 site trips routing through this intersection will have a disproportionate impact on delay and safety. **It is recommended that the Consultant include the intersection of SR 507 & Grove Rd as an additional study intersection to better quantify the delay and safety impacts of vehicle trips routing to/from the East.**

	Location	Comment
3.	Pg 13	*Note for City: The Consultant derived growth rates for this analysis using pre-pandemic volumes (2014-2018), resulting in a 1% growth rate. Other developments we have reviewed for the City have shown a 4% growth rate in this area, which we have confirmed is reasonable with City Staff. Additionally, The Consultant assumed a 2025 opening year, which seems aggressive for the construction of 75 units considering we are already in 2024.* *All of that being said, they did include trips from 10 pipeline development projects, which provide a more refined view of trip growth and more than account for the more recent growth patterns of the City. We do not recommend any changes, as the final forecast they provide (with the baseline growth and pipeline projects) provides a conservative view of background traffic growth, even considering the 2025 opening year.*
4.	Appendix A	**Appendix A is missing TMC sheets for Railway Rd & Middle Rd SE; The Consultant should make sure these are included in the final submittal.**
5.	Pg 16; Appendix B	*Note for City: In rounding the Projected 2025 Traffic Volumes With Project, The Consultant rounded to the nearest 5, which means that they occasionally rounded down and removed project volume from the network when compared to the raw trip generation plus the baseline forecast. However, we don't anticipate this would impact the LOS outcomes, so no change is recommended.*

STATE OF WASHINGTON
DEPARTMENT OF ECOLOGY
Southwest Region Office
PO Box 47775, Olympia, WA 98504-7775 • 360-407-6300

February 14, 2024

Andrew Kollar, SEPA Contact
City of Yelm
Community Development Department
PO Box 479
Yelm, WA 98597

Dear Andrew Kollar:

Thank you for the opportunity to comment on the mitigated determination of nonsignificance for the Willow Glenn IV Project (2023.0188) located at 9819 Grove Road Southeast as proposed by Denny Balascio. The Department of Ecology (Ecology) reviewed the environmental checklist and has the following comment(s):

HAZARDOUS WASTE & TOXICS REDUCTION: Garret Peck (564) 669-0836

The applicant proposes to demolish an existing structure(s). In addition to any required asbestos abatement procedures, the applicant should ensure that any other potentially dangerous or hazardous materials present, such as PCB-containing lamp ballasts, fluorescent lamps, and wall thermostats containing mercury, are removed prior to demolition. It is important that these materials and wastes are removed and appropriately managed prior to demolition. It is equally important that demolition debris is also safely managed, especially if it contains painted wood or concrete, treated wood, or other possibly dangerous materials.

Please review the "Dangerous Waste Rules for Demolition, Construction, and Renovation Wastes," posted at Ecology's website, https://ecology.wa.gov/Regulations-Permits/Guidance-technical-assistance/Dangerous-waste-guidance/Common-dangerous-waste/Construction-and-demolition . The applicant may also contact Rob Rieck of Ecology's Hazardous Waste and Toxics Reduction Program at (360) 407-6751 for more information about safely handling dangerous wastes and demolition debris.

SOLID WASTE MANAGEMENT: Derek Rockett (360) 995-3176

All grading and filling of land must utilize only clean fill. All other materials may be considered solid waste and permit approval may be required from your local jurisdictional health department prior to filling. All removed debris resulting from this project must be disposed of at an approved site. Contact the local jurisdictional health department or Department of Ecology for proper management of these materials.

TOXICS CLEANUP: Thomas Middleton (360) 999-9594

If contamination is suspected, discovered, or occurs during the proposed SEPA action, testing of the potentially contaminated media must be conducted. If contamination of soil or groundwater is readily apparent, or is revealed by testing, Ecology must be notified. Contact the Environmental Report Tracking System Coordinator for the Southwest Regional Office (SWRO) at (360) 407-6300. For assistance and information about subsequent cleanup and to identify the type of testing that will be required, contact Thomas Middleton with the SWRO, Toxics Cleanup Program at the phone number provided above.

Ecology's comments are based upon information provided by the lead agency. As such, they may not constitute an exhaustive list of the various authorizations that must be obtained or legal requirements that must be fulfilled in order to carry out the proposed action.

If you have any questions or would like to respond to these comments, please contact the appropriate reviewing staff listed above.

Re: 2023.0992.SP0007

The Nisqually Indian Tribe's THPO has reviewed the notice of application that you provided for the above-named project and has no specific comments or concerns at this time. Please keep us informed if there are any Inadvertent Discoveries of Archaeological Resources/Human Burials.

Although the Nisqually Indian Tribe doesn't have any specific concerns at this time, we respect the traditional cultural knowledge of affected tribes and support their opinions on this matter as well.

Sincerely,

Brad Beach, THPO

Subject: [External]ORCAA Comment on SEPA# 202400437; File# 2023.0188
Attachments: 2023.0992.SP0007 WILLOW GLENN IV SEPA CHECKLIST.pdf

Good morning,

Olympic Region Clean Air Agency (ORCAA) recently reviewed a notice regarding the Willow Glenn IV proposal, located at 9819 Grove Road SE in Yelm, WA. The project proposes the demolition of all existing structures, including:

- One single-family residence (approx. 988 sf)
- Two mobile homes (approx. 1500 sf)
- One barn (approx. 3,456 sf)
- Four sheds (approx. 350 sf, 65 sf, 80 sf, 90 sf)
- One well house (approx. 70 sf)

Olympic Region Clean Air Agency (ORCAA) has the following comments for the applicant:

ORCAA regulations require an asbestos survey for all demolition projects. Demolition projects by definition also include renovations performed to load-bearing structural members on the current building as part of a remodel. Prior to any demolition project, the following must be completed:

- A good faith asbestos survey must be conducted on the structure by a certified Asbestos Hazardous Emergency Response Act (AHERA) building inspector;
- If asbestos is found during the survey, an ORCAA Asbestos Removal Notification must be completed and all asbestos containing material must be properly removed prior to the demolition; and,
- If the structure is 120 sq. ft. or greater, an ORCAA Demolition Notification must be submitted regardless of the results of the asbestos survey. There is a mandatory 14-day waiting period after ORCAA receives notification, so we recommend the applicant complete the Demolition Notification promptly after receiving the survey.

**These requirements are specific to ORCAA and are not synonymous with any city or county permitting jurisdiction requirements*
